

Interoperability between the UNFCCC Reporting Tool and the IPCC Inventory Software

IPCC TFI TSU

SB 58

June 2023

ipcc

INTERGOVERNMENTAL PANEL ON climate change

Outline

- ✓ Background
- ✓ What is interoperability and why is it important?
- ✓ UNFCCC and IPCC cooperation to achieve interoperability
- ✓ What can users expect to see in IPCC Inventory Software supporting interoperability?
- ✓ The road ahead

Background

- ✓ Beginning 31 December 2024, countries submit a **biennial transparency report (BTR)** consisting of a narrative document and reporting tables/ formats.
- ✓ Reporting must follow the **Modalities, Procedures and Guidelines (MPGs)** (decision 18/CMA.1).
- ✓ **Decision 5/CMA.3** mandates the UNFCCC to develop reporting tools for the electronic reporting of the tables and formats, specifically:
 - ✓ Common reporting tables (CRT) for GHG inventory (Annex I);
 - ✓ Common tabular formats (CTF) for tracking progress made in implementing/achieving NDCs (Annex 2);
 - ✓ CTF for financial, technology development and transfer and capacity-building support (Annex 3)
- ✓ Decision 5/CMA.3 requests the UNFCCC secretariat **to facilitate interoperability** between the reporting tools and the IPCC Inventory Software and invites the IPCC to participate in this effort.

Interoperability: What it is and why it is important?

Interoperability: “The ability of computer systems or software to exchange and make use of information” -Oxford Dictionary

- ✓ In practice, the goal is to enable a country to use the IPCC Inventory Software to estimate its GHG emissions and removals in accordance with the 2006 IPCC Guidelines and generate a file that could be received and read by the UNFCCC reporting tool for CRT to facilitate the country’s reporting to the Paris Agreement.
- ✓ Thereby, IPCC Inventory Software becomes a central component of a Party’s institutional arrangements to facilitate meeting UNFCCC national reporting obligations.

UNFCCC and IPCC cooperation to achieve interoperability

Step 1: Mapping between IPCC Inventory Software and CRT

1 User enters underlying data (e.g. AD and EF) into IPCC Inventory Software

Subdivision	Fuel	Consumption Unit	Consumption (Mass Volume or Energy Unit)	Conversion Factor (TJ/unit) (NCV)	Total consumption (TJ)
Unspecified	Peat	Gg	1	9.76	9.76
Total					9.76

2 IPCC Inventory Software calculates emissions

Subdivision	Fuel	Total consumption (TJ)	CO ₂ Emissions (Gg CO ₂)	CH ₄ Emissions (Gg CH ₄)	N ₂ O Emissions (Gg N ₂ O)
Unspecified	Peat	9.76	1.0456	0.00001	0.00001
Total					

TABLE 1.A(a) SECTORAL BACKGROUND DATA FOR ENERGY
Fuel combustion activities - sectoral approach
(Sheet 1 of 4)

3 AD, EFs and some parameters entered into cells of CRT

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	AGGREGATE ACTIVITY DATA		IMPLIED EMISSION FACTORS			EMISSIONS		
	Consumption (TJ)	NCV/GCV ⁽¹⁾	CO ₂ ⁽²⁾ (t/TJ)	CH ₄ ⁽³⁾ (kg/TJ)	N ₂ O ⁽⁴⁾ (kg/TJ)	CO ₂ ⁽⁵⁾ (kt)	CH ₄ ⁽⁶⁾ (kt)	N ₂ O ⁽⁷⁾ (kt)
Biomass ⁽¹⁰⁾								
<i>Drop-down list</i>								
1.A.1.a.i. Electricity generation								
Liquid fuels								
Solid fuels								
Gaseous fuels ⁽¹¹⁾								
Other fossil fuels ⁽¹²⁾								
Peat ⁽¹³⁾								
Biomass ⁽¹⁴⁾								

✓ For all categories, tiers and gases, map where they should appear in the UNFCCC CRT

✓ In some cases, this has required updates to the IPCC Inventory Software (e.g. 2019 Refinement, additional gases)

✓ Coordination with UNFCCC to ensure correct mapping

UNFCCC and IPCC cooperation to achieve interoperability

- Step 2: Cell-by-cell mapping between IPCC Inventory Software and CRT, implementing visualization of CRT in IPCC inventory Software

✓ For Sectoral / Background CRT, AD and emissions map from IPCC Inventory Software to CRT; IEF and summary tables calculated in CRT

✓ Additional explanatory information can be added in IPCC Inventory Software (e.g. documentation boxes, user/ Party comments, method/EF information, notation key explanations, including confidentiality)

TABLE I.A(a) SECTORAL BACKGROUND DATA FOR ENERGY		General Instructions for Column H				General Instructions for Column J				General Instructions for Column L					
Fossil fuel activities - sectoral approach (Sheet 2 of 4)		If Column C is "NO" then "NO" If Column C is "NO" AND Column H is 0 then "NE" In cells with "NE", clicking on dialogue window "NE" (see sheet open) In cells with "EX", clicking on dialogue window "EX" (see sheet open)				If Column C is "NO" then "NO" If Column C is "NO" AND Column J is 0 then "NE" In cells with "NE", clicking on dialogue window "NE" (see sheet open) In cells with "EX", clicking on dialogue window "EX" (see sheet open)				If Column C is "NO" then "NO" If Column C is "NO" AND Column L is 0 then "NE" In cells with "NE", clicking on dialogue window "NE" (see sheet open) In cells with "EX", clicking on dialogue window "EX" (see sheet open)					
GREENHOUSE GAS SOURCE AND SINK CATEGORIES	AGGREGATE ACTIVITY DATA	IMPLIED EMISSION FACTORS		EMISSIONS											
		CO ₂ (Gt)	CH ₄ (Gt)	CO ₂ (Gt)	CH ₄ (Gt)	CO ₂ (Gt)	CH ₄ (Gt)								
1.A.1 Manufacturing industries and construction	1.A.1.1 Iron and steel
	1.A.1.2 Non-ferrous metals
	1.A.1.3 Chemicals
	1.A.1.4 Pulp, paper and print
	1.A.1.5 Food processing, beverages and tobacco
	1.A.1.6 Textiles, leather and other non-metallic mineral products
	1.A.1.7 Manufacturing of machinery

What can users expect for version with interoperability?

Step 1. User calculates annual/ time series of GHG Inventory in IPCC Inventory Software

- ✓ Interface will look the same as current version, with some updated categories/ gases to facilitate interoperability.

Step 2. Access CRT interface in the Main Menu of IPCC Inventory Software

- Create / name the CRT data set to be generated
- Select the year(s) for export to CRT
- Feed worksheet data into CRT visualized in IPCC Inventory Software

Note: Some images may be updated as we continue to finalize interoperability, taking into account comments received.

What can users expect for version with interoperability?

Step 3. Review visualized CRTs

1.D.2. Multilateral operations (3)	299,900				15,403.292165	1.5505	
Additional information							
Fuel consumption	Domestic distribution (%) (a)	International distribution (%) (a)					
Aviation							
Marine							

Legend

(1) Including LNG for international navigation.

(2) Include information in the documentation box on which fuels are included and provide a reference to the section in the NID where further information is provided.

(3) Parties may choose whether to report or not report AD and IEFs for multilateral operations, consistently with the principle of confidentiality stated in the MFGs (chapter II). In any case, Parties should report the emissions from multilateral operations, where available, under memo items in the summary tables and in the sectoral report table for energy.

Documentation box

Parties should provide a detailed description of the fuel combustion subsector, including international aviation and international navigation, in the relevant section of chapter 3 ("Energy" (CRT subsector 1.A)) of the NID. Use this documentation box to provide references to relevant sections of the NID, if any additional information is required.

1.D.1

1.D.2

IPCC Inventory Software notes

Orange cells above that contain no information (i.e. are blank) will be calculated automatically by the UNFCCC reporting tool. No action by the user is required.

Note that in CRT Reporting, it is not necessary to enter data for some fuel types used as international bunkers. The IPCC Inventory software may include additional fuels for bunkers not included here.

Please report in the "Documentation Box" the other liquid fuels included in the estimates reported in

Identify explanations needed (e.g. "NE" / documentation boxes)

Checks done for all tables / all years

Review Values

Guidance available (CRT footnotes, and IPCC Inventory Software)

What can users expect for version with interoperability?

Step 4. Finalize information for export to CRT

Legend

IPCC Inventory Software notes

Debug

• Minimum level of aggregation is needed to protect confidential business and military information, where it would identify particular entity's/entities' confidential data.

• To implement the second note, users can mark values mapped in this CRT with the notation key "C". Note that Totals calculated in orange cells won't change because of the input of "C".

• A Party may collapse rows below 1.A.1.b and 1.A.1.c up to the 1.A.1.b and 1.A.1.c level when: all the data must be aggregated to protect confidential business and military information; and this data can be used to identify particular entity(ies). The rows will be expanded for display purposes. An explanation of why this has been applied will be provided in the documentation box.

• Orange cells above that contain no information (i.e. are blank) will be calculated automatically by the UNFCCC reporting tool. No action by the user is required.

• In "1.A.1.c.i - Manufacture of solid fuels - Solid fuels - Consumption" cell, activity data from worksheet "Fuel consumption Data" of the relevant category in the IPCC Inventory Software are mapped, as are some process inputs from coke production in category 2.C.1. Users that estimate GHG emissions from coke production in iron and steel should ensure the energy content (TJ) of all process inputs from category 2.C.1 are included. If necessary, the user should revise the activity data to include the total fuel consumed for the category, including the energy content of all process inputs to coke production in iron and steel.

This Guide was prepared by the Technical Support Unit (TSU) of the IPCC Task Force on National Greenhouse Gas Inventories (TFI) to help users of the IPCC Inventory Software. It has not been subject to formal IPCC review procedures.

- Description of functionalities in IPCC Inventory Software to prepare data for generation of JSON file for use by UNFCCC electronic reporting tool.

The Road Ahead

- ✓ Multiple releases between now and COP28, and beyond to June 2024, are expected.
- ✓ The best way for Parties to prepare for reporting under the ETF, is to start today.
- ✓ Learn more about IPCC Inventory Software and download the latest version:
<https://www.ipcc-nggip.iges.or.jp/software/index.html>
- ✓ Please continue to support us through testing and reporting your findings to ipcc-software@iges.or.jp

In the 7th IPCC assessment cycle (from end of July 2023) the plan may be subject to changes, depending on consideration by the IPCC and the new Bureau of the Task Force on National Greenhouse Gas Inventories
