

**United Nations**  
Climate Change  
Adaptation  
Committee

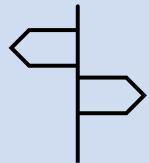

# Adaptation Committee

Identifying information on indicators  
reported by Parties in their national  
reports and communications in the  
context of the work referred to in  
paragraph 45 of decision 2/CMA.5

# Who is the Adaptation Committee?

Parties established **the Adaptation Committee (AC)** in 2010 as the principal body on Adaptation to promote the implementation of enhanced action on adaptation in a coherent manner under the Convention and the Paris Agreement.

The AC fulfils five core functions:

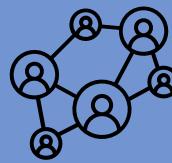

Providing **technical support** and **guidance** to the Parties

**Sharing relevant information**, knowledge, experience and good practices.

*E.g. the ongoing work on the State of Adaptation: Countries Profiles*

Promoting **synergy** and **strengthening engagement** with national, regional and international organizations, centres and networks

**Considering information communicated by Parties** on their monitoring & review of adaptation actions and support

**Providing information and recommendations** for consideration by Parties

# I. Introduction and background

---

- The SBSTA and the SBI requested their Chairs to prepare a **compilation and mapping of existing indicators relevant to measuring progress towards the targets referred to in paragraphs 9–10 of decision 2/CMA.5, including information on areas potentially not covered by existing indicators.**
- The SBSTA and the SBI invited the **AC to contribute to this compilation and mapping by identifying information on indicators reported by Parties in their national reports and communications.**

## II. AC's contribution

- To respond to this mandate, **the AC compiled adaptation indicators reported by Parties in their national reports and communications** and mapped them to the **targets referred to in paragraphs 9–10 of decision 2/CMA.5**
- The AC transmitted its contribution to the Chairs of the SBSTA and SBI on 16 September 2024, which included:
  - Information on the methodology to collect the data, incl. challenges, assumptions and limitations
  - Compilation and mapping

# III. Approach and data collection

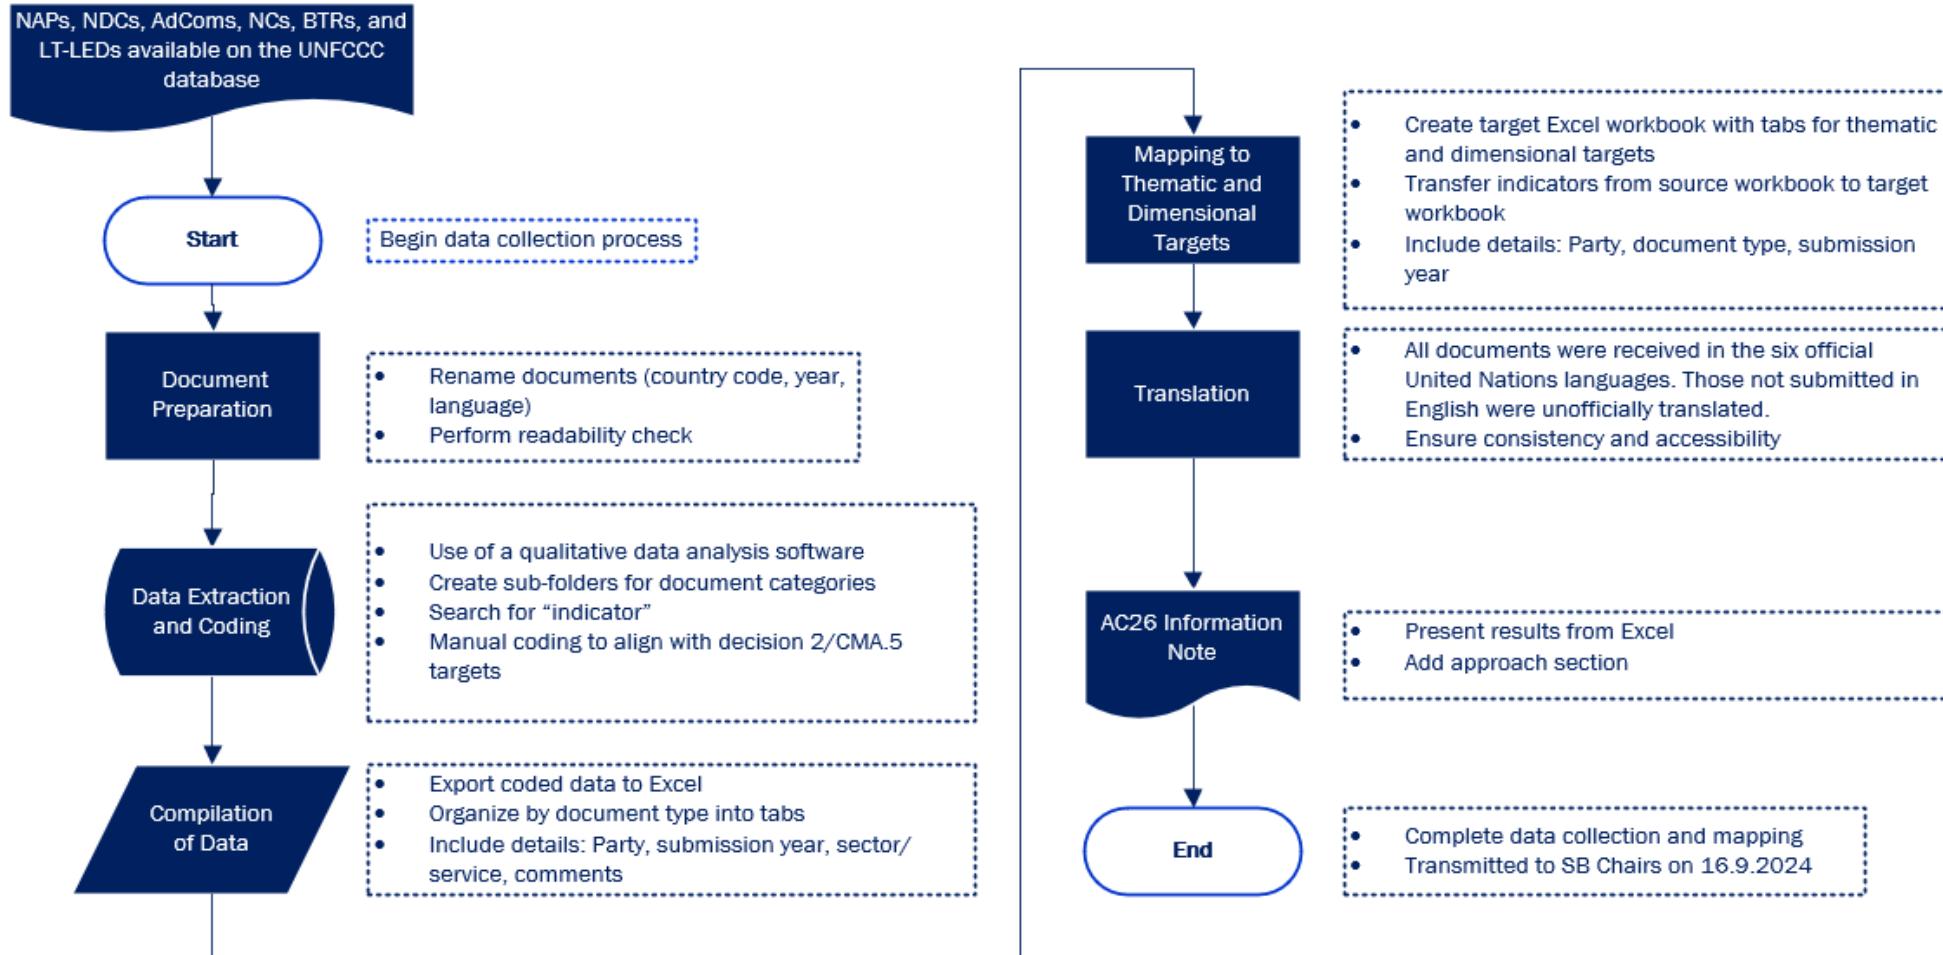

- Indicators were extracted from the following documents:

|   | NAPs       | NDCs       | ADC<br>OMs | LT-<br>LEDS | BTRs       | NCs       |
|---|------------|------------|------------|-------------|------------|-----------|
| <b>Number of documents with specific indicators</b> | 38         | 23         | 9          | 7           | 2          | 3         |
| <b>Total number of submitted documents</b>          | 58         | *158       | 66         | 73          | 10         | 197       |
| <b>Percentage of docs with indicators</b>           | <u>66%</u> | <u>15%</u> | <u>14%</u> | <u>10%</u>  | <u>20%</u> | <u>2%</u> |

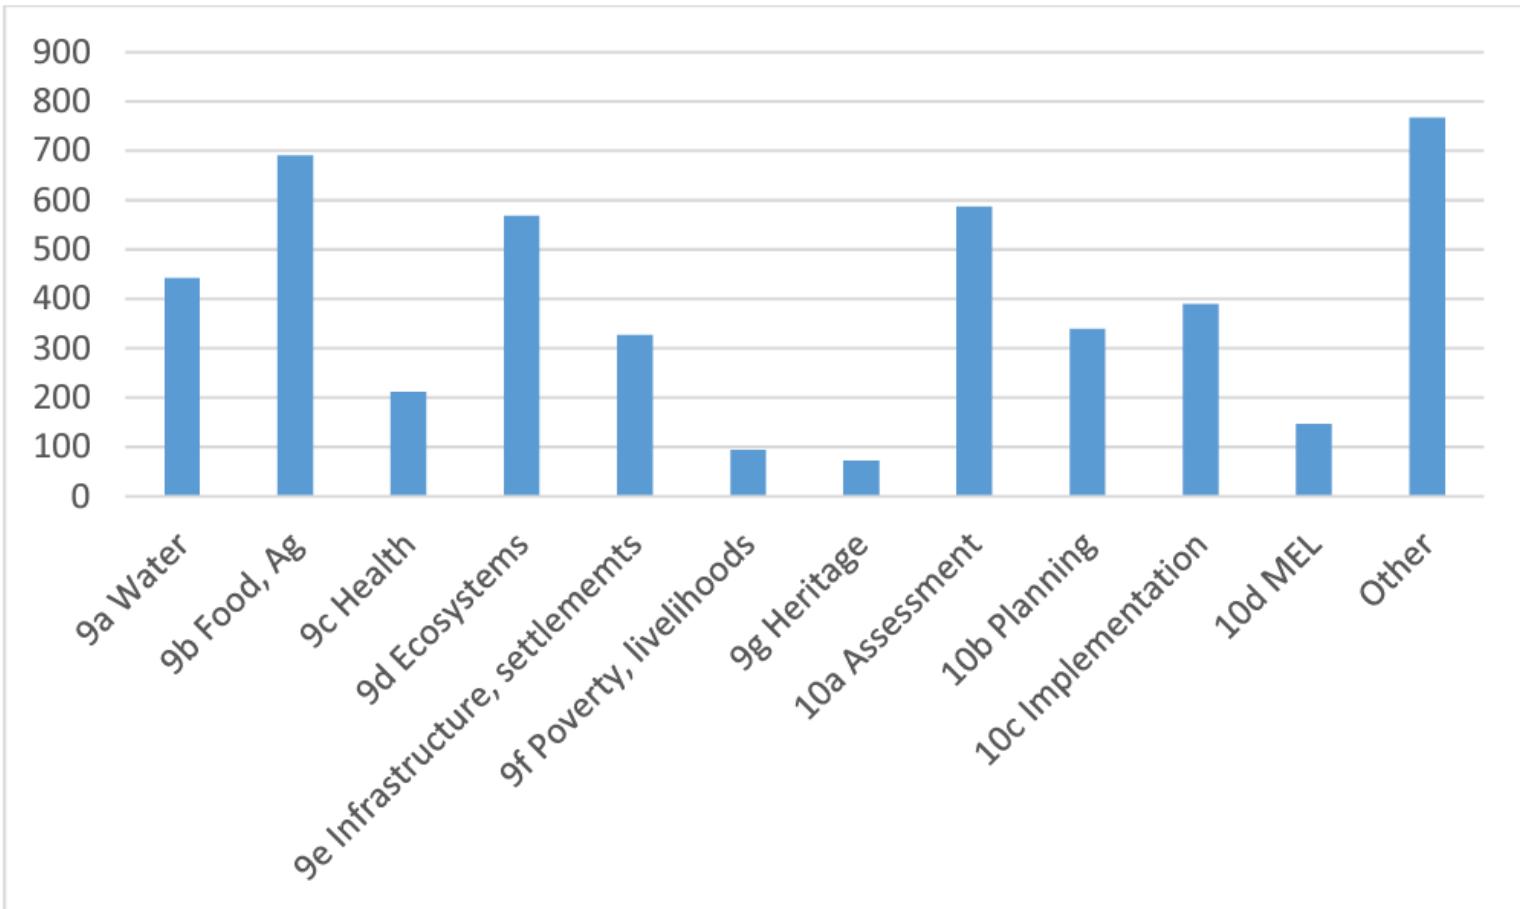

\* For NDCs only the ones with an adaptation component are counted.

- A total of **4,639 entries** were included in the compilation and mapping.

# IV. Approach and data collection

## V. Indicators from all document types mapped against the targets listed in decision 2/CMA/5

# VI. Example of the mapped indicators

9(a) Significantly reducing climate-induced water scarcity and enhancing climate resilience to water-related hazards towards a climate-resilient water supply, climate-resilient sanitation and towards access to safe and affordable potable water for all

| Indicator  | Country | NAP  | NDC  | LT-LEDS | AdCom | NC | BTR |
|--|---------|------|------|---------|-------|----|-----|
| Number of households affected by drought   | AGO     |      | 2021 |         | 2021  |    |     |
| Number of properties flooded per year  | AGO     |      | 2021 |         | 2021  |    |     |
| Number of properties located in river/coastal floodplain   | AGO     |      | 2021 |         | 2021  |    |     |
| Number of people living in flood-prone areas   | AGO     |      | 2021 |         | 2021  |    |     |
| Number of properties flooded per year  | AGO     |      | 2021 |         | 2021  |    |     |
| Percentage of coastline under marine protection  | AGO     |      | 2021 |         | 2021  |    |     |
| Number of public awareness campaigns on water efficiency   | AGO     |      | 2021 |         | 2021  |    |     |
| Percentage of total livestock killed by drought  | AGO     |      | 2021 |         | 2021  |    |     |
| Losses of GDP in percentage per year due to extreme rainfall   | AGO     |      | 2021 |         | 2021  |    |     |
| Drinking water quality NAP Albania   | ALB     | 2021 |      |         |       |    |     |
| At least some adaptation related specific measures are included in the implementation plan for each River Basin Management Plans (RBMP) as following: (i) Proper spatial planning; (ii) Flood risk and draught risk maps; (iii) Population awareness for specific areas as given in hazard maps; (iv) Agricultural adaptatio; (v) Flood risk and | ALB     | 2021 |      |         |       |    |     |
| The implementation process for the River Basin Management Plans (RBMP) is designed in a way that climate change adaptation is adequately reflected   | ALB     | 2021 |      |         |       |    |     |
| The river basin management plans are prepared and they do include also adaptation measures to climate change   | ALB     | 2021 |      |         |       |    |     |
| Climate change will be reflected adequately also in the implementing phase of the River Basin Management Plans (RBMP)  | ALB     | 2021 |      |         |       |    |     |
| Climate change is reflected and/or is part of the Strategical Environmental Assessment for each of the river basins  | ALB     | 2021 |      |         |       |    |     |

# VII. Assumptions, challenges, limitations

---

- **The mapping process was limited to explicit mentions of the term "indicator" by the Party** and did not account for synonyms or alternative terms.
- **The term "indicator" was contained in documents submitted in English, French and Spanish** (or their translation) and was not found in documents submitted in Arabic, Chinese and Russian (or their translation).
- **The indicators were sourced from NAPs, NDCs, AdComs, NCs, BTRs, and LT-LEDs and manually categorized to the UAE Framework** for Global Climate Resilience, which might differ from their initial intent.
- **A certain degree of interpretation had to be applied in some cases to match indicators to the targets.**
- **The indicators were included as provided by the countries**, without standardized definitions or consistent formats across the source documents. .
- **Indicators not fitting any targets were listed in a separate category named "other".**
- **Resources required to process a large amount of data manually** on short notice with limited time available.

---
