3. Agriculture.....	42	
4. Land use, land-use change and forestry.....	47	
5. Waste	70	

I. Mandate

1. The COP, by its decision 24/CP.19, adopted the revised “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part I: UNFCCC reporting guidelines on annual inventories” (hereinafter referred to as the UNFCCC reporting guidelines)¹ and a revised set of common reporting format (CRF) tables² to be used by Annex I Parties to report quantitative GHG inventory data. Similarly, the Conference of the Parties serving as the meeting of the Parties to the Kyoto Protocol (CMP), by decision 6/CMP.9, adopted the revised CRF tables³ that Parties shall use for reporting information on anthropogenic greenhouse gas emissions by sources and removals by sinks from land use, land-use change and forestry (LULUCF) activities under Article 3, paragraphs 3 and 4, of the Kyoto Protocol in the second commitment period.

2. The Conference of the Parties (COP), by its decision 13/CP.20, adopted the revised guidelines for the technical review of greenhouse gas (GHG) inventories from Parties included in Annex I to the Convention (Annex I Parties).⁴ As part of the process for the technical review of GHG inventories, the COP also requested the secretariat to compile and tabulate aggregate information on greenhouse gas emissions by sources and removals by sinks and trends from the latest available GHG inventory submissions of Annex I Parties and publish this information in a stand-alone document.⁵ This document responds to this mandate.

II. Comparison of greenhouse gas inventory information

A. Approach

3. This document contains GHG inventory information compiled in tabular format. The tables provide information on emissions by sources and removals by sinks, implied emission factors (IEFs), and activity data (AD) reported by Annex I Parties. In addition the tables contain information on the methods and emission factors used, activity data from international sources and other information relating to GHG inventory estimates. This information is provided for both the base year/period and for the year 2013.

4. The information provided in this document is based on information in the CRF tables of the 2015 national GHG inventories submission, received from Parties as at 9 November 2015. The inventory data are presented according to the sectors, subsectors and categories specified in the CRF tables.

5. In accordance with decision 13/CP.20, in 2015, Annex I Parties may submit their common reporting format (CRF) tables after 15 April. At the time of the publication of this document, not all Parties had submitted their GHG inventories, therefore, the data presented here may not reflect the latest information provided by Parties. The latest GHG inventory data are available on the UNFCCC website.⁶

¹ The full text of the guidelines is contained in annex I to decision 24/CP.19.

² The tables, agreed in decision 24/CP.19, can be accessed here: <<http://unfccc.int/5333.php>>

³ The tables, agreed in decision 6/CMP.9, can be accessed here: <<http://unfccc.int/7969.php>>

⁴ The full text of the guidelines is contained in the annex to decision 13/CP.20.

⁵ Decision 13/CP.20, paragraphs 8.

⁶ <http://unfccc.int/national_reports/annex_i_ghg_inventories/national_inventories_submissions/items/8812.php>.

6. As at 9 November 2015, 31 Parties had submitted their CRF tables, including Kazakhstan, which is an Annex I Party for the purposes of the Kyoto Protocol, while remaining a Party not included in Annex I to the Convention for the purposes of the Convention.

7. The information contained in this report is not intended as a judgment of whether inventory problems exist; it should be understood as information that can be considered further during the individual review by the expert review teams.

8. Information on anthropogenic GHG emissions by sources and removals by sinks from LULUCF activities reported under the Kyoto Protocol is not included in this document because the guidance for conducting reviews under Article 8 of the Kyoto Protocol in the second commitment period has not yet been finalized by the CMP. The negotiations on this matter, and also other matters related to the implementation of Articles 5 and 7 of the Kyoto Protocol, including accounting and reporting, are still ongoing.⁷

9. In accordance with the UNFCCC Annex I reporting guidelines on annual inventories, Parties should, where necessary, conduct recalculations in order to improve the quality of their emission estimates and ensure the consistency of the time series. As 2015 was the first year for Parties to use the revised reporting guidelines contained in decision 24/CP.19, recalculations of, or comparisons with, previous inventories are not included in this report.

B. Explanatory notes to the tables

10. Blank cells in a table indicate that a Party did not report information for a given category, gas, AD or other parameter. Where a Party's value is very small compared with that of other Parties, it has been rounded to zero (0.0 or 0.00). Where a Party reports a zero numerical value, a zero value (0) is shown.

11. In tables where shares or contributions of categories, gases, AD or other parameters to a total are shown (e.g. contribution of specific fuel type to the total emissions of a combustion category), where a Party reports a notation key, zero value (0) or blank in either the numerator or denominator of the calculation, the share or contribution to the total is shown using the symbol “-”.

12. The differences in AD between the values reported by Parties and international data sources were calculated as percentage deviations from the AD provided by the Party. A positive number indicates that the data from the international data source are higher than the data reported by the Party. Similarly, a negative number indicates that data from the international data source are lower than the data reported by the Party.

13. References to the base year refer to 1990, except for the following Parties with economies in transition which, in accordance with decisions 9/CP.2 and 11/CP.4, use base years other than 1990: Bulgaria (1988), Hungary (average 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986).

14. The column “Share of national total” in the tables indicates the contribution of that category to the Party's national total of GHG emissions in terms of carbon dioxide equivalent, without emissions and removals from LULUCF including indirect CO₂ emissions where reported.

⁷ The latest version of the negotiating text on these matters can be found in document FCCC/SBSTA/2015/L.13, in annex II in particular.

15. Where Parties used notation keys “NO”, “NE”, “NA”, “IE” or “C”, these have been reproduced verbatim from the CRF tables provided by Parties. The notation keys, as described in the UNFCCC reporting guidelines, are as follows:

NO	Not occurring	IE	Included elsewhere
NE	Not estimated	C	Confidential
NA	Not applicable		

16. Tables on energy indicate whether IEFs given in the CRF are based on gross calorific value (GCV) or net calorific value (NCV). Australia, Canada, and New Zealand reported energy data on a GCV basis, whilst Denmark reported using a combination of GCV and NCV. The IEFs included in the energy section of this report for these Parties have been converted into NCV-based values (using 5 per cent of difference between GCV and NCV for liquid, solid, other fuels and biomass and 10 per cent for gaseous fuels) and do not reflect the reported IEFs.

17. The following chemical formulae or abbreviations for GHGs are used in this document:

C	carbon
CH ₄	methane
CO ₂	carbon dioxide
HFCs	hydrofluorocarbons
N ₂ O	nitrous oxide
NF ₃	nitrogen trifluoride
NMVOC	non-methane volatile organic compound
PFCs	perfluorocarbons
SF ₆	sulphur hexafluoride

18. To indicate the methods and emission factors used by Parties, the following abbreviations have been used (see also footnotes to Summary table 3 of the CRF) in this document:

<u>Methods:</u>		<u>Emission factors:</u>	
D	IPCC default	D	IPCC default
RA	Reference approach	CR	CORINAIR
T1	IPCC tier 1	CS	Country specific
T1a, T1b, T1c	IPCC tier 1a, tier 1b and tier 1c, respectively	PS	Plant specific
T2	IPCC tier 2	M	Model
T3	IPCC tier 3	OTH	Other
CR	CORINAIR		
CS	Country specific		
M	Model		
OTH	Other		

19. The following units have been used in this document:

kg	kilogram (10^3 grams)
kt	kilotonne (10^9 grams)
Mg	megagram (10^6 grams) – same as tonne
t	tonne (10^6 grams)
Mt	megatonne (10^{12} grams)
TJ	terajoule (10^{12} joules)
PJ	petajoule (10^{15} joules)
km	kilometre
ha	hectare
kha	thousand hectares
m ³	cubic metre
AB	area burned
AD	activity data
BB	biomass burned
CO	carbon monoxide
CRF	common reporting format
CSC	carbon stock change
dm	dry matter
DOM	dead organic matter
EF	emission factor
FAO	Food and Agriculture Organization of the United Nations
GCV	gross calorific value
GHG	greenhouse gas
IEA	International Energy Agency
IEF	implied emission factor
LPG	liquefied petroleum gas
LULUCF	land use, land-use change and forestry
N	nitrogen
NCV	net calorific value
NGL	natural gas liquids
NH ₃	ammonia
NIR	national inventory report
NMVOC	non-methane volatile organic compounds
NO _x	nitrogen oxides
yr	year

C. List of sectoral figures and tables with information submitted under decision 24/CP.19

1. General

<u>Figure number</u>	<u>Figure name</u>

Figure G.1

GHG emissions by gas^a (including LULUCF): base year^b and 2013

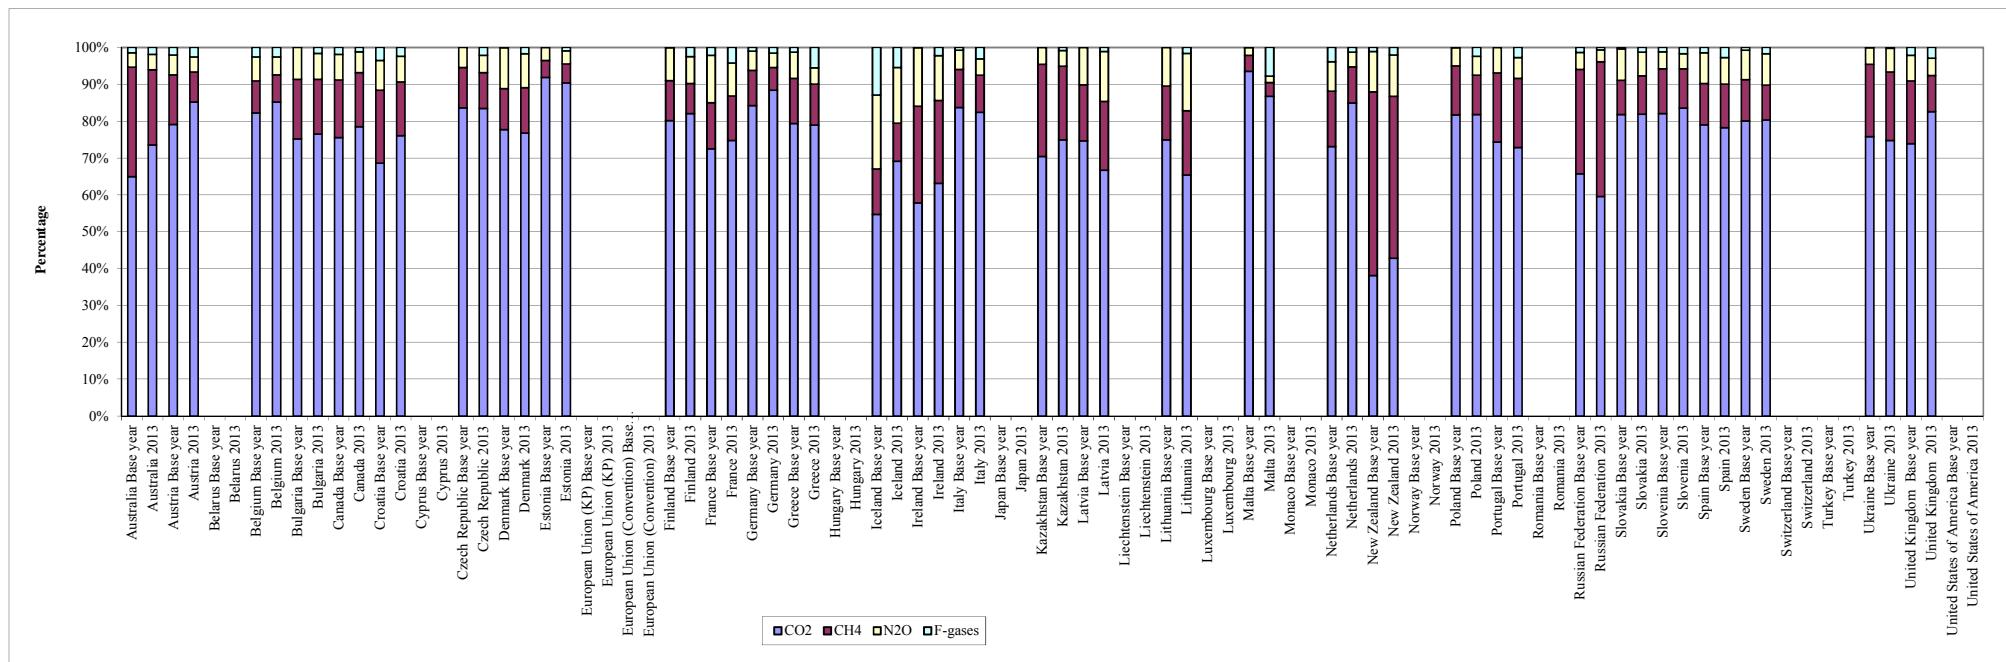

^a The national totals and emissions by CO₂ in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Figure G.2

GHG emissions by gas^a (excluding LULUCF): base year^b and 2013

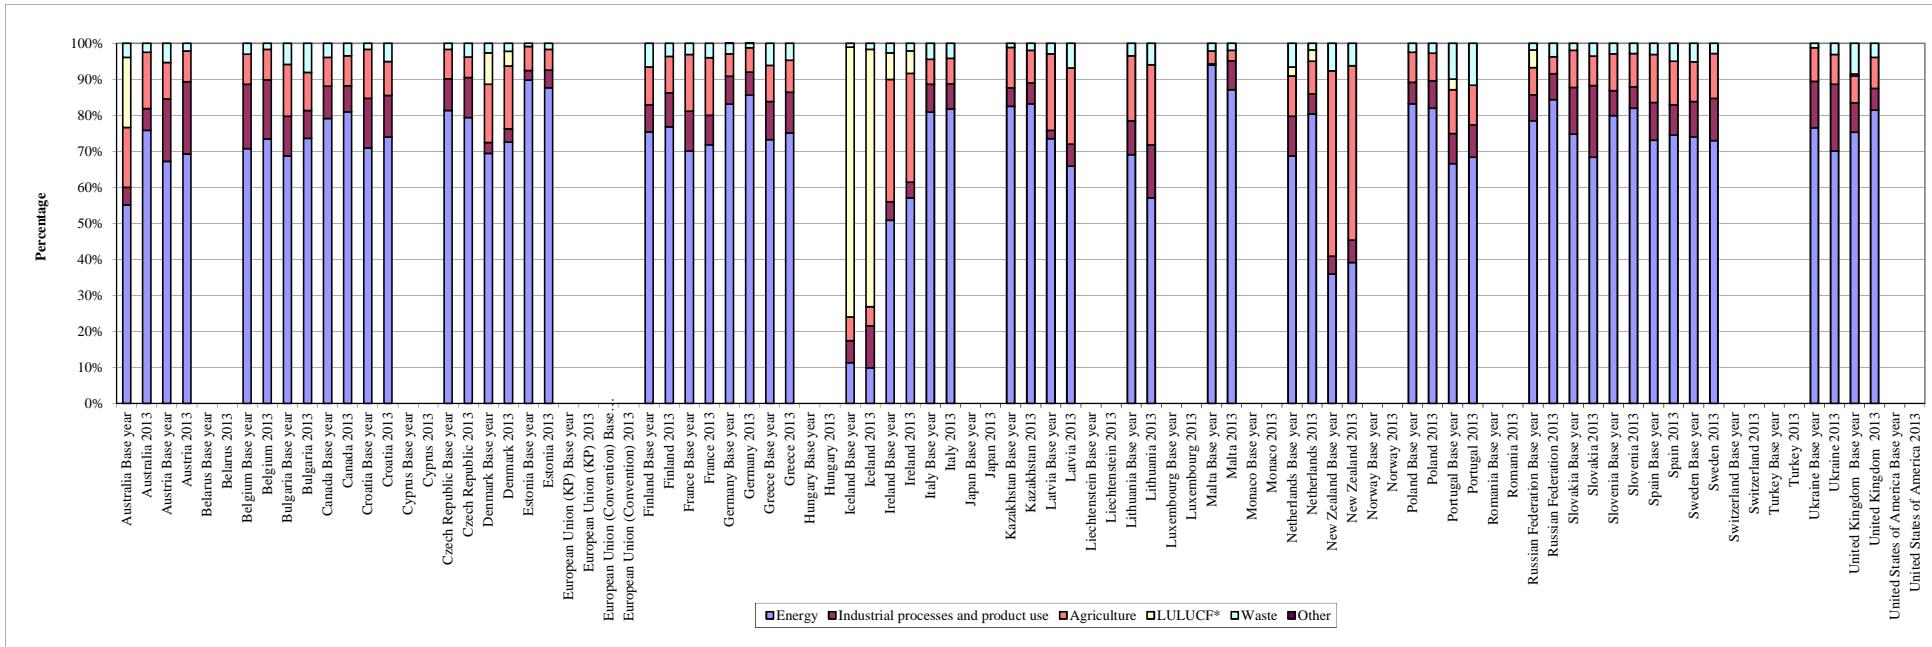

^a The national totals and emissions by CO₂ in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Figure G.3

GHG emissions^a by sector: base year^b and 2013 (%)

* In this graph emissions from the LULUCF sector are included only if this sector is a net source of emissions.

^a The national and sectoral totals in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Notes: (1) Blank cells indicate that no submission had been received as at 9 November 2015. Some Parties, such as Cyprus, Luxembourg, Norway, Romania, Turkey and the United States of America, submitted their CRF tables after 9 November 2015; such submissions could not be reported on in this document. (2) The European Union and its member States that had not submitted their CRF tables as at 9 November 2015 (Cyprus, Hungary, Luxembourg and Romania) have communicated to the secretariat that they plan to submit their inventory submissions prior to the start of the twenty-first session of the Conference of the Parties. Once these submissions have been made, they will be available on the UNFCCC website <<http://unfccc.int/8812.php>>.

Figure 1.1

Contribution of subsectors to total GHG emissions in the energy sector^{a,b}

^a In accordance with the UNFCCC reporting guidelines on annual GHG inventories of Annex I Parties, the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

United States of America 2013			

^a Indirect CO₂ emissions are excluded from the totals in this table.

^b In accordance with the UNFCCC reporting guidelines on annual GHG inventories of Annex I Parties, the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and Construction and 1.A.4 Other sectors.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^b The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, New Zealand (and Denmark, who reported a combination of GCV and NCV). Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis. The IEFs included in this table have been converted into NCV-based values and are not reflecting the reported IEFs.^c Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.^d Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and Construction.^e Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and Construction and 1.A.4 Other sectors.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^b The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, New Zealand (and Denmark, who reported a combination of GCV and NCV). Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis. The IEFs included in this table have been converted into NCV-based values and are not reflecting the reported IEFs.^c Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.^d Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and Construction.^e Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and Construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Romania (1989) and Slovenia (1986).

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^b Information on methods and emission factors in this table is a reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.3 Transport.^c The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, New Zealand (and Denmark, who reported a combination of GCV and NCV). Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis. The IEFs included in this table have been converted into NCV-based values and are not reflecting the reported IEFs.^d Source of default emission factors: 2006 IPCC Guidelines, Volume 2, Chapter 3: Mobile Combustion. CO₂ table 3.2.1. N₂O table 3.2.2.

^a Information on methods and emission factors in this table is reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.3 Transport.^b The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^c Source of default emission factors: 2006 IPCC Guidelines, Volume 2, Chapter 3: Mobile Combustion. Table 3.6.4 for Jet kerosene, Aviation gasoline. Table 3.5.2 Residual oil, Gas/diesel oil.

^a Data provided by IEA on 15 July 2015.^b UNFCCC has included the quantities reported in IEA for 'kerosene type jet fuel' and 'gasoline type jet fuel'.^c UNFCCC has included the quantities reported in IEA for 'aviation gasoline' and 'motor gasoline'.^d Geographical coverage of IEA data:

IEA data for Denmark do not include Faroe Islands and Greenland.

IEA data for France includes data for Monaco, but excludes data for the following overseas territories: Guadeloupe, Guyana, Martinique, New Caledonia, French Polynesia, Reunion and Saint Pierre Miquelon.

No IEA data for Liechtenstein are available. These data are not included in the data of Switzerland.

IEA data for the Netherlands are only for the European part.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^b Information on methods and emission factors in this table is a reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.B.1 Solid fuels.

^c Data provided by IEA on 15 July 2015.

^d Source of default emission factors: 2006 IPCC Guidelines, Volume 2, Chapter 4, pages 4.12 to 4.19 (Tier 1).

^aThe units of the implied emission factors (IEF) vary from Party to Party depending on the unit of the activity data used. The unit of the IEF is kg/unit of activity data.^bSource of default emission factors: 2006 IPCC Guidelines, Volume 2, Chapter 4, table 4.2.4. Tier 1 Emission Factors in developed countries. Values converted from Gg to kg.

Figure 2.1

Contribution of subsectors to total GHG emissions in the industrial processes and product use sector^{a,b}

^a In accordance with the UNFCCC reporting guidelines on annual GHG inventories of Annex I Parties, the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

^a Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 2.A Mineral industry.

^b The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^c The CRF requests Parties to specify the activity data used (e.g. cement or clinker) for estimating the emissions from cement production. The descriptions included in this column are as reported in the CRF by Parties.

^d Source of default emission factors: 2006 IPCC Guidelines, Volume 3, Chapter 2: Mineral Industry Emissions; cement production 2.2.1.2; lime production table 2.4.

^a Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for HFCs and PFCs for all subcategories within the category 2.F Product uses as substitutes for ODS.

Figure 3.1

Contribution of subsectors to total GHG emissions in the agriculture sector^{a,b}

^aIn accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^bIndirect CO₂ emissions are excluded from the totals in this graph.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^b Information on methods and emission factors in this table is presented as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for the various livestock types within the category 3.A Enteric fermentation - CH₄.

^c Information on implied emission factors reported by Bulgaria, Croatia, Estonia, Iceland, Netherlands, Ukraine refers, respectively, to mature dairy cattle and other mature cattle and growing cattle combined, as these Parties have used Option B to report livestock types within the category 3.A Enteric fermentation. Information reported by Parties using Option C (Australia, Latvia, Poland, Slovenia) are not shown.

^d Source of international statistics: FAOSTAT data, downloaded on 10 September 2015 from <http://faostat3.fao.org>.

^e Source of default emission factors: 2006 IPCC Guidelines, Chapter 10: Emissions from Livestock and Manure Management; Dairy and Other cattle table 10.11; Sheep and Swine Table 10.10.

^f For dairy and other cattle, 2006 IPCC default emission factors (in kg CH₄/head/year) are provided by regions as shown below (see footnote e for source reference).

North America	Western Europe	Eastern Europe	Oceania	Latin America	Asia	Africa and Middle East	Indian Subcontinent
Dairy cattle	128	117	99	90	72	68	46
Other cattle	53	57	58	60	56	47	31

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^b Information on methods and emission factors in this table is a reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category N₂O from 4.B Manure management.^c Information on implied emission factors reported by Bulgaria, Croatia, Estonia, Iceland, Netherlands, Ukraine refers, respectively, to mature dairy cattle and other mature cattle and growing cattle combined, as these Parties have used Option B to report livestock types within the category 3.B Manure management. Information reported by Parties using Option C (Australia, Latvia, Poland, Slovenia) are not shown.^d Data is not presented for Parties that report a Party specific category name (e.g. Pigs not Swine) or that do not specify category name.^e Source of default N excretion rates: 2006 IPCC Guidelines, Chapter 10, Volume 4, Table 10.19 (page 10.59). Default values are provided by regions as shown below. The unit of the IPCC defaults is kg N (1000 kg animal mass)⁻¹ day⁻¹.

IPCC defaults:

	North America	Western Europe	Eastern Europe	Oceania	Latin America	Africa	Middle East	Asia
Dairy cattle	0.44	0.48	0.35	0.44	0.48	0.6	0.70	0.47
Non-dairy cattle	0.31	0.33	0.35	0.50	0.36	0.63	0.79	0.34
Sheep	0.42	0.85	0.90	1.13	1.17	1.17	1.17	1.17
Swine	0.50	0.68	0.74	0.73	1.64	1.64	1.64	0.50
Poultry	0.83	0.83	0.82	0.82	0.82	0.82	0.82	0.82

^a Information on methods and emission factors is included in this table as reported by Parties in table Summary 3 of the CRF. It may therefore not reflect the actual method or type of emission factor used for all subcategories within the category 4.D Agricultural soils - N₂O.

^b The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.

^c Source of default emission factors: 2006 IPCC Guidelines, table 11.1, page 11.11. IEFs for N-fixing crops and crop residues are shown in the unit kg N₂O-N/kg N. The unit of the IPCC default emission factor is also kg N₂O-N/kg N.

^d For cultivation of histosols (drained/managed organic soils), the two default values refer to temperate. The values in parenthesis indicate the range as presented in the 2006 IPCC Guidelines, table 11.1, page 11.11.

^e For cultivation of histosols (drained/managed organic soils), the two default values refer to temperate tropical. The values in parenthesis indicate the range as presented in the 2006 IPCC Guidelines, table 11.1, page 11.11.

^f Source of default emission factor: 2006 IPCC Guidelines, table 11.3, page 11.24.

^a The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).^b Where Parties directly estimate emissions and removals rather than carbon stock changes, they may use notation keys only in the stock change columns.^c CSC = carbon stock change.^d Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.^e When Parties cannot estimate carbon stock changes for organic and mineral soil separately, these should be reported under mineral soils.^f Parties who wish to do so may report annual on-site CO₂-C emissions/removals and off-site CO₂-C emissions from drained and rewetted organic soils here.

^a The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).

^b Where Parties directly estimate emissions and removals rather than carbon stock changes, they may use notation keys only in the stock change columns.

^c CSC = carbon stock change.

^d Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.

^e DOM = dead organic matter.

^f When Parties cannot estimate carbon stock changes for organic and mineral soil separately, these should be reported under mineral soils.

^g Parties who wish to do so may report annual on-site CO₂-C emissions/removals and off-site CO₂-C emissions from drained and rewetted organic soils here.

^a In accordance with the UNFCCC reporting guidelines on annual GHG inventories of Annex I Parties, the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4 and 7/CP.12, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Table 4.11

^a Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method used or type of emission factor for all subcategories within the category 5.C Incineration and open burning of waste.^b Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method used or type of emission factor for all subcategories within the category 5.D Wastewater treatment and discharge.^c Source of population data: World Bank <http://databank.worldbank.org/data/home.aspx>, downloaded 10 September 2015.^d The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Czech Republic, Denmark, Estonia, Finland, France, Ireland, Latvia, Netherlands and Portugal.^e Calculated using population data from CRF Table 5.D. World Bank population data was used for Kazakhstan and Netherlands as it was not presented in CRF Table 5.D.^f Source of default emission factors: 2006 IPCC Guidelines, Volume 5, page 6.25.

Table 5.1b

Solid waste disposal on land, biological treatment of solid waste, incineration and open burning of waste and wastewater treatment and discharge (2013)

Activity data		Solid waste disposal									Biological treatment of solid waste
