4. Land use, land-use change and forestry	38
5. Waste	44

I. Mandate

1. The Conference of the Parties (COP), by its decision 13/CP.20, adopted the revised guidelines for the technical review of greenhouse gas (GHG) inventories from Parties included in Annex I to the Convention (Annex I Parties). As part of the process for the technical review of GHG inventories, the COP requested the secretariat to compile and tabulate aggregate information on GHG emissions by sources and removals by sinks and trends from the latest available GHG inventory submissions of Annex I Parties and to publish this information in a stand-alone document.¹

2. Pursuant to decision 22/CMP.1, annex, in conjunction with decision 4/CMP.11, the initial check and the scope of the individual review shall be conducted consistent with the initial assessment and apply the relevant provisions for the review contained in decision 13/CP.20.

3. The COP, by its decision 24/CP.19, adopted the revised “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part I: UNFCCC reporting guidelines on annual greenhouse gas inventories” (hereinafter referred to as the UNFCCC reporting guidelines) and a revised set of common reporting format (CRF) tables² to be used by Annex I Parties to report quantitative GHG inventory data.

4. Following decisions 24/CP.19 and 6/CP.27, the global warming potential (GWP) values to be used to report aggregate emissions and removals in carbon dioxide equivalent (CO₂ eq) shall be those based on the effects of GHGs over a 100-year time-horizon listed in either the Fourth or Fifth Assessment Report of the Intergovernmental Panel on Climate Change.

II. Comparison of greenhouse gas inventory information

A. Approach

5. This report contains GHG inventory information compiled in tabular format. The tables provide information on emissions by sources and removals by sinks, implied emission factors (IEFs) and activity data (AD) reported by Annex I Parties, as well as information on the methods and emission factors used, AD from international sources and other information relating to GHG inventory estimates. This information is provided for both the base year/period and for 2021.

6. The GHG inventory data are presented by sector, subsector and category as specified in the CRF tables.

7. The information in this report is derived from the CRF tables in the 2023 national GHG inventories received from 43 Annex I Parties³ as of 30 May 2023. Additionally, since Australia submitted common reporting tables⁴ along with its 2023 national GHG inventory,

¹ Decision 13/CP.20, para. 8.

² Available at <https://unfccc.int/process-and-meetings/transparency-and-reporting/reporting-and-review-under-the-convention/greenhouse-gas-inventories-annex-i-parties/reporting-requirements/use-of-the-2006-ipcc-guidelines-for-national-greenhouse-gas-inventories-and-revision-of-the-unfccc>.

³ This figure includes Kazakhstan, which is an Annex I Party for the purposes of the Kyoto Protocol, but remains a Party not included in Annex I to the Convention for the purposes of the Convention.

⁴ Common reporting tables for the electronic reporting of the information in the national inventory reports of anthropogenic emissions by sources and removals by sinks of GHGs under the Paris Agreement, in accordance with decisions 18/CMA.1 and 5/CMA.3.

the data presented in this report for Australia is extracted from the CRF tables in its 2022 inventory submission.⁵

8. The GHG inventory data expressed in CO₂ eq are in accordance with the GWP values used by Parties in their submissions.

9. The following geographical areas are covered in the submissions considered in this report: Denmark, covering the mainland, Greenland and the Faroe Islands; European Union, covering its 27 member States; France, covering metropolitan France, the French Overseas Departments, the French Overseas Collectivities and New Caledonia; and the United Kingdom of Great Britain and Northern Ireland, covering United Kingdom, the Crown Dependencies, Bermuda, Cayman Islands, Falkland Islands (Malvinas) and Gibraltar.

10. The information contained in this report is intended not as an assessment of whether inventory problems exist, but rather as an indication of potential issues that need to be considered further during the individual review by the expert review team.

B. Explanatory notes to the tables

11. Blank cells in a table indicate that a Party did not report information for a given category, gas or type of AD or another parameter. Where a Party's value is very small compared with that of other Parties, it has been rounded to zero (0.00 or 0.000). Where a Party reported a zero numerical value, a zero value (0) is shown.

12. In tables where shares or contributions of categories, gases, AD or other parameters to a total are shown (e.g. the contribution of a specific fuel type to the total emissions of a combustion category) and a Party reports a notation key, zero value (0) or blank in either the numerator or denominator of the calculation, the share or contribution to the total is shown using “–”.

13. The differences in the AD between the values reported by Parties and international data sources were calculated as percentage deviations from the AD provided by the Party. A positive number indicates that the data from the international data source are higher than the data reported by the Party, while a negative number indicates that data from the international data source are lower than the data reported by the Party.

14. References to the base year pertain to 1990, except for in the case of the following Parties, which, in accordance with decisions 9/CP.2 and 11/CP.4, use base years other than 1990: Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986).

15. The column “Share of national total” in the tables indicates the contribution of that category to the Party's total national GHG emissions in terms of CO₂ eq, excluding emissions and removals from land use, land-use change and forestry but including indirect CO₂ emissions where reported.

16. Where Parties used notation keys, these have been reproduced verbatim from the CRF tables provided. The notation keys, as described in the UNFCCC reporting guidelines, are as follows:

NO	Not occurring	IE	Included elsewhere
NE	Not estimated	C	Confidential
NA	Not applicable		

⁵ Submitted on 16 September 2022.

17. The tables in this report pertaining to the energy sector indicate whether the IEFs given in the CRF tables are based on the gross calorific value (GCV) or net calorific value (NCV). Australia, Canada, Japan, New Zealand and the United States of America reported energy data on a GCV basis. Hence, the IEFs reported for those cases are about 5 per cent lower for liquid, solid and other fuels, and about 10 per cent lower for gaseous fuels, than would have been the case if the data were given on a NCV basis.

18. The following chemical formulae or abbreviations for GHGs are used in this report:

C	carbon
CH ₄	methane
CO ₂	carbon dioxide
HFCs	hydrofluorocarbons
N ₂ O	nitrous oxide
NF ₃	nitrogen trifluoride
NMVOC	non-methane volatile organic compound
PFCs	perfluorocarbons
SF ₆	sulphur hexafluoride

19. To indicate the methods and emission factors used by Parties, the following abbreviations and acronyms are used (see also the footnotes to CRF Summary table 3) in this report:

<u>Methods</u>		<u>Emission factors</u>	
D	IPCC default	D	IPCC default
RA	Reference approach	CR	CORINAIR
T1	IPCC tier 1	CS	Country specific
T1a	IPCC tier 1a	PS	Plant specific
T1b	IPCC tier 1b	M	Model
T1c	IPCC tier 1c	OTH	Other
T2	IPCC tier 2		
T3	IPCC tier 3		
CR	CORINAIR		
CS	Country specific		
M	Model		
OTH	Other		

20. The following units are used in this report:

kg	kilogram (10^3 grams)
kt	kilotonne (10^9 grams)
Mg	megagram (10^6 grams)
t	tonne (10^6 grams)
Mt	megatonne (10^{12} grams)
TJ	terajoule (10^{12} joules)
PJ	petajoule (10^{15} joules)
km	kilometre
ha	hectare
kha	thousand hectares
m ³	cubic metre

21. The following abbreviations are used in this report:

AD	activity data
CO	carbon monoxide
CRF	common reporting format
CSC	carbon stock change

DOM	dead organic matter
EF	emission factor
FAO	Food and Agriculture Organization of the United Nations
GCV	gross calorific value
GHG	greenhouse gas
GWP	global warming potential
IEA	International Energy Agency
IEF	implied emission factor
LPG	liquefied petroleum gas
LULUCF	land use, land-use change and forestry
N	nitrogen
NCV	net calorific value
NIR	national inventory report
NMVOC	non-methane volatile organic compounds
NO _x	nitrogen oxides
yr	year

C. List of sectoral figures and tables with information submitted in accordance with decision 24/CP.19

1. General

<u>Figure number</u>	<u>Figure name</u>

Figure G.1

GHG emissions by gas^a (with LULUCF): base year^b and 2021

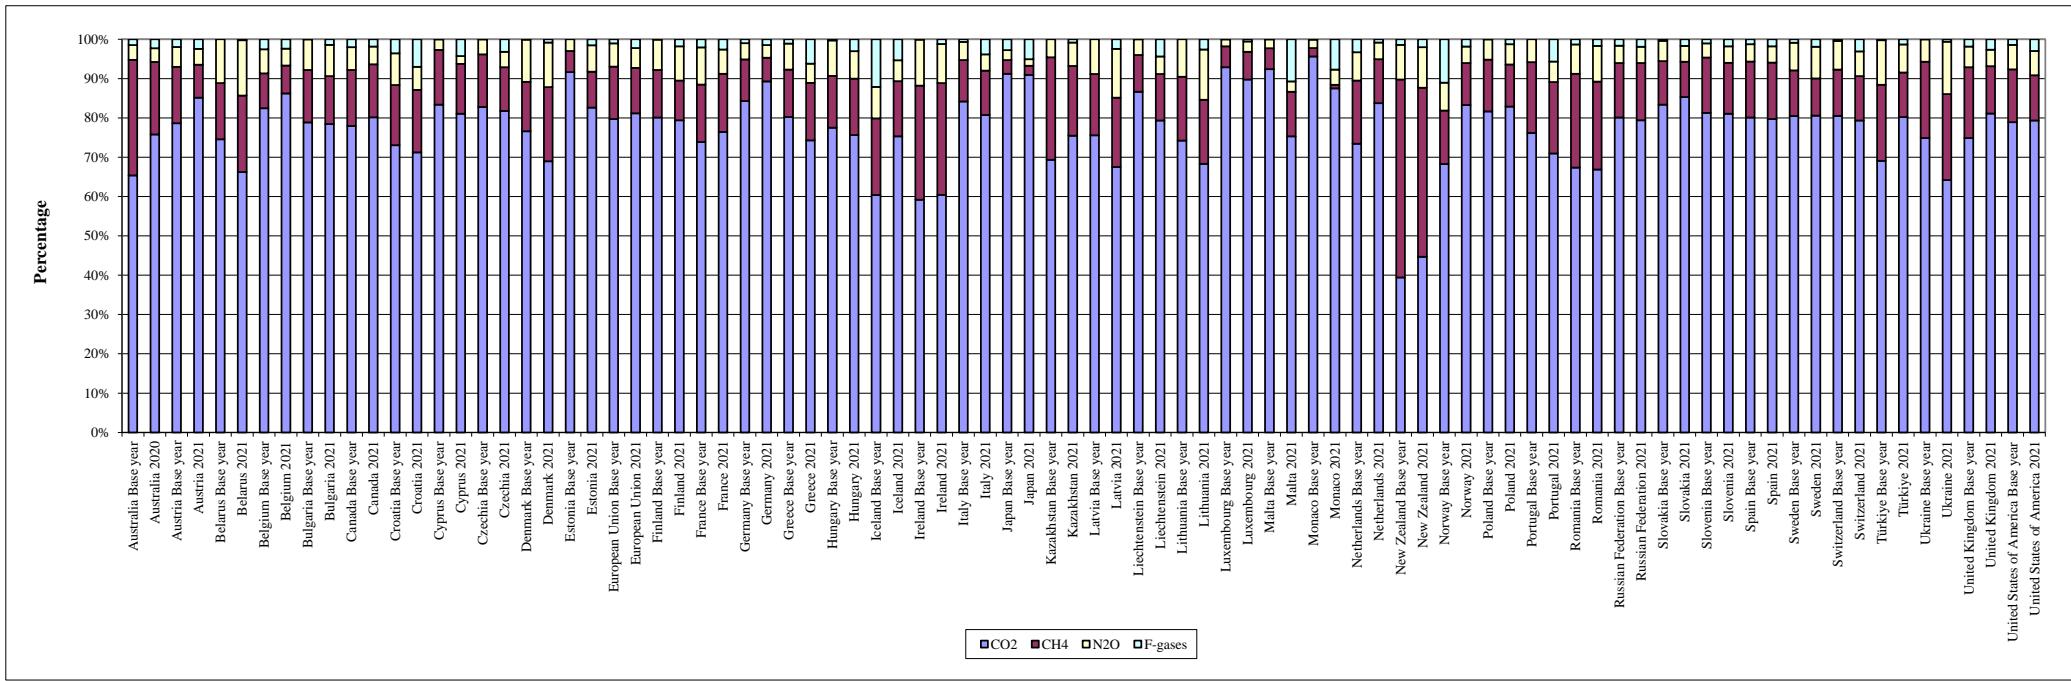

^a The national totals and emissions by CO₂ in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Figure G.2

GHG emissions by gas^a (without LULUCF): base year^b and 2021

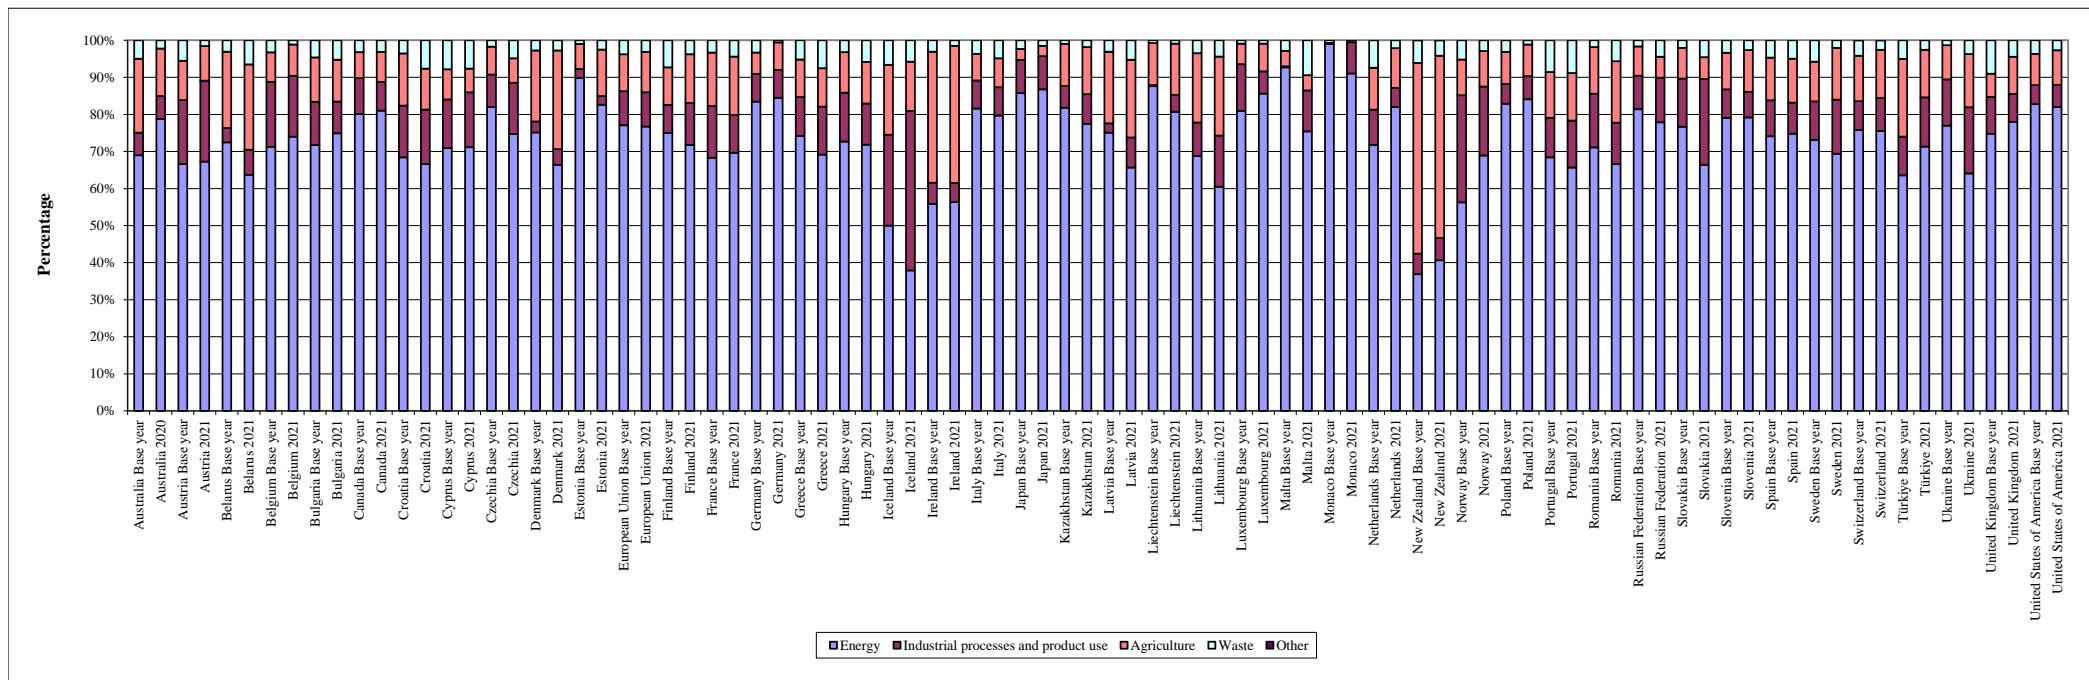

^a The national totals and emissions by CO₂ in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Figure G.3

GHG emissions^a by sector (without LULUCF): base year^b and 2021

^a The national totals and emissions by CO₂ in this graph include indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Table G.1

Submissions used in this report, including GWP values used

^a In accordance with decisions 24/CP.19 and 6/CP.27, Parties report aggregate emissions and removals in CO₂ eq using the GWP values from the Fourth Assessment Report (AR4) or Fifth Assessment Report (AR5) of the IPCC over a 100-year time-horizon.

^b Australia submitted common reporting tables under the Paris Agreement on 13 April 2023. Hence, this report is based on the CRF tables in the Australia's 2022 national GHG inventory with information reported for year 2020 presented in the tables and figures covering year 2021.

Figure 1.1

Contribution of subsectors to total GHG emissions in the Energy sector^{a,b}

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

Table 1.1**CO₂ emissions from fuel combustion: reference approach and sectoral approach^a**

	Reference approach	Sectoral approach	Difference (%)
	(kt CO ₂)

^a Indirect CO₂ emissions are excluded from the totals in this table.

^b In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^b The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, Japan, New Zealand and United States of America. Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis.^c Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.^d Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and construction.^e Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.^f Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.5 Other.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^b The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, Japan, New Zealand and United States of America. Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis.^c Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.^d Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and construction.^e Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.^f Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.5 Other.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^b The following Parties reported energy data on a gross calorific value (GCV) basis: Australia, Canada, Japan, New Zealand and United States of America. Hence, reported IEFs are about 5 per cent lower for liquid and solid fuels and biomass, and about 10 per cent lower for gaseous fuels than would have been the case if the data were given on a net calorific value (NCV) basis.^c Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.^d Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and construction.^e Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.^f Information on methods and emission factors in this table is as reported by Parties in table Summary 3 of the CRF. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.5 Other.

^a Based on IEA data from the IEA (2023) World energy balances data service, www.iea.org/data-and-statistics as of 8 June 2023.^b UNFCCC has included the quantities reported in IEA for 'kerosene type jet fuel' and 'gasoline type jet fuel'.^c UNFCCC has included the quantities reported in IEA for 'aviation gasoline' and 'motor gasoline'.^d Geographical coverage of IEA data:

IEA data for Australia excludes the overseas territories. IEA data for 2020 is shown in the table for Australia.

IEA data for Denmark do not include Faroe Islands and Greenland.

IEA data for France includes Monaco and excludes the overseas territories: New Caledonia; French Polynesia; Saint Barthélemy; Saint Martin; Saint Pierre and Miquelon; and Wallis and Futuna. Energy data for the following overseas departments: Guadeloupe; French Guiana; Martinique; Mayotte; and Réunion are included for the years from 2011 onwards and excluded for earlier years.

IEA data for Italy includes San Marino and the Holy See.

IEA data for Japan includes Okinawa.

No IEA data for Lichtenstein are available. Only the oil data are included in the data for Switzerland.

IEA data for Netherlands excludes Suriname, Aruba and the other former Netherland Antilles (Bonaire, Curaçao, Saba, Saint Eustatius and Sint Maarten).

IEA data for Portugal includes the Azores and Madeira.

No IEA data for Russian Federation and Belarus are available for 2021 as of 8 June 2023.

IEA data for Spain includes the Canary Islands.

^a Based on IEA data from the IEA (2023) World energy balances data service, www.iea.org/data-and-statistics as of 8 June 2023.^b Geographical coverage of IEA data:

IEA data for Australia excludes the overseas territories. IEA data for 2020 is shown in the table for Australia.

IEA data for Denmark do not include Faroe Islands and Greenland.

IEA data for France includes Monaco and excludes the overseas territories: New Caledonia; French Polynesia; Saint Barthélemy; Saint Martin; Saint Pierre and Miquelon; and Wallis and Futuna. Energy data for the following overseas departments: Guadeloupe; French Guiana; Martinique; Mayotte; and Réunion are included for the years from 2011 onwards and excluded for earlier years.

IEA data for Italy includes San Marino and the Holy See.

IEA data for Japan includes Okinawa.

No IEA data for Lichtenstein are available. Only the oil data are included in the data for Switzerland.

IEA data for Netherlands excludes Suriname, Aruba and the other former Netherland Antilles (Bonaire, Curaçao, Saba, Saint Eustatius and Sint Maarten).

IEA data for Portugal includes the Azores and Madeira.

No IEA data for Russian Federation and Belarus are available for 2021 as of 8 June 2023.

IEA data for Spain includes the Canary Islands.

^a Source of default emission factors: 2006 IPCC Guidelines for National Greenhouse Gas Inventories Volume 2 Chapter 5 Carbon Dioxide Transport, Injection and Geological Storage. Table 5.2. Tier 1 Emission Factors for pipeline transport of CO₂ from a CO₂ capture site to the final storage site.

Figure 2.1

Contribution of subsectors to total GHG emissions in the Industrial processes and product use sector^{a, b}

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.

^b The CRF requests Parties to specify the activity data used (e.g. cement or clinker) for estimating the emissions from cement production. The descriptions included in this column are as reported in the CRF by Parties.

^c Source of default emission factors: 2006 IPCC Guidelines for National Greenhouse Gas Inventories Volume 3 Chapter 2 Mineral Industry Emissions. Lime production table 2.4; glass production section 2.4.1.2.

Figure 3.1

Contribution of subsectors to total GHG emissions in the Agriculture sector^{a, b}

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^b Source of default emission factors: 2006 IPCC Guidelines for National Greenhouse Gas Inventories, table 11.1, page 11.11. IEFs for N-fixing crops and crop residues are shown in the unit kg N₂O-N/kg N. The unit of the IPCC default emission factor is also kg N₂O-N/kg N.^c For cultivation of histosols (drained/managed organic soils), the two default values refer to temperate. The values in parenthesis indicate the range as presented in 2006 IPCC Guidelines for National Greenhouse Gas Inventories, table 11.1, page 11.11.^d For cultivation of histosols (drained/managed organic soils), the two default values refer to temperate tropical. The values in parenthesis indicate the range as presented in 2006 IPCC Guidelines for National Greenhouse Gas Inventories, table 11.1, page 11.11.^e Source of default emission factor: 2006 IPCC Guidelines for National Greenhouse Gas Inventories, table 11.3, page 11.24.

^a The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).

^b Where Parties directly estimate emissions and removals rather than carbon stock changes, they may use notation keys only in the stock change columns.

^c CSC = carbon stock change.

^d Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.

^e For category cropland remaining cropland this column only includes changes in perennial woody biomass.

^f DOM = dead organic matter.

^g No reporting on DOM pools is required for category cropland remaining cropland.

^h When Parties cannot estimate carbon stock changes for organic and mineral soil separately, these should be reported under mineral soils.

ⁱ Parties who wish to do so may report annual on-site CO₂-C emissions/removals and off-site CO₂-C emissions from drained and rewetted organic soils here.

^a The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).^b Where Parties directly estimate emissions and removals rather than carbon stock changes, they may use notation keys only in the stock change columns.^c CSC = carbon stock change.^d Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.^e DOM = dead organic matter.^f No reporting on DOM pools is required for category grassland remaining grassland.^g When Parties cannot estimate carbon stock changes for organic and mineral soil separately, these should be reported under mineral soils.^h Parties who wish to do so may report annual on-site CO₂-C emissions/removals and off-site CO₂-C emissions from drained and rewetted organic soils here.

^a Source of international statistics: FAOSTAT data, downloaded on 16 June 2023. At the time of the download data for 2021 was not available, therefore, data for 2020 is shown in the table.

Figure 5.1

Contribution of subsectors to total GHG emissions in the Waste sector^{a, b}

^a In accordance with the UNFCCC reporting guidelines on annual inventories of Annex I Parties the year 1990 should be the base year for the estimation and reporting of inventories. However, in accordance with decisions 9/CP.2, 11/CP.4, and 7/CP.12 some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Croatia (1990), Hungary (average of 1985 to 1987), Poland (1988), Romania (1989) and Slovenia (1986).

^b Indirect CO₂ emissions are excluded from the totals in this graph.

^a The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^b Calculated using population data from CRF Table 5.D. World Bank population data was used for Netherlands as it was not presented in CRF Table 5.D.

^a Source of population data: World Bank <https://data.worldbank.org/indicator/SP.POP.TOTL>, downloaded on 19 June 2023.^b The national total includes indirect CO₂ emissions from the atmospheric oxidation of CH₄, CO and NMVOCs for the following Parties: Bulgaria, Canada, Cyprus, Czechia, Denmark, European Union, Finland, France, Japan, Latvia, Lithuania, Monaco, Netherlands, Norway, Poland, Portugal, Slovakia and Switzerland.^c Calculated using population data from CRF Table 5.D. World Bank population data was used for Netherlands as it was not presented in CRF Table 5.D.^d Source of default emission factors: 2006 IPCC Guidelines for National Greenhouse Gas Inventories Volume 5 Chapter 6 Wastewater Treatment and Discharge, page 6.28.
