

Dialogue on the relationship between land and climate change adaptation related matters

Convened by the Chair
of the Subsidiary Body for
Scientific and Technological Advice
of the United Nations Framework
Convention on Climate Change,
Mr. Tosi Mpanu Mpanu

30 November 2020
14:00–16:30 CET

1 December 2020
15:00–17:30 CET

Land provides the fundamental basis for natural and human systems. It plays an important role in the climate system. However, land is under growing human pressure and climate change is adding to these pressures. Better land management can contribute significantly to tackling climate.

This dialogue will explore land management and climate change adaptation practices such as conservation, restoration and sustainable management of land, forests and other ecosystems, regenerative and restorative food systems, and sustainable agricultural and agroforestry practices; delivering support for improved land management; assessing and monitoring land adaptation to climate change; and enhancing policy approaches related to land and climate change adaptation.

Take part, learn and share knowledge and opportunities for strengthening synergies between land and climate change adaptation.
