

# All inputs to the Global Stocktake are now fully searchable and explorable

## Challenge

The first Global Stocktake is vital to capturing the current state of play and identify key levers to meet the goals of the Paris Agreement. With thousands of lengthy input documents - how can we efficiently and effectively identify and connect relevant information to generate useful insights?

## Full text search

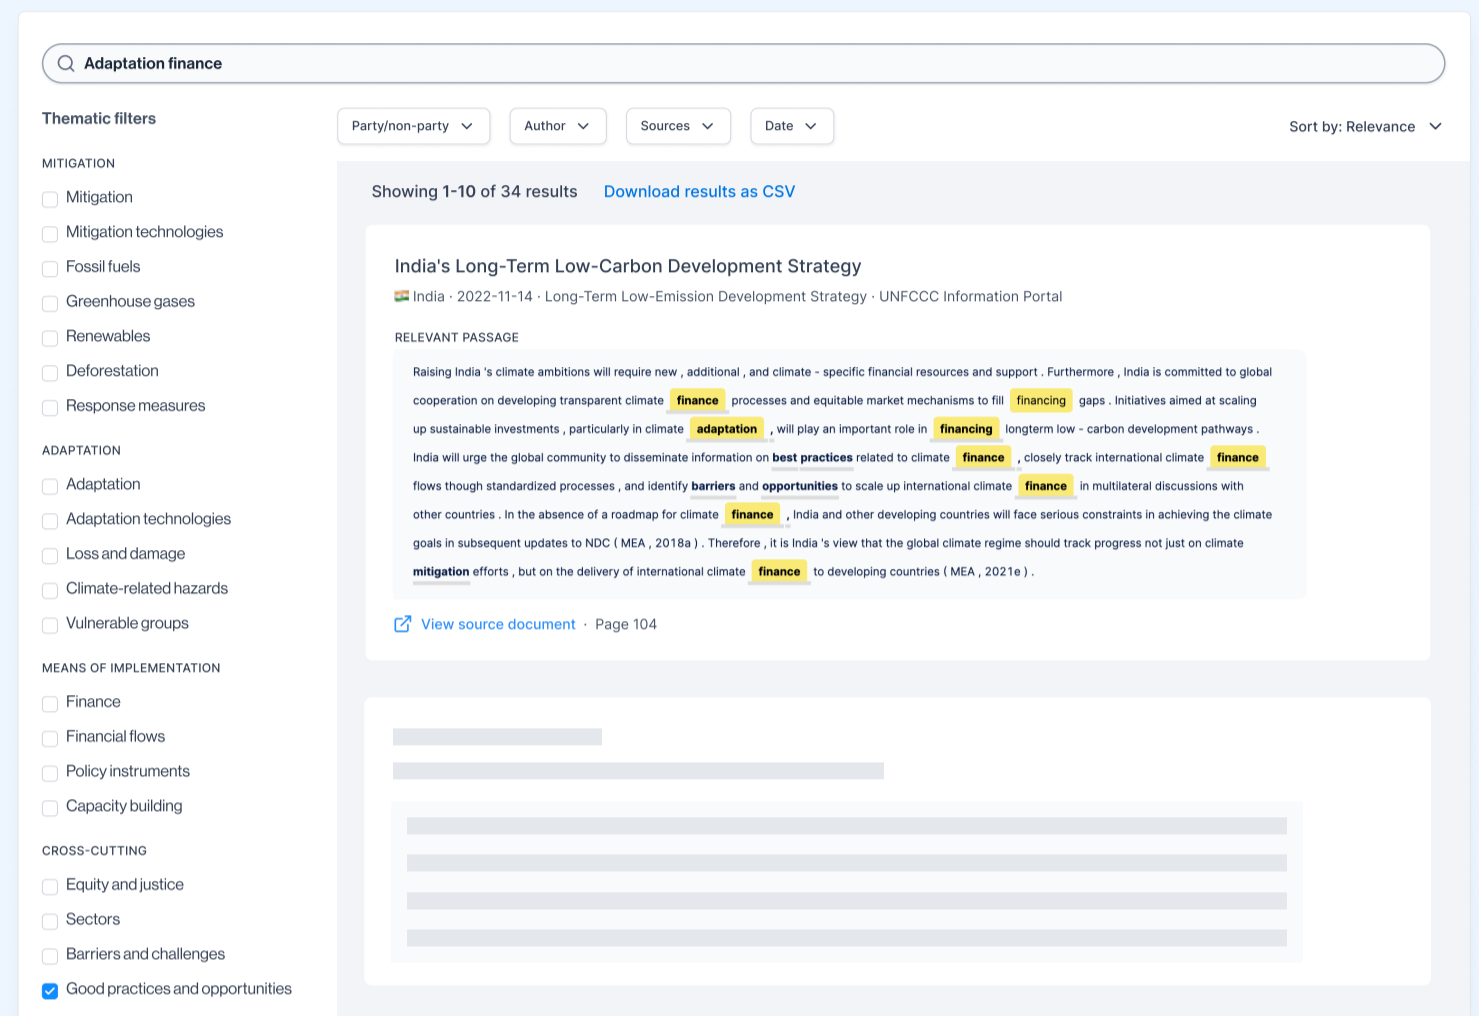

Climate Policy Radar's tool takes the heavy lifting out of research, enabling quick and easy search through the full text of submissions and related documents.

### Over 1,600 documents and 170,000 pages

Access all inputs to the Global Stocktake, including submissions, NDCs, National Communications, Adaptation Communications, IPCC reports, and more

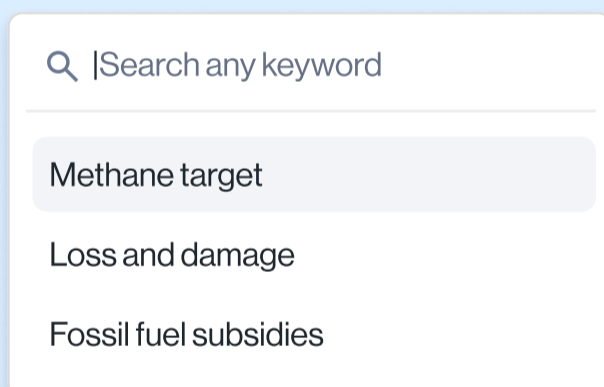

### English translations

Documents from all languages translated to English to increase accessibility

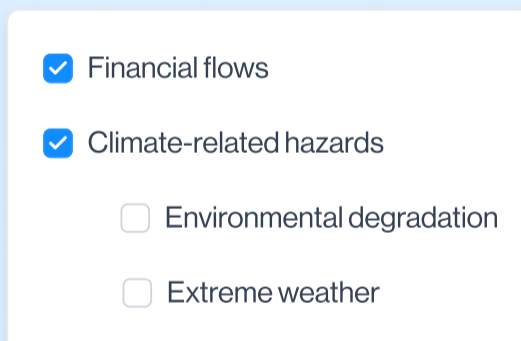

## In-depth search

Enter any term to search the full text of all inputs

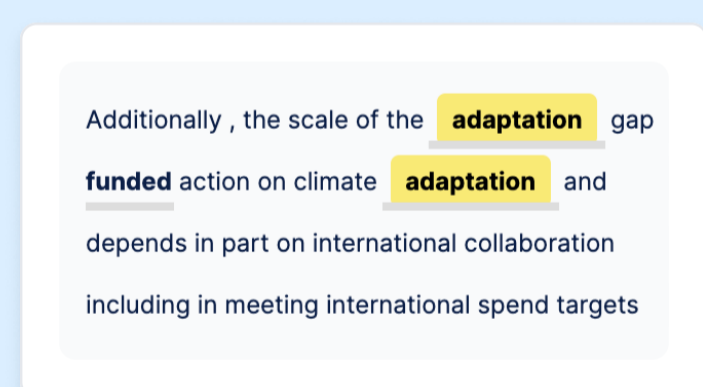

## Advanced filtering

Our machine learning-powered filters highlight themes such as financial flows, climate-related hazards and technologies

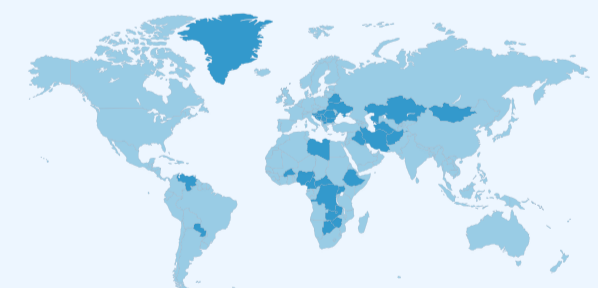

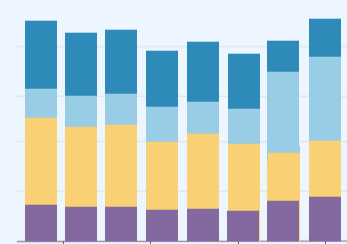

## Identify examples and practices

View the exact passage and go directly to the page in the original document

## Thematic reports

Our reports analyse all inputs to the Global Stocktake and illustrate where, in what context and to what extent key themes and topics appear in the documents submitted by Parties and non-Party stakeholders.

## About Climate Policy Radar

Climate Policy Radar is a not-for-profit climate startup on a mission to organise, analyse and democratise data on climate law and policy using augmented intelligence – a human-centered partnership model of people and AI. We build open and free tools to help discover, understand and generate data-driven climate law and policy insights.

### Explore national laws and policies

Head to [app.climatepolicyradar.org](https://app.climatepolicyradar.org) to search the full text of 3500+ laws and policies from every member state.
