

CROPS Carbon International Ltd

To: UNFCCC Supervisory Board

19 June 2023

Dear Supervisory Board:

CROPS Carbon International LTD is grateful for the opportunity to provide feedback on the Article 6.4 Supervisory Body's [Information note on Removal activities under the Article 6.4 mechanism Version 04.0](#).

CROPS Carbon International Ltd. and CROPS Carbon Harvest Inc. are the international and United States business entities using the Crop Residue Ocean Permanent Sequestration (CROPS) to safely, sustainably, and affordably provide for the removal and storage of carbon for millennia. We also create jobs, support farmers, and benefit the transportation industry. Our process brings environmentalism, business, and communities together. We provide a solution for air pollution due to crop burning and our process works in almost every country worldwide. This allows every nation, large and small, and people of all backgrounds, to participate in positive environmental action.

Our process has been developed over 20 years, including peer-reviewed publications, real-world demonstration projects over 15 years, and extensive economic modeling. We are working towards a **goal of safely removing and storing a billion tonnes of atmospheric carbon annually by 2033.**

In addition to our 2 business units, we retain our original fully qualified XPRIZE Foundation team competing for the \$100 Million Carbon Removal Prize sponsored by the Elon Musk Foundation.

In conclusion, we strongly feel that the present global environmental situation demands that all people, and their governing bodies, be open-minded (in words, actions, and policies) to new and important ways to help mitigate climate change AND not block exploration and implementation of options to rebalance the damage that has and is being done.

Thank you for your efforts and your serious attention to this communique.

All best wishes,

David Mitchell
