

Hybrid workshops relating to A6.2

Common nomenclatures

October 2023, Bonn

Context

- Common nomenclatures are outlined in **Chapter II.B, annex I, 6/CMA.4.** and on **Chapter II.B.d** in the technical paper.
- The **CARP** will house and be used to manage the common list of values.
- They are **a key element of reporting** as per decision 2/CMA.3, annex, chapter IV (Reporting).
- The secretariat and Parties can **identify the need for new common nomenclatures** and request their establishment.
 - Elements are **robust**
 - A **manual review** of the impact on operations is a must.
 - **Assessment** of possible remediations or mitigations.
 - Carried out by **the secretariat**.
 - Consultations with involved **participating Parties**, as necessary.

AEF fields that need a common nomenclature

AEF columns	Type of field	Possible classifications	Issues	Solution
Cooperative approach	ID Assigned by CARP	Unique identifier	None	NA
Party name	List	UNFCCC official list of parties	None	NA
Party ID	List	Alpha-2, Alpha 3 (ISO 3166)	EU is not part of the Alpha-2 or Alpha-3 classification	ISO 3166 + EU ISO 3166 + EUR
Article 6 database record ID	ID Assigned by CARP	Unique identifier	None	NA
Purposes for authorization	List	NDC, IMP, OMP	None	NA
Tracking registry ID	ID Assigned by CARP	Unique identifier	None	NA
Metric	List	By cooperative approach	None	NA
Sectors	List	IPCCC, UNSD, etc.	Relation activity type-sector may be different by countries	Agreed relation by Cooperative approach
Activity type	List	IPCCC, UNEP, CDM, ISO-14030, ISO-14097, etc.		
Underlying unit block ID	ID assigned by parties	Unique identifier inside the party registries	Duplication at international level	Agreed Format

Request process, cooperative approach example

- **Initiation:** Parties engage in a cooperative approach
- **Registration request:** One Party accesses the CARP and fills in the form:
 - Name of the cooperative approach
 - List of participating Parties
- **Verification by the secretariat:** Looks for typographical errors, or duplications and request the other participating Parties in the cooperative approach their approval.
- **Notification to Parties:** Parties involved in the cooperative approach receive a notification indicating if the cooperative approach has been registered successfully or not, as well as the code of that cooperative approach for reporting.

Request process, cooperative approach example

CARP			
Cooperative approach code	Name of the cooperative approach	Participating parties	Date of submission
CA001	Article 6.4 Mechanism	All parties with participation requirements submitted	20/10/2023
CA002	Pacific cooperation	Black, Red, Gold	30/01/2024
CA003	Black-Red space	Black, Red	03/02/2024
CA004	North-South Alliance	Black, Grey, Blue, Green	15/05/2024

Request process, cooperative approach example

The common nomenclature for the cooperative approaches:

- represents the initial position of the ITMO serial number or ITMO international ID.
- is part of the AEF in combination with the cooperative approach's name
- will play a key role in generating the summary tables derived from the AEF

 CARP			
Cooperative approach code	Name of the cooperative approach	Participating parties	Date of submission
CA001	Article 6.4 Mechanism	All parties with participation requirements submitted	20/10/2023
CA002	Pacific cooperation	Black, Red, Gold	30/01/2024
CA003	Black-Red space	Black, Red	03/02/2024
CA004	North-South Alliance	Black, Grey, Blue, Green	15/05/2024

CA002-BK1-BK-1236500-1237500-2022

Based on common nomenclatures

The AEF and the ITMO ID

The international ITMO ID identifies the “**WHAT**”, but it does not inform about the “**FROM WHOM**”, the “**TO WHOM**”, the “**OF WHAT**” or the “**WHEN**” or the “**FOR WHAT**” of an action.

CA002-BK1-BK-1236500-1237500-2022

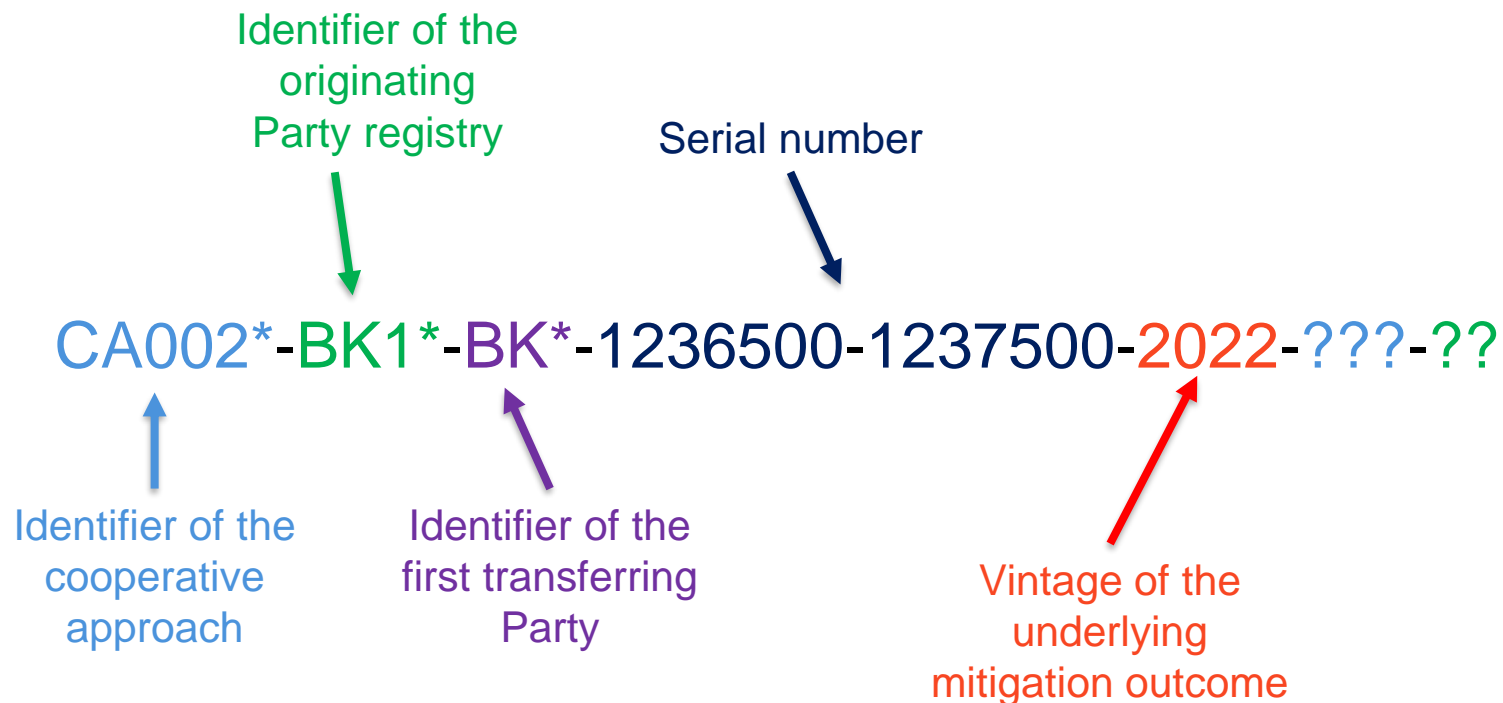

The “**FROM WHOM**”, “**TO WHOM**”, “**FOR WHAT**” and “**WHEN**” are informed in the AEF

IDs	Date of the action	Purpose for authorization*	Transferring party*	Acquiring party*	Metric*	Sector*	Activity type*
	WHEN	FOR WHAT	FROM WHOM	TO WHOM	OF WHAT		

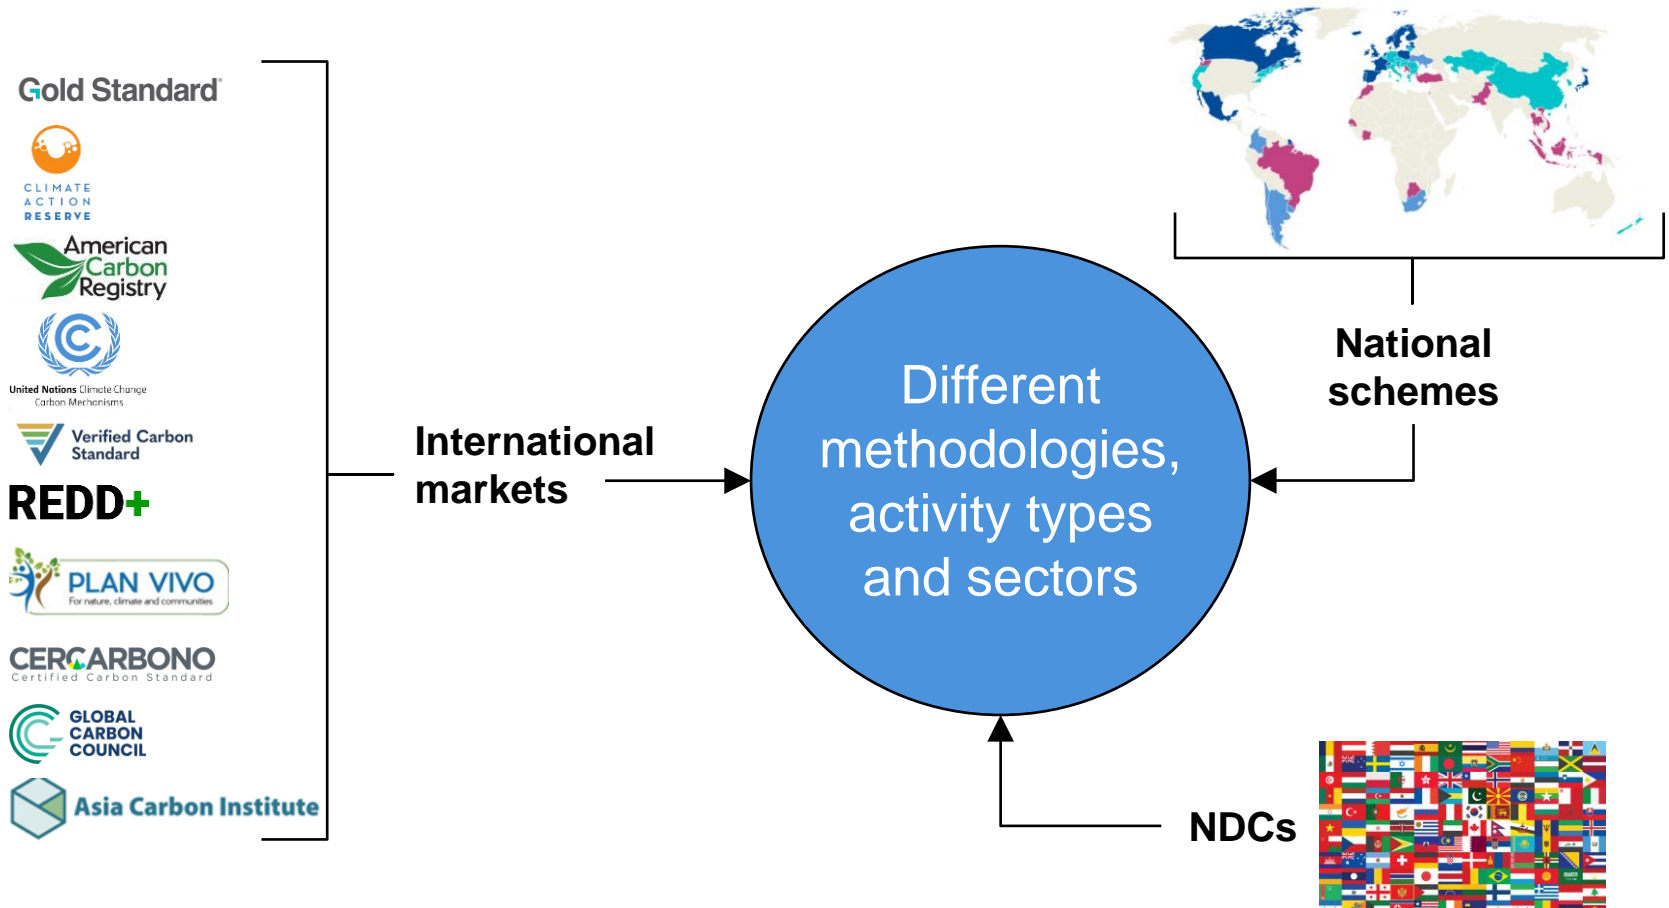

Example of ITMO’s ID that comprise the minimum elements required in 6/CMA.4

Common nomenclatures on ITMO ID

Technical options for sectors, activity types and metrics

Technical options for sectors, activity types and metrics

	Option	Basic concept	Implementing Cost	Operational costs	Complexity
1	Using National Nomenclatures with Secretariat-Maintained Translator System	The complexity inherent in such a configuration only can be alleviated by a translator system upheld by the secretariat	****	****	****
2	Intra-Cooperative Approach Common Nomenclatures for some fields	While this might result in a plurality of nomenclatures, it ensures precision and alignment within each cooperative approach's scope	***	***	**
3	Unified Common Nomenclature for A6.2 based on the ETF	Promotes consistency and comparability, fostering a harmonious understanding among parties and infrastructures	*	**	*
4	Non-GHG, Sectors and Activity Types are not part of the common nomenclature in this iteration	The reporting process would not contain any information related to these fields, until further developed and included in future iterations	*	*	*

Summary

- Common nomenclatures are hosted in the CARP and managed by the secretariat
- A technical solution for the Cooperative approach ID has been defined
- The minimum information required to declare an ITMO ID was determined in 6/CMA.4, but this does not mean that other fields may not be added to the final version of the ITMO ID for transparency purposes
- Decisions on sectors, activity type and metrics need to be taken
