

Climate action for all

Gender equality & women's empowerment for realising rights and resilience

Vision: A just world that values and conserves nature — securing the rights and resilience of all

IUCN knows that gender equality and women's empowerment are prerequisite to meeting conservation, sustainable development and climate goals.

Through interlinked strategies – building knowledge, cooperation and technical support – IUCN demonstrates that gender and climate action go hand in hand:

Filling critical knowledge gaps

Knowledge to inform policy & action

IUCN ensures policymakers and practitioners have the knowledge and data they need on critical gender-environment issues to forge rights-based, socially inclusive, gender-responsive action

Making the case for gender integration

Catalytic cooperation to drive policy change

IUCN supports government and non-government members along with partners and peers to turn the tide on gender inequality for more robust, inclusive and impactful environment decision-making and practice

Providing tailored technical support

Demonstrable trust, tools & advice

Practitioners across climate sectors have technical tools and know-how, with **128** unique requests for support fielded this year alone

- Gender in NDCs analysis
- Gender-based violence & enviro
- IUCN gender analysis guide
- Indicators on gender-climate-security links
- Gender & enviro during COVID-19

At COP26, for example, IUCN and Pakistan will present progress on the first GCF-supported national climate change gender action plan underway, while IUCN gender knowledge, tools and technical guidance drive NDCs and UNFCCC GAP implementation around the world.

In 2022, IUCN and USAID will scale up the RISE Challenge, a grants mechanism to address GBV and environment linkages.
Resilient, Inclusive and Sustainable Environments (RISE)
