How does transparency link to ACE principles?

#Together4Transparency

TRAINING

✓ Training experts through self-paced courses which aim to strengthen institutional arrangements in developing countries, improve data quality, and increase the transparency of information reported.

PUBLIC AWARENESS

✓ Raising awareness of the benefits of transparency in tracking emissions and impacts, identifying needs and priorities, and tracking progress towards implementation and goals.

INTERNATIONAL COOPERATION

✓ Promoting multi-level cooperation between governments, implementing agencies, research and academic institutions, private sector and support providers for on the ground implementation.

PUBLIC PARTICIPATION

✓ Enabling effective participation of all relevant stakeholders by inviting them to share perspectives and concrete inputs, including by taking part in the domestic development and review of transparency reports. Encouraging non-Party stakeholders to scale up their own transparency and accountability efforts.

EDUCATION

✓ Promoting the key role of climate change education and of reporting on such activities within countries' efforts on Article 12 of the Paris Agreement, as well as in National Communications.

PUBLIC ACCESS TO INFORMATION

✓ Showcasing information and data reported by countries and reviewed by experts on their GHG emissions, progress towards targets, mitigation actions, climate change impacts and adaptation, and support.

#Together4Transparency unites all stakeholders involved in preparing for and implementing the Enhanced Transparency Framework (ETF), raising awareness of the role of data, information and collaboration for the success of the Paris Agreement.

Parties	NGOs	Media	Experts	Youth	IGOs	Business
What? Transparency helps countries understand the potential for ambitious mitigation and adaptation action while identifying and responding to their needs.	**What?** Transparency offers new opportunities for cooperation and engagement to build trust around the process.	**What?** Transparency raises public awareness, helps explain the complexity of climate change and sheds light on climate action.	**What?** Transparency requires qualified experts to ensure availability of accurate data and information on GHG emissions, progress toward targets and levels of support.	**What?** Transparency offers young people the tools to have more certainty about their future and the future of the planet.	**What?** Intergovernmental organisations, UN agencies and other multilateral institutions play a key role in enhancing transparency of national and international climate actions.	**What?** Transparency helps businesses track progress toward achieving their net zero pledges and climate targets.
How? By establishing necessary arrangements to ensure robust data is available, financial flows are aligned towards sustainable development and support is directed and delivered.	**How?** By providing access to better and more consistent data to inform conversations on progress on mitigation, adaptation and means of implementation and support.	**How?** By generating, sharing and analysing reliable data which increases accountability of all countries in meeting their Paris Agreement goals.	**How?** Through reporting and review of Parties' national reports, experts contribute to global accountability and building trust on actions taken.	**How?** By offering the opportunity to improve their understanding of climate change, collaborating and advocating for intergenerational equity and influencing decision-makers for greater ambition.	**How?** By working in collaboration with Parties to strengthen domestic institutional arrangements, systems and capacities to generate and analyse robust climate data.	**How?** By helping them to make sound investment choices, improve efficiency, reduce GHG emissions, identify and address risks and align financial flows.
