

Overview of progress, challenges and opportunities related to identifying needs and accessing means of implementation for climate action in agriculture and food security

Liva Kaugure.
Natural Resources Officer,
Office of Climate Change Biodiversity and Environment, FAO

Second in-session workshop on

Progress, challenges and opportunities related to identifying needs and accessing means of implementation for climate action in agriculture and food security, including sharing of best practices

Sharm el-Sheikh joint work on implementation of climate action on agriculture and food security (SJWA)

Means of Implementation

UNFCCC

- **Article 4: Commitments**

4.1 (c): “Promote and cooperate in the **development, application and diffusion**, including **transfer, of technologies, practices and processes**”

4.5: “developed country Parties (...) to promote, facilitate and finance, as appropriate, the **transfer of, or access to, environmentally sound technologies and know-how** to other Parties (...) support the development and enhancement of **endogenous capacities and technologies** of developing country Parties. ”

- **Article 11: Financial Mechanism**

- “Provision of financial resources on a grant or concessional basis, including for the transfer of technology (...)”

Paris Agreement

- **Article 2: Objectives**

2.1 (c): “Making finance flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development”

- **Article 9: Finance:** “Developed country Parties shall provide financial resources to assist developing country Parties with respect to both mitigation and adaptation in continuation of their existing obligations under the Convention.”

- **Article 10: Technology development and transfer:**
10.1: “(...) importance of fully realizing technology development and transfer in order to improve resilience to climate change and to reduce GHG”

- **Article 11: Capacity-building**

- **Article 13: Transparency:** developing country Parties to “provide information on financial, technology transfer and capacity-building support”

Under the UNFCCC, means of implementation (MoI) refer to the access to climate finance, technology development and transfer, and capacity-building

Means of Implementation

KJWA

SJWA

- The KJWA highlighted "*the need to identify modalities for addressing challenges in and exploring opportunities for accessing existing means of implementation*" (Decision 3/CP.27, para. 6)
- Emphasized "*the urgent need to scale up action and support*"
- Recognized that "*scaling up implementation requires enhanced knowledge-sharing on best practices, access to finance, technology development and transfer, and capacity-building*"

- Invites current and future COP Presidencies, high-level champions and other actors to take into account the KJWA recommendations, and "*to promote the sharing of information and knowledge on best practices and means of implementation*" (Decision 3/CP.27, para. 13)
- Second annual synthesis report to address "***challenges in and barriers to accessing support for finance, technology development and transfer, and capacity-building relevant to climate action on agriculture and food security***" (FCCC/SB/2025/L.2, para. 5)

Solutions are context-specific and take into account national circumstances

Importance of considering the vulnerability of farmers and other groups vulnerable to climate change impacts, and consider the role of farmers as key agents of change

DEFINITION

“Local, national or transnational financing—drawn from public, private and alternative sources of financing—that seeks to support mitigation and adaptation actions that will address climate change” (UNFCCC, n.d.)

United Nations
Framework Convention on
Climate Change

UNFCCC Financial Mechanism:

- [Global Environment Facility \(GEF\)](#) - 1994
- [Green Climate Fund \(GCF\)](#) COP16, 2010
- [Fund for Responding to Loss & Damage \(FRLD\)](#) COP29, 2024
- [Special Climate Change Fund \(SCCF\)](#) and
- [Least Developed Countries Fund \(LDCF\)](#) managed by the GEF
- [Adaptation Fund \(AF\)](#) established under the Kyoto Protocol in 2001.

Operating Entities

*“**Climate finance** aims at reducing emissions and enhancing sinks of greenhouse gases, aims at reducing vulnerability, increasing adaptive capacity, and mainstreaming and increasing resilience of human and ecological systems to negative climate impacts, and includes financing for actions identified in a country’s NDC, adaptation communication, NAP, LT-LEDS, or other national plan for implementing and achieving the goals of the Paris Agreement and the objective of the Convention” (SCF, 2024)*

➤ **“Common but differentiated responsibility and respective capabilities”**

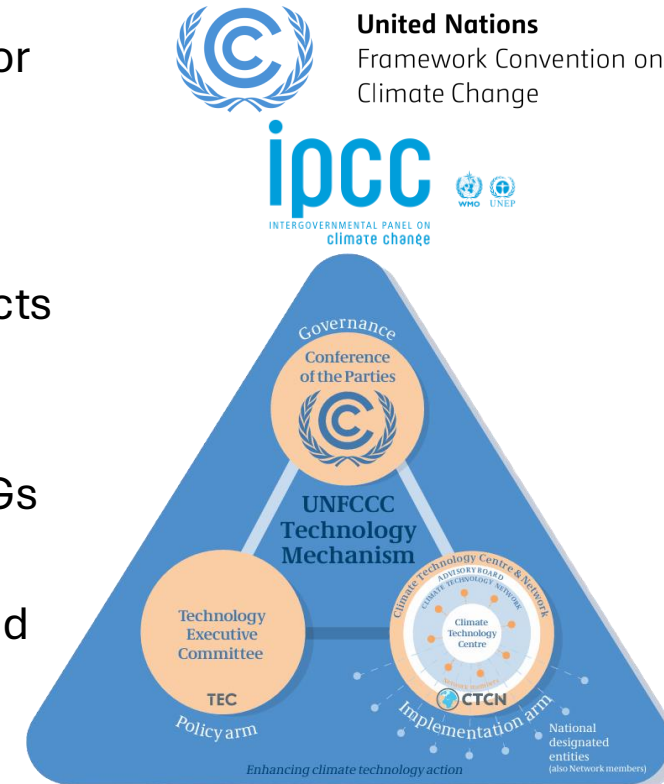

Standing Committee on Finance (SCF) established at COP16 in 2010

➤ **2025 SCF Forum on “accelerating climate action and resilience through financing for sustainable food systems and agriculture”**

DEFINITION

- **Climate technology:** a piece of equipment, technique, practical knowledge or skills for performing a particular activity (IPCC, 2000).
- **Climate adaptation technology:** includes all technologies that support adaptation to climate variability and climate change. It also refers to the use of technology to reduce vulnerability or strengthen the resilience of natural or human systems to climate impacts (Traerup & Bakkegaard, 2015)
- **Climate mitigation technology:** covers technologies and practices that reduce greenhouse gas (GHG) emissions or increase the ability of carbon sinks to absorb GHGs from the atmosphere (Dhar, Desgain & Narkeviciute, 2015)
- **Technology for sustainable agrifood systems:** refers to the application of science and knowledge to develop techniques that deliver products and services that improve the sustainability of agrifood systems (FAO, 2022)

Technology Executive Committee (TEC) & the Climate Technology Centre and Network (CTCN): support development, deployment, and scaling of technologies and innovations

DEFINITION

Framework for capacity-building (Decision 2 and 3/CP.7): *Build, develop, strengthen, enhance and improve capabilities to implement the Convention*

- **Country-driven:** specific needs, conditions, priorities and circumstances
- **Continuous, progressive and iterative process**
- **Effective, efficient, integrated and programmatic**
- **Builds on existing** processes and endogenous capacities
- **“Learning by doing”:** demonstration projects as a key modality
- **Coordinated at all levels** (national, regional and international), mobilizing existing institutions and private sector
- Individual, Institutional and Systemic support
- **Maximize synergies** between across global environmental agreements

United Nations
Framework Convention on
Climate Change

Communicated through

- National communications (NC)
- Biennial Update Reports (BURs)
- National Adaptation Plans (NAPs)

UNFCCC

- Nationally Determined Contribution (NDC)
- Biennial Transparency Report (BTR)

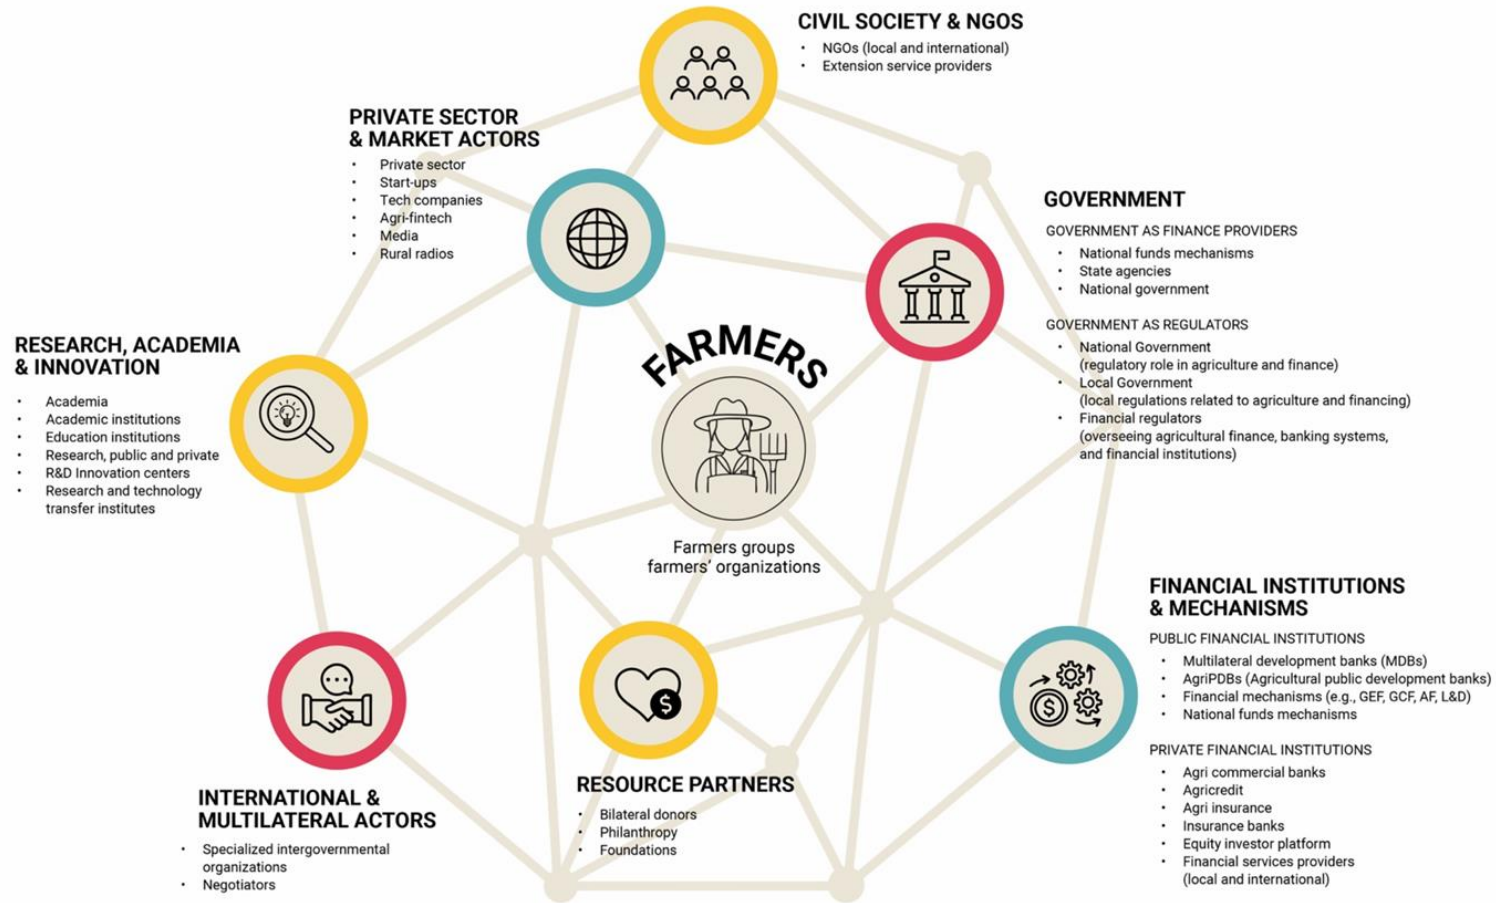

Paris Agreement

Paris Committee on Capacity-Building (PCCB): identify capacity gaps and needs and potential solutions, including enhancing the coherence and coordination
Durban Forum on Capacity-building

Means of Implementation

Multistakeholder engagement is crucial for the implementation of Climate Action
Recognizing farmers as key agents of change

Food and Agriculture
for Sustainable Transformation Initiative

FAST

Introduction

The world's agriculture and food systems, in short agrifood systems, are increasingly vulnerable to climate change. The evidence on the impacts of climate change on agrifood systems is growing worldwide, which are more prominently in developing countries: rising temperatures, heat waves, droughts and floods, changes in rainfall patterns and extreme events affect agriculture more than any other sector. These reduce yields, cause damages, and induce changes in land suitability for agriculture. New pests and diseases appear where they were unknown. Climate change exacerbates the risks of hunger and malnutrition among the most vulnerable groups. In this context, with less than eight years left until 2030, the urgency to address climate change is increasing.

Agrifood systems across the world offer a unique opportunity to address climate change from two perspectives. One, by building resilience across agrifood systems, we ensure their adaptation to climate change. At the same time, sustainable agricultural systems offer many opportunities to reduce greenhouse gases emissions. Implementation of climate resilient agrifood systems requires political will, international cooperation, generation and exchange of knowledge and best practices, as well as financial resources to support producers and value chain actors across the world to operate the necessary transformations.

Recent assessments¹ show that availability and access to climate finance at both farm and country levels remains largely insufficient. Addressing this need, the aspirational goal of FAST is to implement concrete actions that would result in **improving the quantity and quality of climate finance contributions to transform agriculture and food systems**

Climate-related development finance to agrifood systems

Global and regional trends
between 2000 and 2021

Climate-related development finance in the agriculture and land use sector between 2000 and 2020

BRIEF UPDATE
Authors: Giulia Maria Galbiati, Martial Bernoux

Climate-related development finance in the agriculture and land use sector between 2000-2019

SPECIAL UPDATE
Authors: Buto, O., Galbiati, G.M., Alekseeva, N. & Bernoux, M.

Introduction

This document is a special update of the recent FAO analysis, "Climate-related development finance in the agriculture and land use sector – global and regional trends between 2000 and 2018"¹ and includes newly released data for 2019. Climate-related development finance is a fundamental element of the global development agenda and has been accelerating in the past years. The recent FAO analysis identified that between 2000 and 2018 the share of global climate-related development finance in the agriculture and land use sector decreased, passing from an average of 45 percent of the total flows at the beginning of the millennium, to 24 percent in 2013 where it has remained. The total sum of contributions to the agriculture and land use sector between 2000 and 2018 amounted to USD 122 billion, representing 26 percent of the global climate-related development finance flows to all sectors. The potential impact of the COVID-19

Climate-related development finance to agrifood systems

Global and regional trends
REPORT 2025

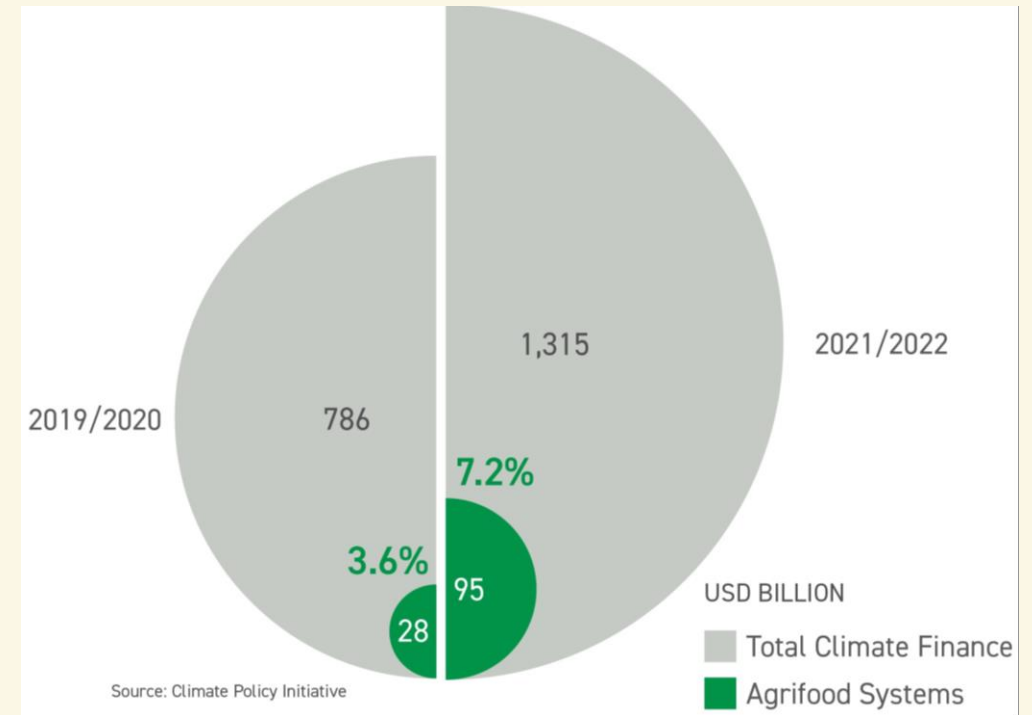

Latest Evidence

Climate finance to agrifood systems is insufficient

Despite the surge in total climate-related development finance, the **share directed to agrifood systems has declined** significantly, falling from 47% in 2000 to 19% in 2023.

Agrifood systems receive a tiny fraction of total global climate finance tracked at the project level.

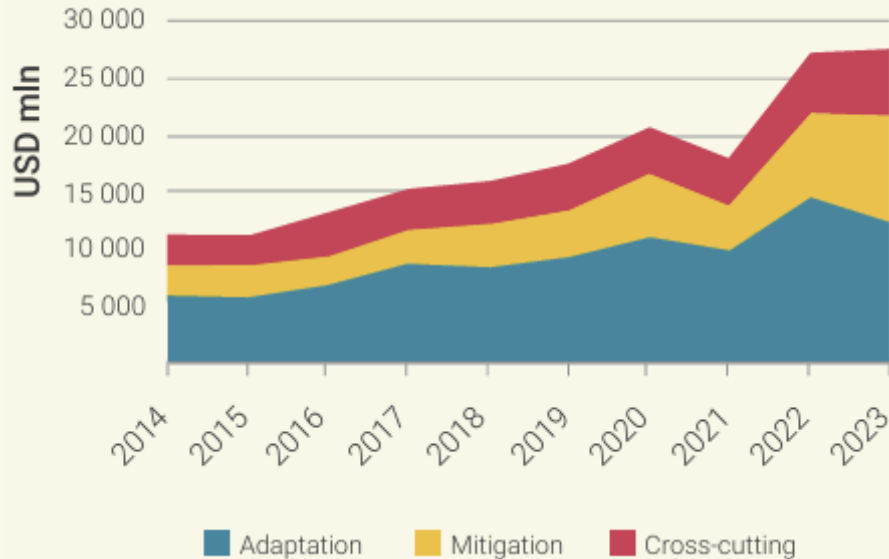

Galbiati, G.M., Caputo, I., Brierley, I., Ducastel, A. & Bernoux, M. 2025. Climate-related development finance to agrifood systems – Global and regional trends. Report 2025. Rome, FAO. <https://doi.org/10.4060/cd7500en>

CLIC, 2025. Landscape of Climate Finance for Agrifood Systems 2025. Available at: <https://climateshotinvestor.org/publications/landscape-of-climate-finance-for-agrifood-systems-2025>

The Quantity and Quality: A Dual Imperative for Climate Finance

Agrifood systems' allocations are primarily directed to adaptation (45%), followed by mitigation (34%) and cross-cutting objectives (21%)

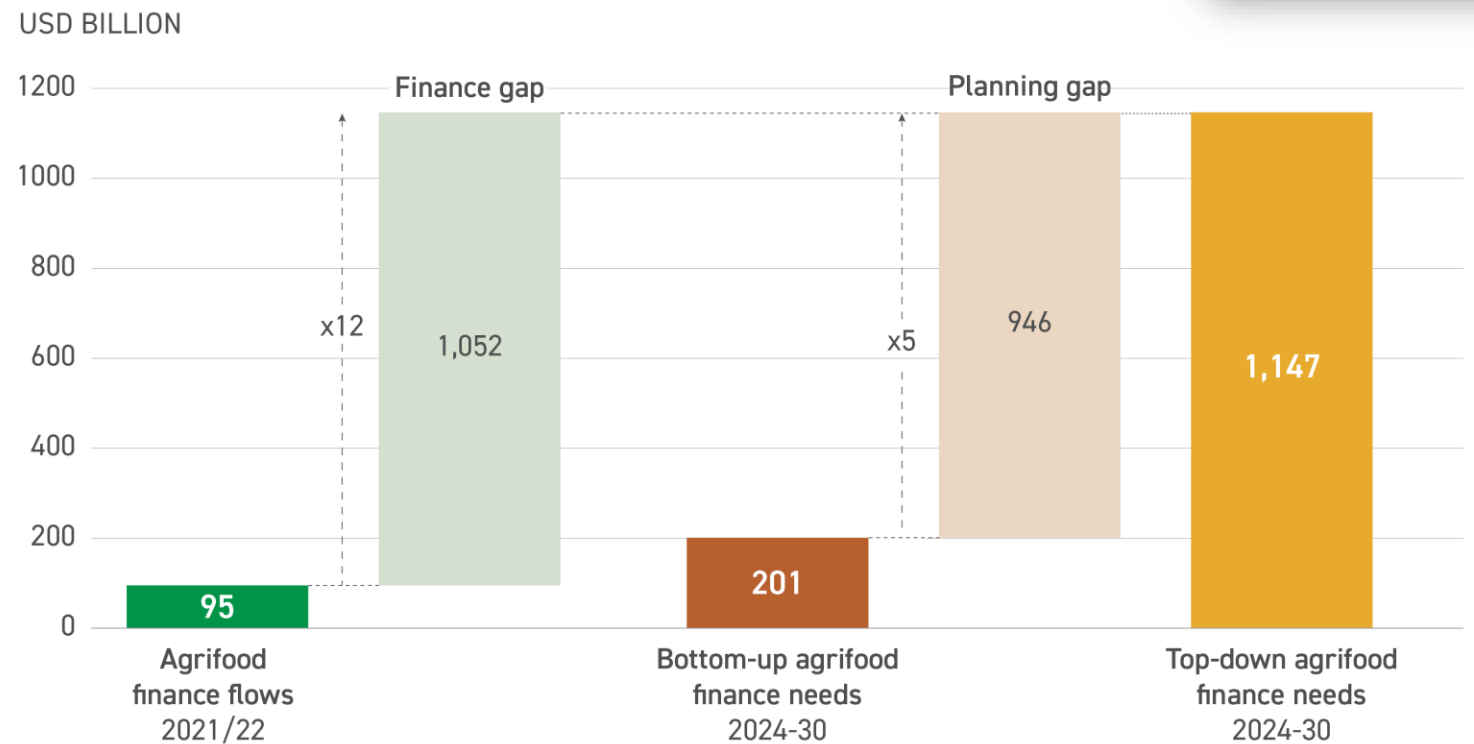

While debt instruments are growing across regions, grants remain critical for the most vulnerable, underscoring the need for a tailored mix of finance instruments

Three Critical Gaps Identified:

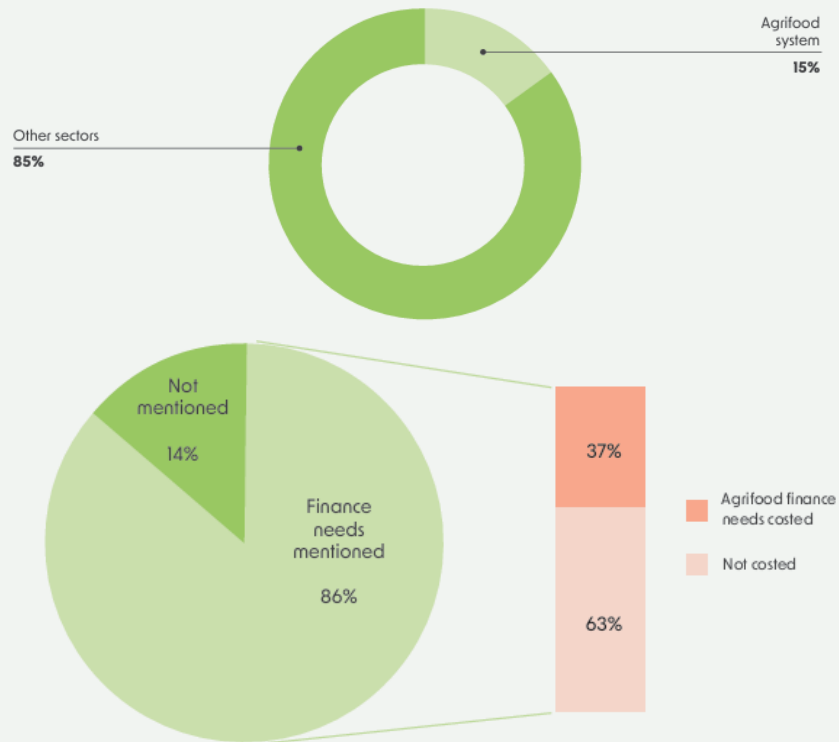

- **Finance Gap:** Global climate finance for agrifood systems falls far short of what is needed.
- **Planning Gap:** National planning underestimates the potential of agrifood actions for delivering adaptation and mitigation ambition.
- **Data Gap:** Inadequate data impedes effective tracking, decision-making, and accountability.

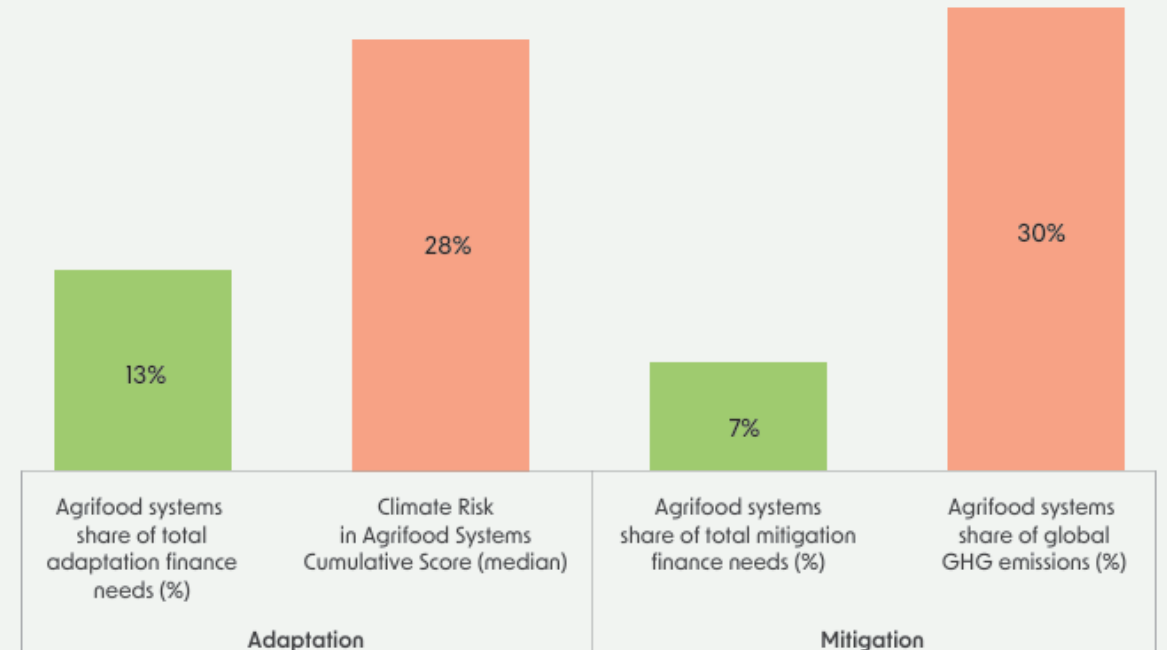

Updated in May 2025 from [CPI & FAO. 2024](#)

Planning gap: Agrifood systems' potential remains underestimated in country's finance needs

Only 37% of NDC 2.0 include quantified agrifood finance needs, yet representing just 15% of total reported finance needs

Agrifood systems account for 30% of global GHG emissions and face high climate risk, yet represent only 13% and 7% of total NDC finance needs for adaptation and mitigation

2025 SCF Forum on *accelerating climate action and resilience through financing for sustainable food systems and agriculture*

COP30 underscored that “*accelerating climate action and resilience through **financing for sustainable food systems and agriculture is essential**, including for protecting biodiversity and supporting vulnerable communities*”;

Key barriers and challenges

- High-risk and low-return perception, despite significant climate action potential
- Limited collateral, insecure land tenure and high transaction costs restrict investments
- Information gaps, limited aggregation capacity and a lack of direct access
- Accreditation and fiduciary requirements, fragmented funding landscapes, and difficulties in aligning available financial instruments with local needs
- Overlapping ministerial mandates, limited capacity to prepare bankable projects and weak coordination between climate and agricultural strategies

Need to scaling up grant-based, concessional and blended finance approaches, alongside capacity-building, technical assistance and enabling environments, particularly for small-scale farmers, Indigenous Peoples, local communities and women.

Closing the triple gap is essential to improve access to means of implementation for climate action in agriculture and food security

Improve Estimation of Needs

- Governments must re-evaluate targets and investment frameworks.

Equity & Inclusion

- Climate finance needs to address inequalities, particularly for smallholder farmers and women and ensure a Just Transition
- Multi-year, inclusive finance options aligned with national priorities and local knowledge, co-created with vulnerable groups to empower them as active decision makers

FOOD AND AGRICULTURE FOR SUSTAINABLE TRANSFORMATION

FAST Partnership

**IMPROVE THE QUANTITY
AND THE QUALITY OF
CLIMATE FINANCE**

Closing the triple gap is essential to improve access to means of implementation for climate action in agriculture and food security

Technology Development & Transfer

Climate Technologies in Agrifood Systems

IPCC, 2000

Clements *et al.*, 2011
Uprety *et al.*, 2012

TEC, 2014a, 2014b, 2017

FAO & UNFCCC, 2024
Vorkapic *et al.*, 2025

The agriculture sector is consistently prioritized by developing country Parties.

- **87% of Parties** identify AFOLU as a priority for adaptation in their TNAs and **35% for mitigation**, making it one of the most prioritized sectors (UNFCCC, 2020)
- **Despite being a prioritized sector, integrated uptake of climate technologies in agrifood systems remains limited**, as underscored by the first Global Stocktake

PROGRESS

Growing but insufficient financial flows

- Climate-related development finance to agrifood systems-related technology totalled **USD 50 billion** between 2013–2022, representing **29% of** total climate finance to the sector
- Asia attracted the most flows (36%), followed by Africa (29%) and Latin America (15%)
- Of the **6 437 agrifood system-related climate technologies** identified in the NDC 2.0, **only 14 percent have an estimated cost**.
- Almost half (45 percent) are **fully dependent on the provision of external support**, and **80 percent** in lower-income countries are either partially or fully conditional

Main challenges for Climate Action:

Evidence based technology uptake

- **A fundamental barrier to technology adoption** remains the weak link between agriculture context, poorly recognized **value chain needs and gaps** beyond the farm gate (post-harvest, processing, distribution) and the identification of a "set" of technology requirements to enable value chain performance and uptake

Financial & Economic Barriers (reported in 100% of Parties' TNAs) (UNFCCC, 2020).

- Persistent **gap between technological potential and implementation** due to insufficient funding, particularly in developing countries
- **High upfront costs and long payback periods** deter private investors

Policy, Legal & Regulatory Barriers (cited by 98% of Parties) and capacity & institutional

- Insufficient or weakly enforced **legal and regulatory frameworks**
- **Technological lock-ins** creates resistance to adopting alternatives
- Weak linkages between financial institutions and agrifood actors (demand and supply)

Climate Technologies in Agrifood Systems

Strengthening agrifood sector technology needs

- **The GST has highlighted the gap in uptake. FAO is working closely on addressing this gap for agrifood systems to increase integrated uptake across agrifood value chains.**
- **New round of NDCs (2025) can identify and embed agrifood technology needs but the link should be strengthened**
- Focusing on **barriers to adoption** in the TNA/ TAP process brings more attention to the issue of access to technologies
- Targeting **financial flows from all sources** should be increased and improved to appropriately address technology needs.
- **Enhancing coordination** between climate change and agrifood policies, programming and investments

Context-specific assessments tailored to local conditions, farming systems, and the socioeconomic situations of producers, taking into account gender, inequality and the need for social inclusion

Farmer Field Schools (FFS) have reached over 20 million farmers across 119 countries — a proven model for scalable, participatory technology transfer, including digital literacy for rural women

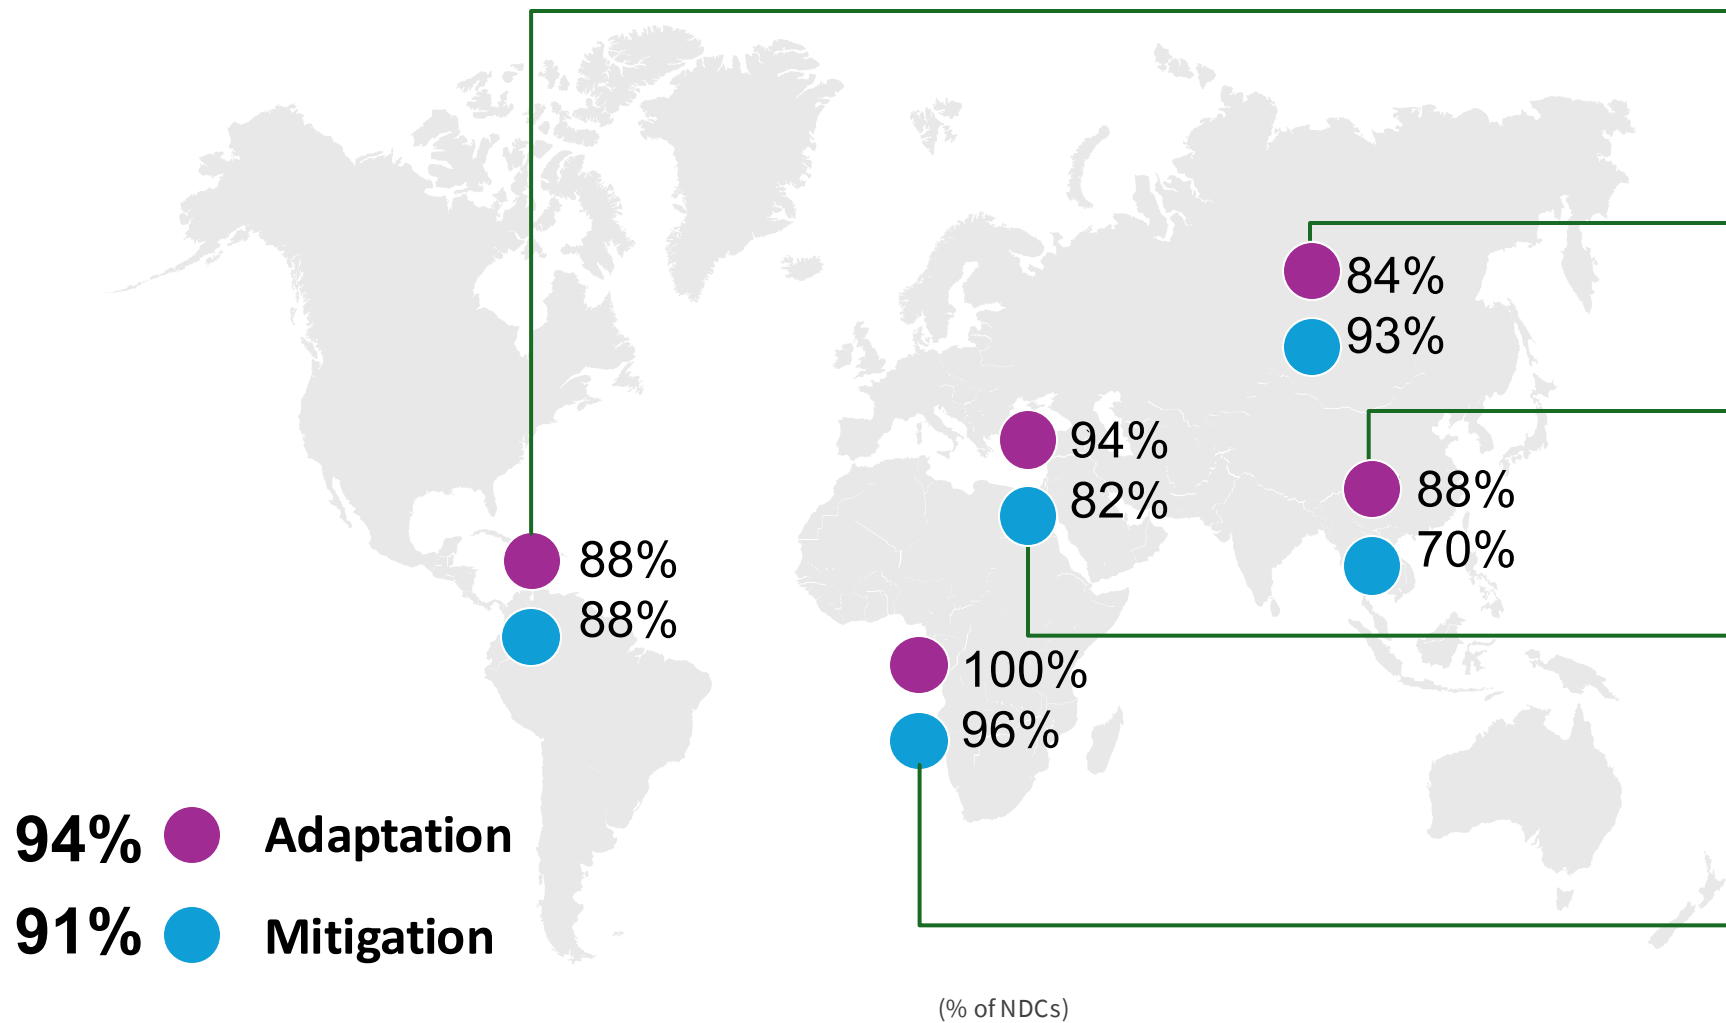

Public finance plays a catalytic role in de-risking investments, supporting early-stage and locally adapted technologies and crowding in private capital

Multilateral development banks and climate finance mechanisms are essential for piloting and scaling up climate technologies and strengthening national innovation systems (TEC and FAO, 2024).

Policy and Governance

Agrifood systems feature also prominently in the **NDCs** as the custodians of critical adaptation and mitigation solutions

Latin America & Caribbean

Europe & Central Asia

Asia & Pacific

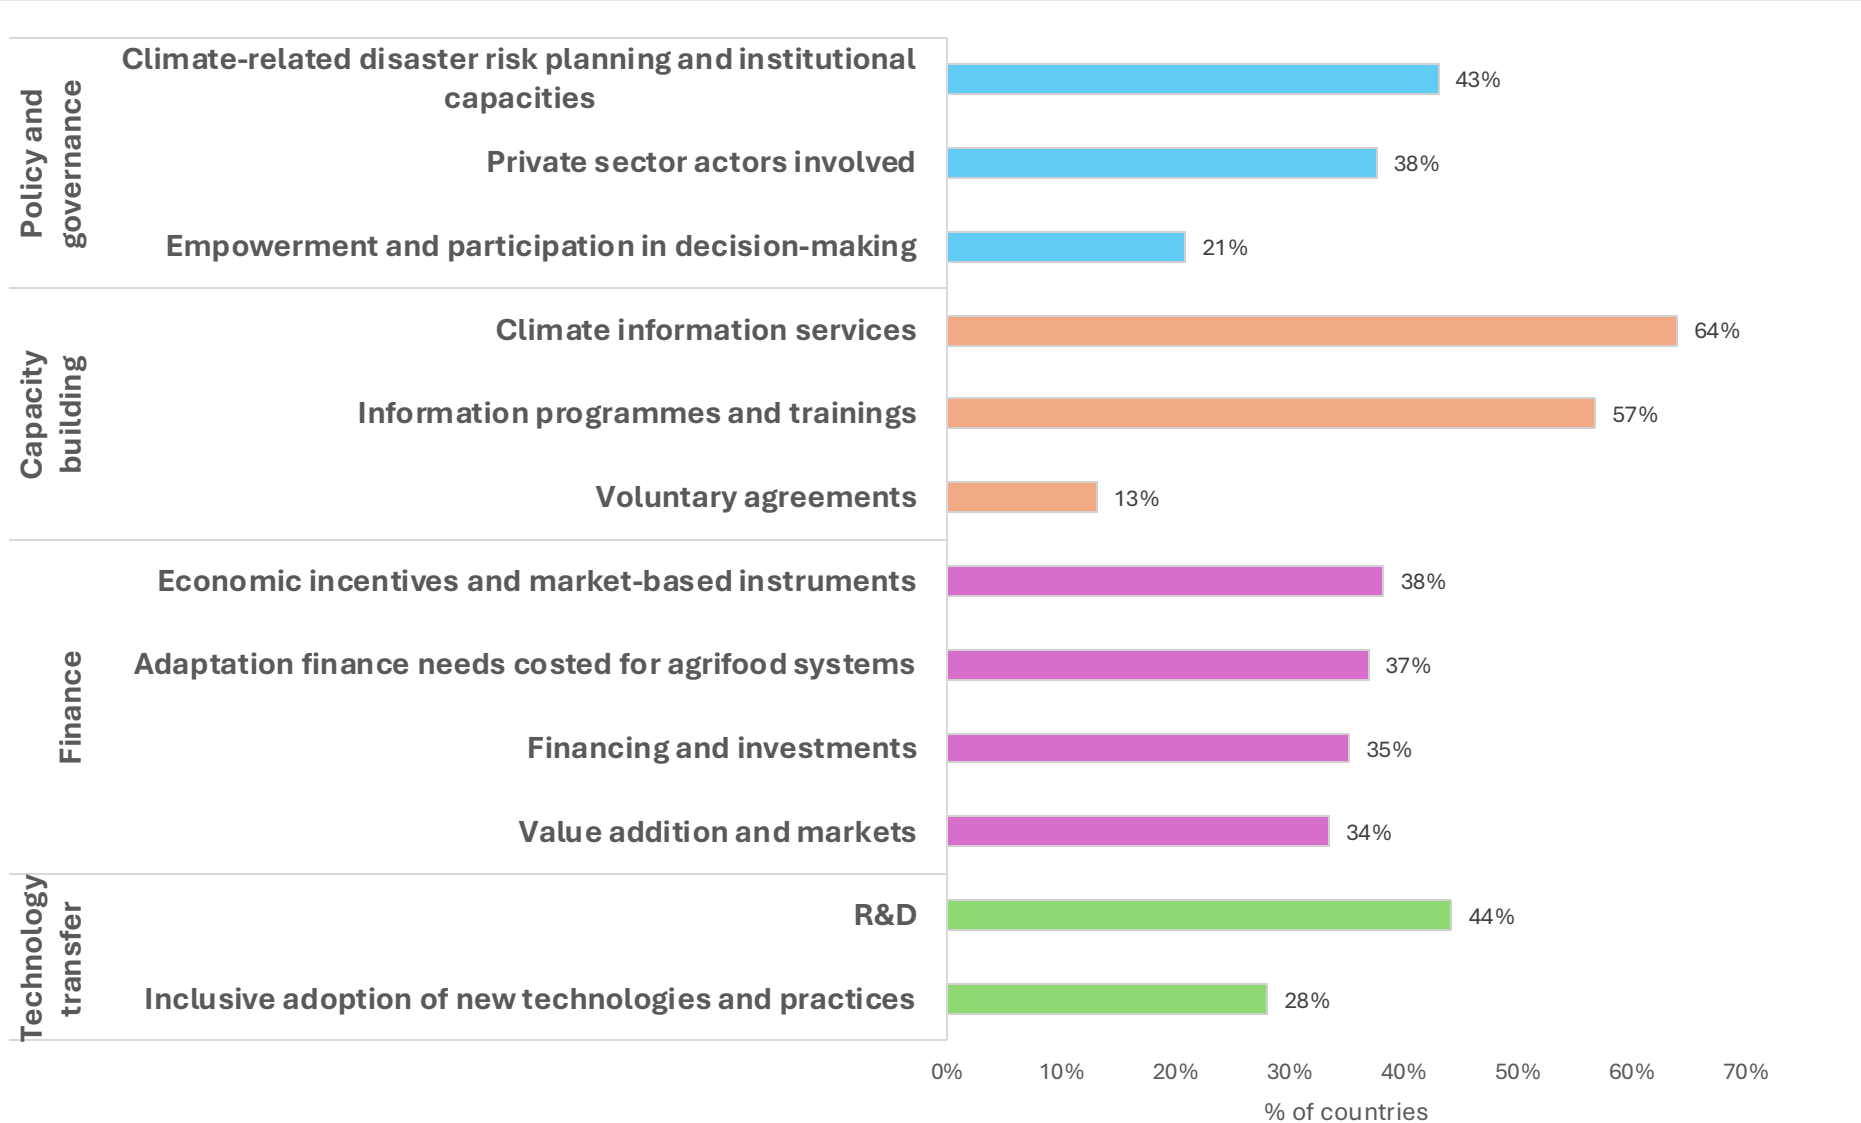

Near East & North Africa

Sub-Saharan Africa

Policy and Governance

Country priorities, needs and targets on **means of implementation** for agrifood systems are also reflected in NDCs

Not working in isolation: Opportunities for implementation of climate action under the SJWA

SB62 requested the Secretariat to synthesize, in the second annual SJWA report, information from Parties, constituted bodies, financial entities, COP Presidencies and High-Level Champions on **financial allocations and needs, and challenges and barriers to accessing** finance, technology transfer and capacity-building for climate action in agriculture and food security

Sharm el-Sheikh Online Portal

Sharm el-Sheikh online portal.

The Conference of the Parties established the Sharm el-Sheikh online portal under the Sharm el-Sheikh joint work on implementation of climate action on agriculture and food security for sharing information on projects, initiatives and policies for increasing opportunities for implementation of climate action to address issues related to agriculture and food security (decision 3/CP.27).

Credit:CCO

How to submit

Parties and observers can submit information on projects, initiatives and policies for increasing opportunities for implementation of climate action to address issues related to agriculture and food security to be made available through this portal.

To do so, national focal points (for Parties) and designated contact points (for admitted observers) are invited to submit relevant information by filling the following template and sending it along the actual submission document(s) to the following email: sjwa@unfccc.int.

How can Parties and observers submit information to this online portal?

Annual synthesis report by the secretariat

Summary

This report provides a synthesis of the inputs received from the constituted bodies and financial and other entities under the Convention that undertook activities related to the Sharm el-Sheikh joint work on implementation of climate action on agriculture and food security in 2025. The report also synthesizes submissions from relevant international organizations, representatives of initiatives of Presidencies of the Conference of the Parties, and the high-level champions on activities related to the joint work undertaken in 2025.

Opportunities for Climate Action:

- Transforming food systems offers major **mitigation and adaptation** potential with co-benefits for health, livelihoods, and biodiversity.

- Effective interventions include:
 - Sustainable land management (e.g., agroforestry, soil health)
 - Climate-resilient practices and technologies
 - Demand side: Dietary shifts and reducing food loss/waste

Climate change significantly impacts food production and security, and transformative changes are needed to reduce emissions, increase resilience, and ensure food security for all.

BUT effective implementation demands alignment among **science, policies, markets, institutions, and governance.**

Science-Policy Interface: Placing Agrifood Systems at the Heart of climate action

FAO-IPCC Co-Sponsored Expert Meeting on Agriculture and Food | 2-5 June 2026

Synthesizing the latest science on agriculture and food systems under climate change to provide targeted inputs to the IPCC Seventh Assessment Report (AR7), while informing the implementation of climate action.
