

3rd Capacity-building Hub Finance and Technology Day

UNEP-DTU Partnership Tools and Methodologies to Implement Sustainable Energy Systems in Cities, Districts and Buildings

Event Summary

This event focused on the methodologies and tools developed to facilitate city engineers and relevant stakeholders on project development of district and building energy systems with efficiency and cost-effectiveness in mind. The panelists presented the state-of-art tools and training modules that can be used as start-up materials for municipalities to understand the benefits and requirements of different kinds of energy systems in various scales. The team of UDP, DEA, and DENA have been working on these topics for capacity-building on the basis of their experience and best practices both in developed countries and developing countries.
