Infosys' Journey to Carbon Neutrality
India

Infosys is India's second-largest Information Technology company, and one of the first companies of its type to commit to carbon neutrality. In 2011, Infosys made a pledge to become carbon neutral by 2020. With over 229,000 employees and clients in 46 countries, Infosys has sought to address its significant carbon footprint in all aspects of its global operations.

Infosys is building new energy-efficient buildings and upgrading its existing buildings, is transitioning to 100% renewable energy, has placed an internal price on carbon against which it assesses its projects and investments, and runs an offset programme that works with communities to reduce emissions and contribute to sustainable development. All emissions are tracked using software applications and audited by a third-party verifier.

Key Facts
- Through its energy efficiency programs, Infosys has reduced 55.05% of its per capita energy consumption since 2008.
- 44% of Infosys' electricity requirements are met through renewable sources. The company aims to transition to 100% renewable energy by 2020.
- Over 100,000 rural families have benefited directly from Infosys' offset programme since 2016, while another 25,000 families are set to benefit from a project on biogas-fueled cooking and organic farming.
