Webinar on the COPERT model to support National Greenhouse Gas Inventories from developing countries under the Enhanced Transparency Framework of the Paris Agreement

UNFCCC
Transparency Division

23 – 27 September 2024

Menouer BOUGHEDAoui

Day 1

Monday 23 September 2024

15:00 – 17:00 (Bonn Time)

Session 1

Opening Session

- Opening Remarks: objectives, expectations
- Modalities, Procedures and Guidelines for Transparency Framework of Paris Agreement
- Reporting requirements to estimate GHG emissions from anthropogenic sources (Energy - Road Transportation)

Quiz on Mentimeter

Challenges faced by developing countries to estimate GHG emissions from road transportation in line with 2006 IPCC GLs

<https://www.menti.com/alst8x8wzy7b>

Session 2

Overview of road transportation in developing countries

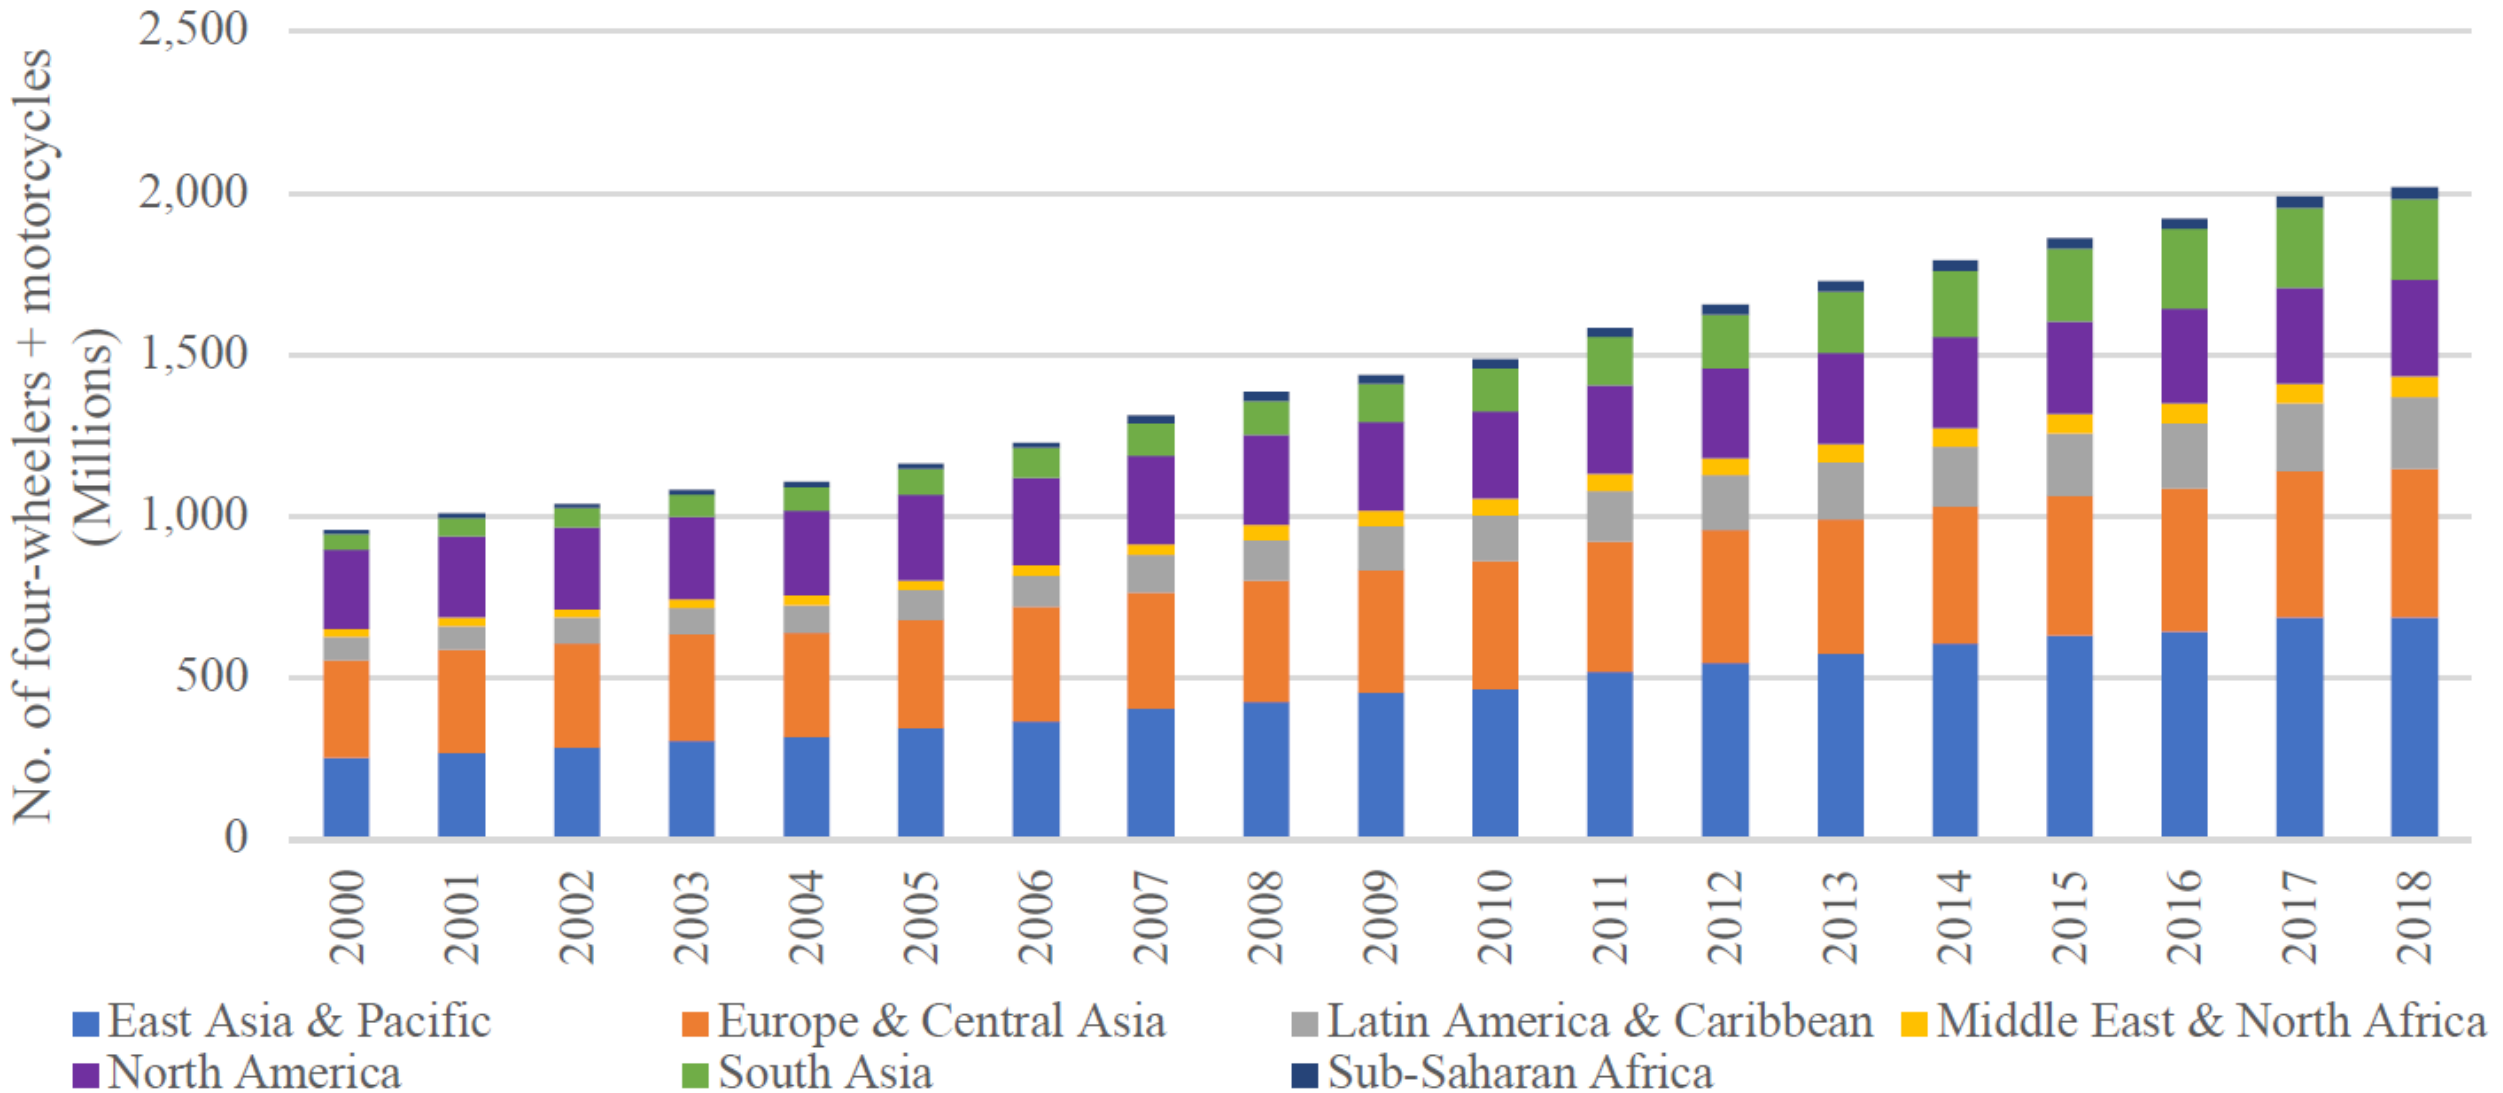

By the end of this session, you will know more about :

1. Different contexts of road transportation data in developing countries
2. Constraints and difficulties for data collection from road transportation
3. Data needs to improve GHG emission estimates from road transportation

Learning objectives

Trend of vehicles in use by region between 2000 - 2018

History of data development for road vehicles

- Vehicle manufacturer (safety and environmental regulations, compliance)
- Legal framework development
- Civil society (Pressure groups) and governance
- Traffic management and road infrastructure investment
- Air quality control and health protection
- Environmental protection awareness

Different contexts of road transportation data

- Activity Data (Fuels, Vehicle stock)
 - Unit Emission Factors (Fuel, Vehicle)
 - Vehicle fleet characterization
 - Driving conditions and parameters
-
- * **Developed countries:** vehicle manufacturer, regulations (implementation of emission standards), fleet and traffic observatories, professional associations, scientific research, etc.
 - * **Developing countries:** importer (new, used), vehicle assembler, absence of standards, absence of observatories, weak scientific research, etc.

Lack of data in developing countries

1/2

Vehicle fleet composition, annual mileage and traffic characteristics

- **Weak Vehicle Registration Systems:** fragmented, decentralized with gaps or inaccuracies in recorded data
- **Limited Institutional Capacity:** lack of resources, expertise, and technology to maintain accurate and comprehensive records (updating)
- **Lack of Data Collection Infrastructure and management:** requires investment which is not prioritized over issues such as poverty reduction, health, and education
- **Limited Financial and human Resources for Surveys and Studies:** collecting accurate vehicle mileage and other road vehicle driving parameters data require extensive surveys.

Vehicle fleet composition, annual mileage and traffic characteristics

- **Infrequent Vehicle Inspections:** I/M is poorly enforced, or absent, data collected is not always centralized or properly utilized.
- **Adoption of Emission Standards with Inconsistent Implementation:** Several countries adopted pollutant emission standards (Euro, US standards or equivalents) but not fully implemented, Fuel quality regulations to reduce the sulfur content for enabling vehicles to meet emission standards but partially implemented and fuel composition data not collected.
- **Challenges with Imported Used Vehicles:** incomplete or inadequate data recorded

Challenges for data collection

1/2

- 1. Vehicle Fleet Data:** Lack, limited or outdated records of vehicle fleets (Data on vehicle types, fuel types, age, technology, emission standards and usage patterns are often incomplete or unavailable).
- 2. Fuel Consumption Data and characteristics:** Lack of accurate data on fuel sales, fuel usage and fuel quality (fuel composition).
- 3. Traffic and Road Use Patterns data:** Lack or poor data on vehicle road traffic (speed and mileage per vehicle category and road type).

4. **Emission Factors:** Lack of country specific emission factors, use of default EFs which may not be appropriate for the vehicle technologies and national driving conditions.
5. **Vehicle Types:** Lack of data on aging and maintenance per vehicle category.
6. **Low technical Expertise:** Lack trained personnel and institutions to develop comprehensive GHG inventories.

Session 3

2006 IPCC GLs for estimating GHG emissions from road transportation

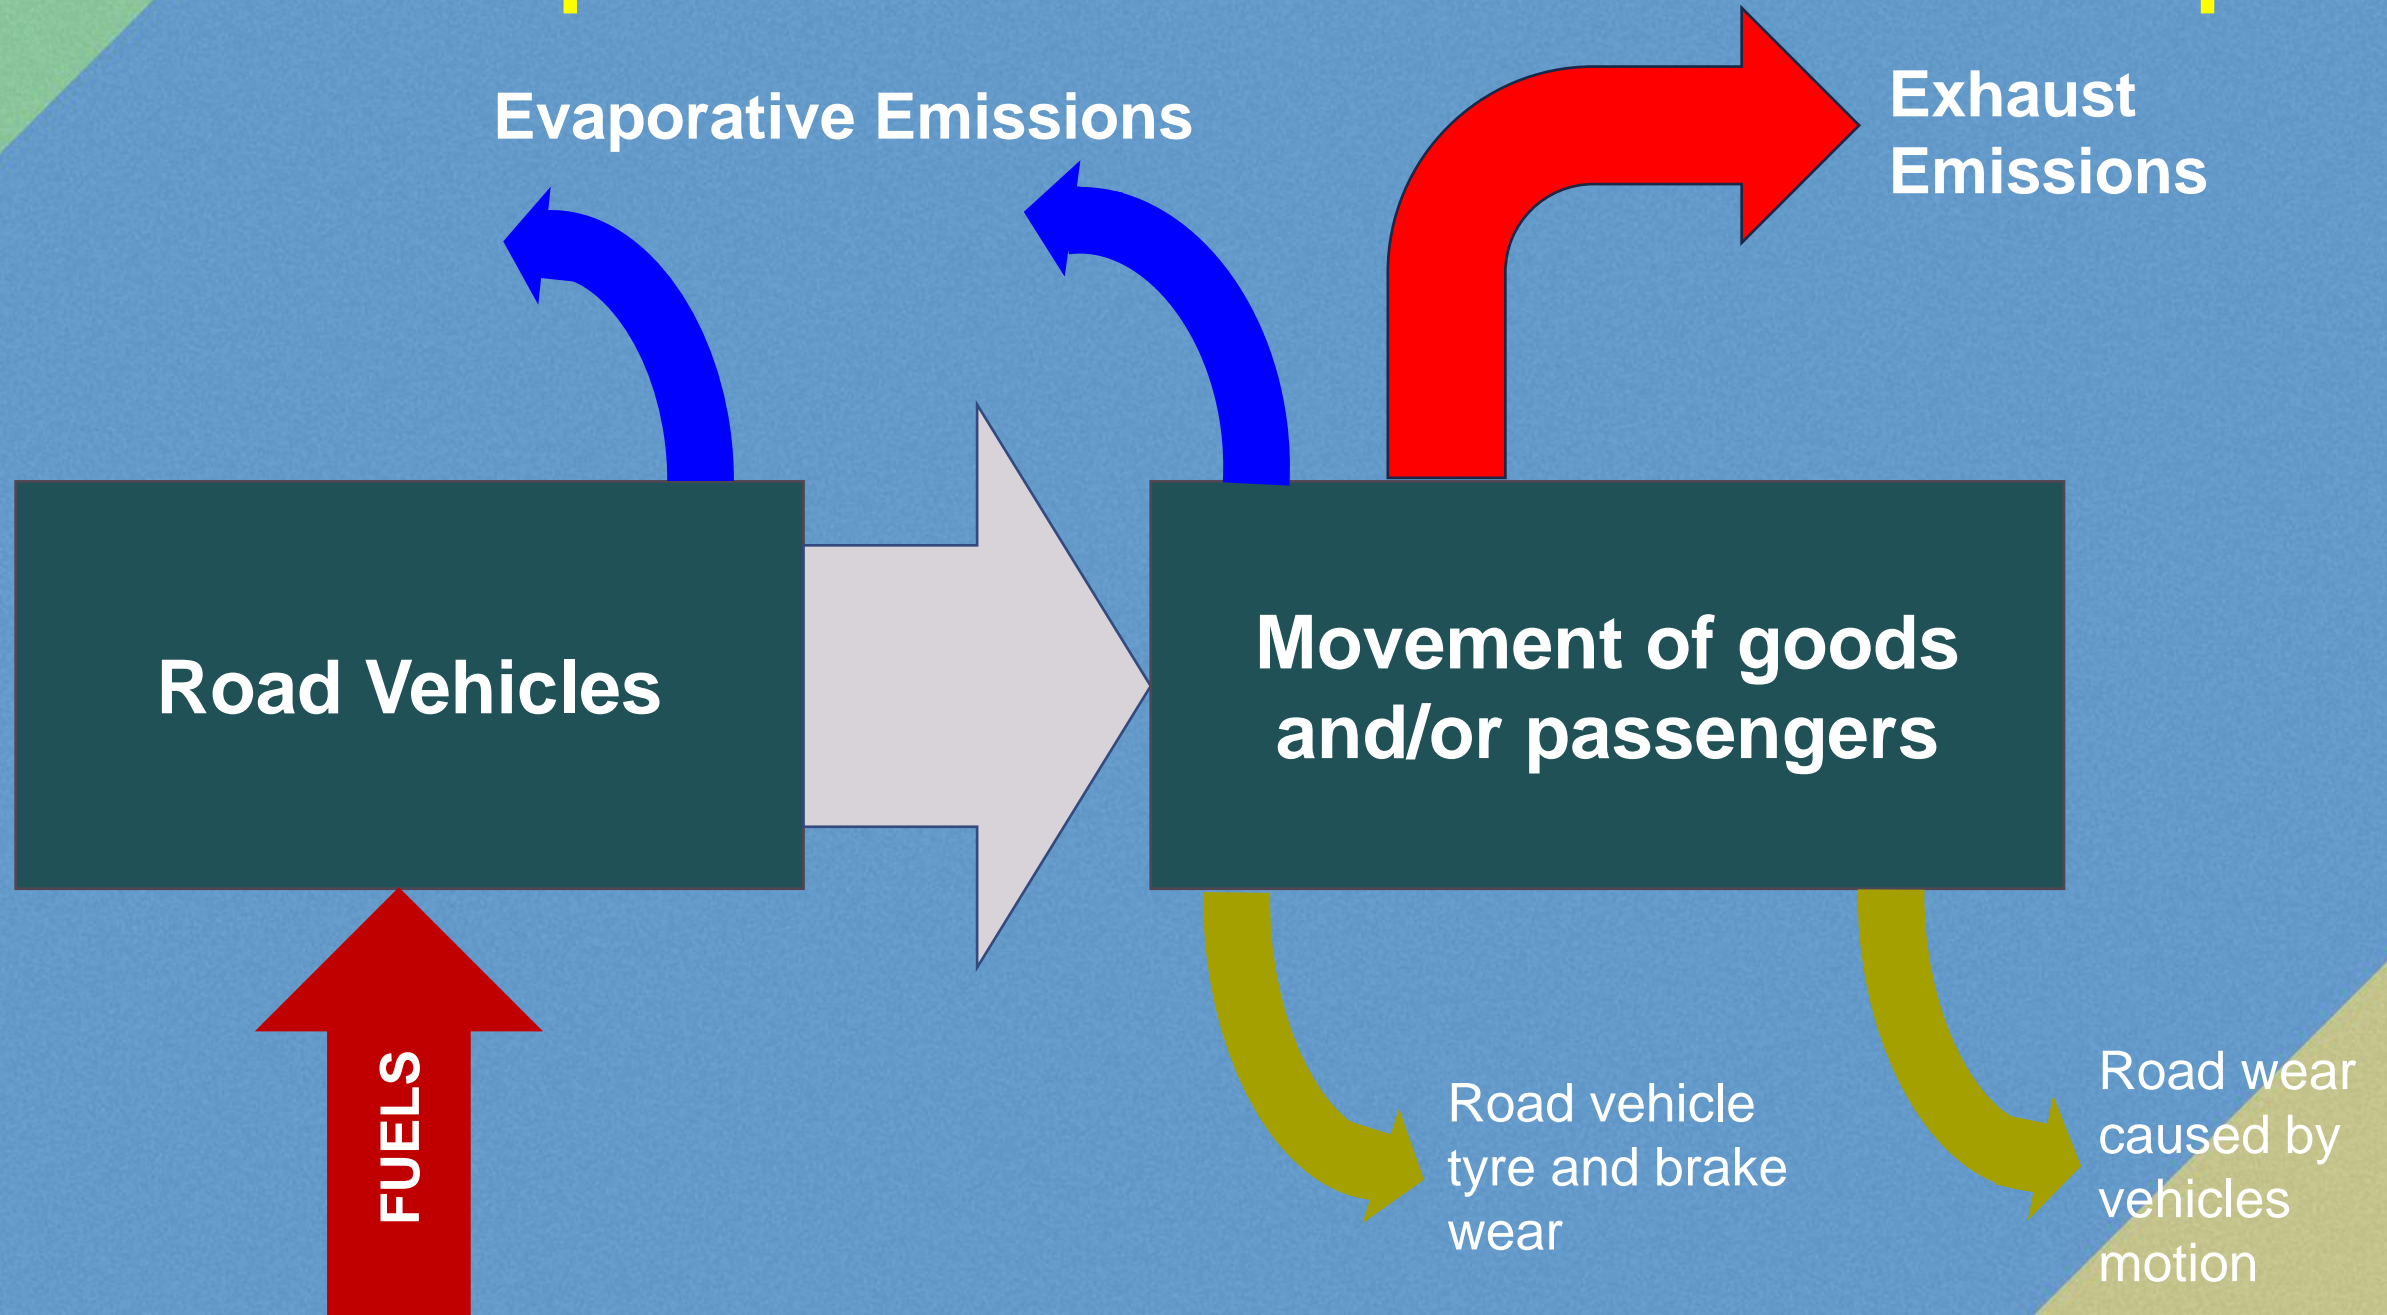

By the end of this session, you will :

1. Know all about the IPCC methodologies to estimate GHG emissions from road transportation
2. Understand the different tiers (T1, T2, T3)
3. Identify the needed data to move to higher tier to estimate GHG emissions

Learning objectives

Sources of pollutant emissions from road transport

Sources of pollutant emissions from road transport

• **Evaporative Emissions**

IPCC Category: 1 A 3 b v

• **Refueling Losses**

IPCC Category: 1 B 2 a 5

• **Exhaust Emissions**

> 90%

IPCC Category: 1 A 3 b i-iv

IPCC 2006 Classification: Fuel combustion

Top-down approach

Bottom-up approach

IPCC 2006 (Refinement 2019) : Classification of fugitive emissions of fuels

Fundamental Concept of GHG Emission Estimation

$$\text{Emission} = \text{Activity Data (AD)} \times \text{Emission Factor (EF)}$$

Activity Data required

1- Statistics on Fuel consumption:

- Fuel type, composition
- Vehicle category
- Vehicle technology

2- Statistics on traffic characteristics

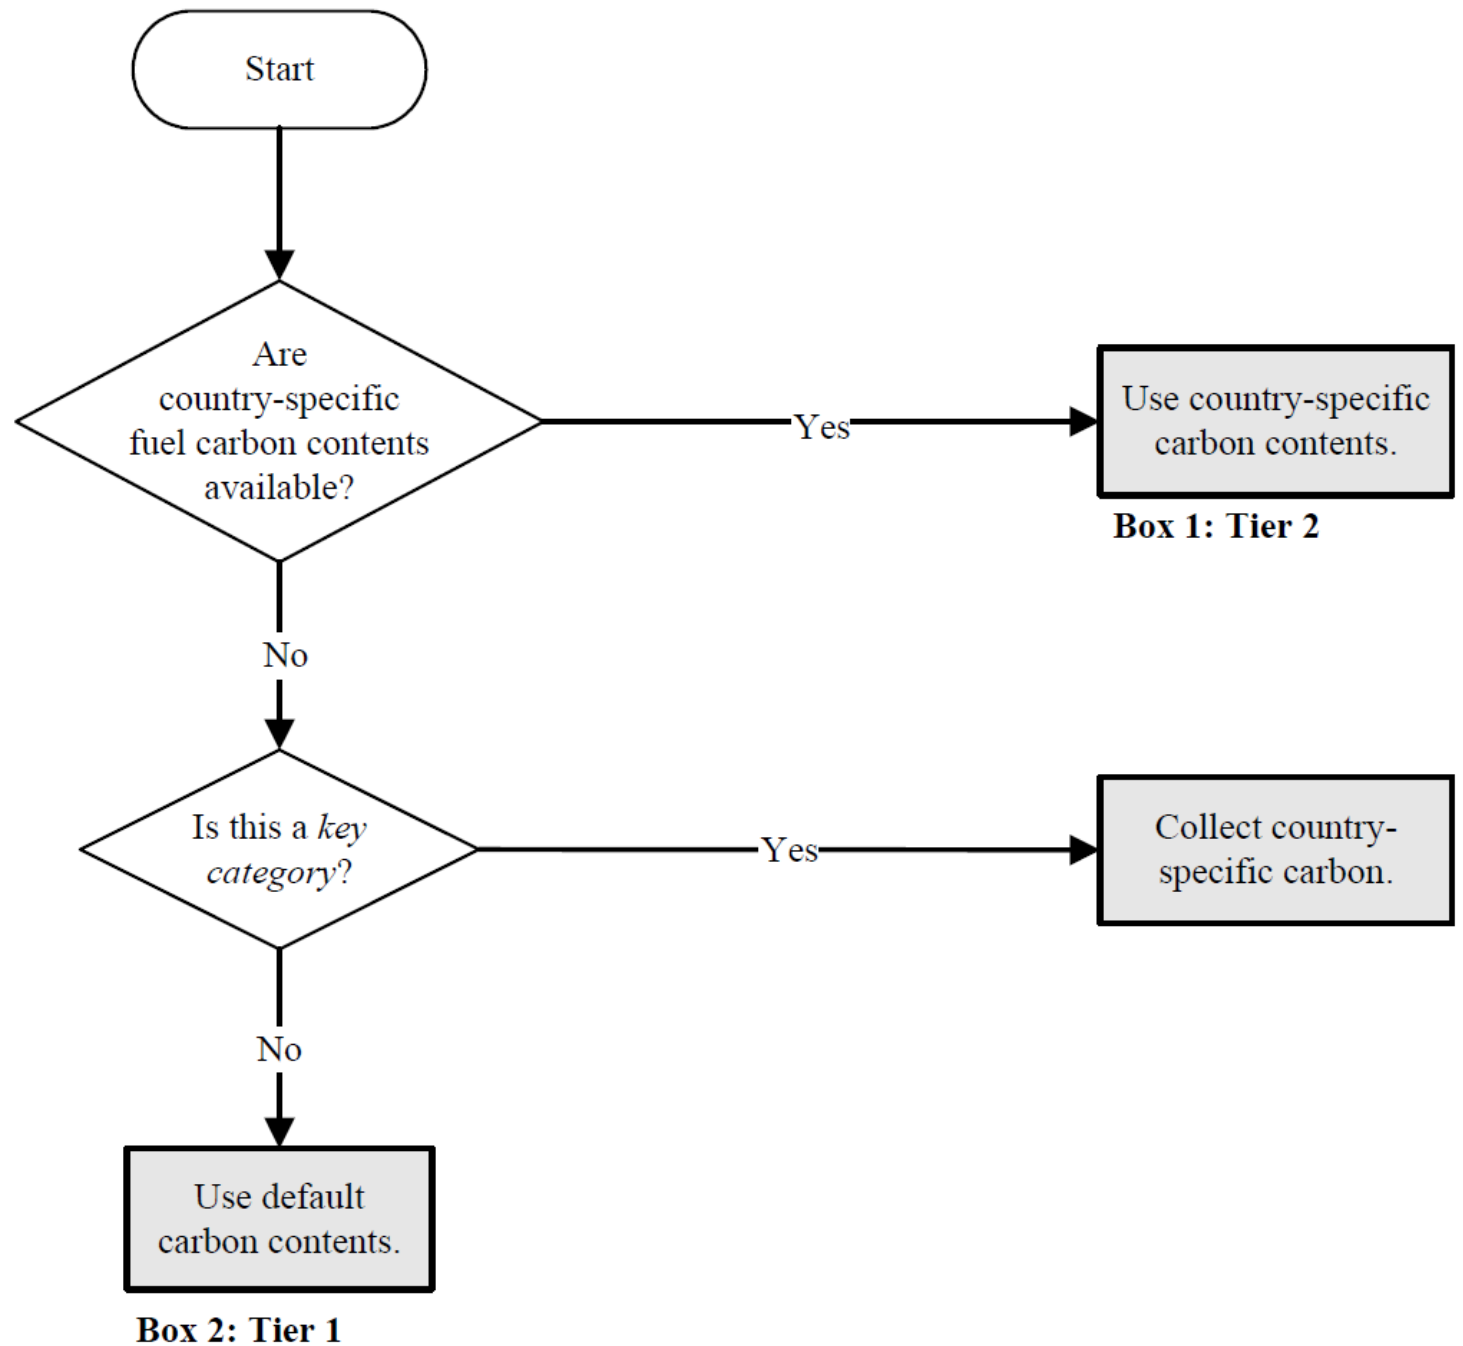

- Total annual mileage
- Average Speed
- Road type

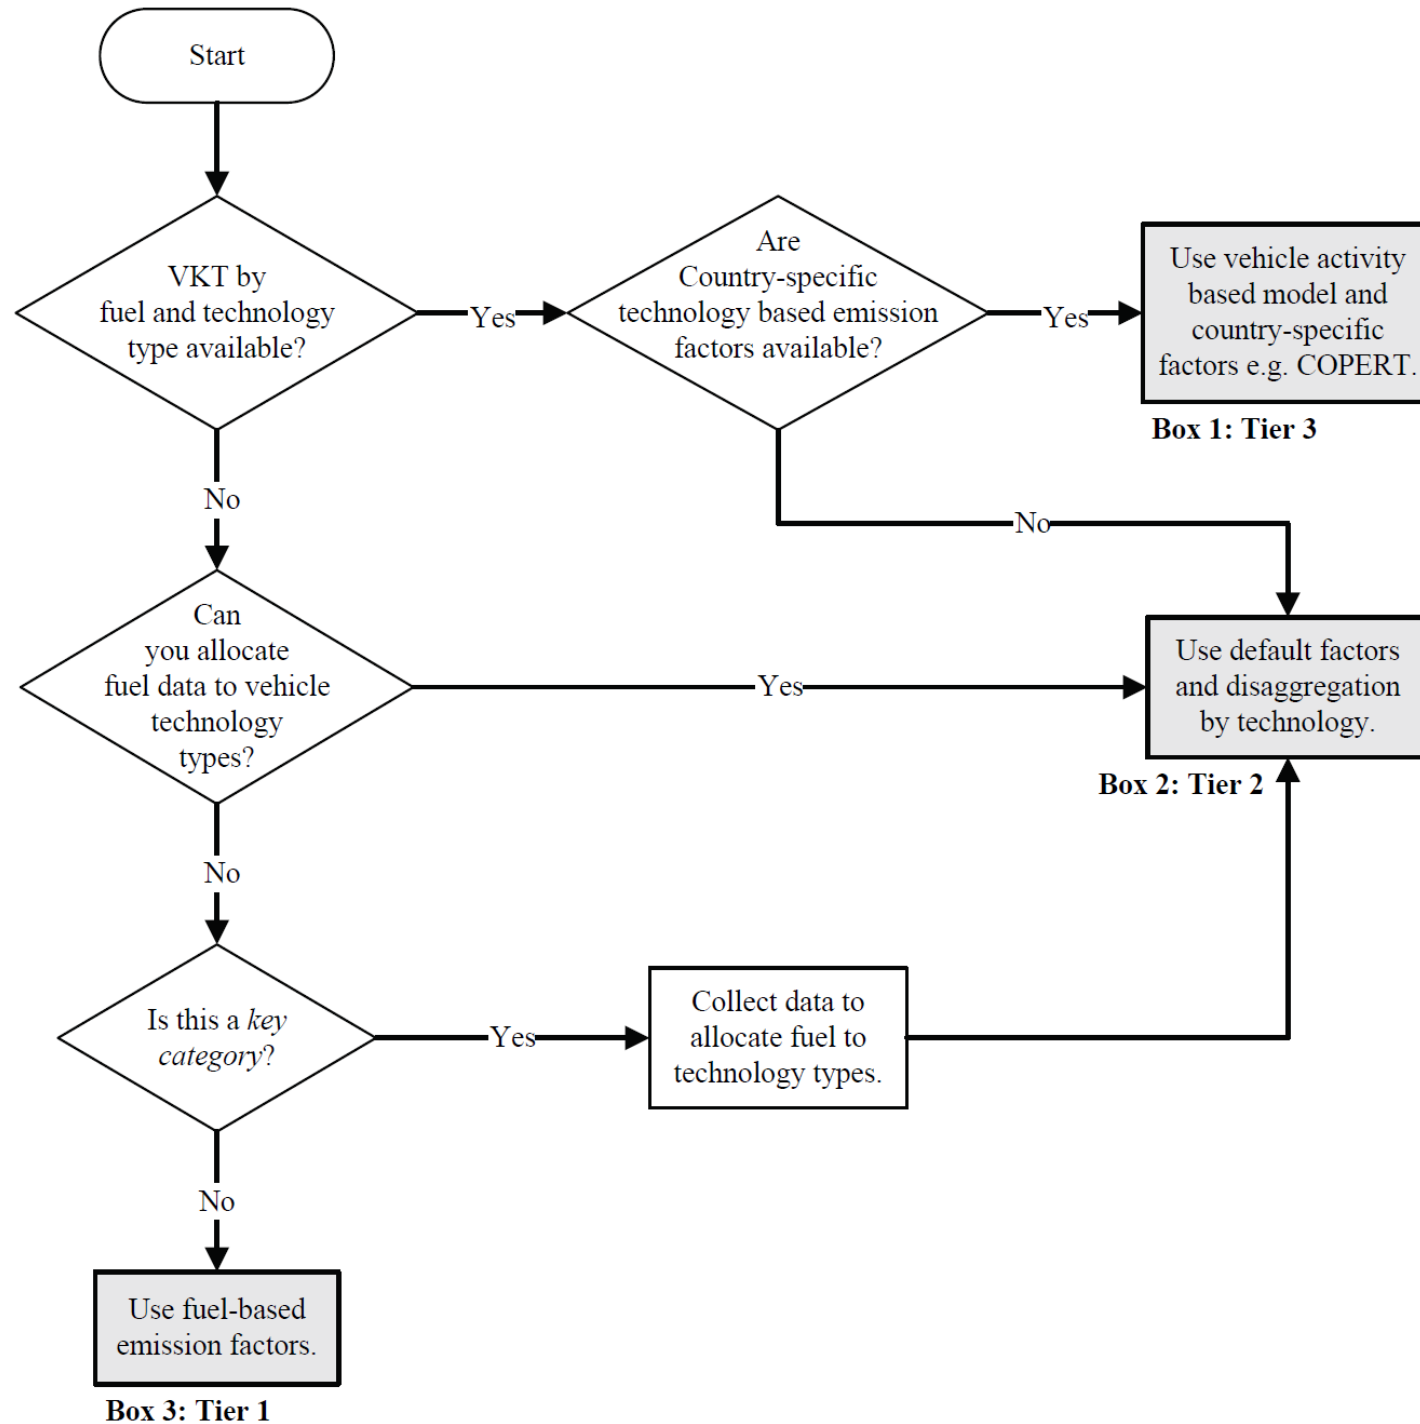

3- Statistics on vehicle stock

- Vehicle category (fuel type)
- Vehicle technology

Decision tree for CO₂ emissions from fuel combustion in road vehicles

IPCC 2006, Vol. 2, Chap. 3, Fig. 3.2.2

IPCC 2006 decision tree for estimating CO₂, CH₄ and N₂O emissions from road vehicles

IPCC 2006, Vol. 2, Chap. 3, Fig. 3.2.3

Tier 1: CO₂ emission

EQUATION 3.2.1 CO₂ FROM ROAD TRANSPORT

$$Emission = \sum_a [Fuel_a \cdot EF_a]$$

IPCC 2006, Vol. 2, Chap. 3, Eq. 3.2.1

Where:

Emission = Emissions of CO₂ (kg)

Fuel_a = Fuel sold (TJ)

EF_a = **Default EF** (kg/TJ). This is equal to the **carbon content** of the fuel multiplied by 44/12

a = type of fuel (e.g. petrol, diesel, natural gas, LPG, etc.)

Tier 2: CO₂ emission

EQUATION 3.2.1

CO₂ FROM ROAD TRANSPORT

$$Emission = \sum_a [Fuel_a \cdot EF_a]$$

IPCC 2006, Vol. 2, Chap. 3, Eq. 3.2.1

Where:

Emission = Emissions of CO₂ (kg)

Fuel_a = fuel sold (TJ)

EF_a = **Country specific EF** (kg/TJ). This is equal to the **CS carbon content** of the fuel multiplied by 44/12.

a = type of fuel (e.g. petrol, diesel, natural gas, LPG etc)

Tier 1: Emission of CH₄ and N₂O

EQUATION 3.2.3

TIER 1 EMISSIONS OF CH₄ AND N₂O

$$Emission = \sum_a [Fuel_a \cdot EF_a]$$

IPCC 2006, Vol. 2, Chap. 3, Eq. 3.2.3

Where:

Emissions = Emission in kg

EF_a = Default emission factor (kg/TJ)

$Fuel_a$ = Fuel consumed (TJ) (represented by fuel sold)

a = Fuel type a (e.g., diesel, gasoline, natural gas, LPG)

Tier 2: Emission of CH₄ and N₂O

EQUATION 3.2.4

TIER 2 EMISSIONS OF CH₄ AND N₂O

$$Emission = \sum_{a,b,c} [Fuel_{a,b,c} \cdot EF_{a,b,c}]$$

IPCC 2006, Vol. 2, Chap. 3, Eq. 3.2.4

Where:

Emission = emission in kg

$EF_{a,b,c}$ = emission factor (kg/TJ) (Tier 2, USA)

$Fuel_{a,b,c}$ = fuel consumed (TJ) (represented by fuel sold) for a given mobile source activity

a = fuel type (e.g., diesel, gasoline, natural gas, LPG)

b = vehicle type

c = emission control technology (such as uncontrolled, catalytic converter, etc)

Tier 3: Emission of CH₄ and N₂O

EQUATION 3.2.5

TIER 3 EMISSIONS OF CH₄ AND N₂O

$$Emission = \sum_{a,b,c,d} [Distance_{a,b,c,d} \cdot EF_{a,b,c,d}] + \sum_{a,b,c,d} C_{a,b,c,d}$$

IPCC 2006, Vol. 2, Chap. 3, Eq. 3.2.5

Where:

Emission = emission of CH₄ or N₂O (kg)

EF_{a,b,c,d} = emission factor (kg/km) (Tier 3, COPERT model)

Distance_{a,b,c,d} = distance travelled (VKT) during thermally stabilized engine (km)

C_{a,b,c,d} = emissions during warm-up phase (cold start) (kg)

a = fuel type (e.g., diesel, gasoline, natural gas, LPG)

b = vehicle type

c = emission control technology (such as uncontrolled, catalytic converter, etc.)

d = operating conditions (e.g., urban or rural road type, climate, or other environmental factors)

Conclusions from 2006 IPCC GLs

CO₂

Tier 1:

- Fuel consumption (sold)
- Default EF

✓

Tier 2:

- Fuel consumption (sold)
- Country Specific EF

✓!

CH₄ & N₂O

Tier 1:

- Fuel consumption (Sold)
- Default EF

✓

Tier 2:

- Fuel consumption (Sold)
- EF by technology

!

Tier 3:

- Distance travelled
- EF disaggregated (COPERT)
- Cold emissions

!

Day 2

Tuesday 24 September 2024

15:00 – 17:00 (Bonn Time)

Session 4

Higher tier methods for estimating GHG emissions from road transportation

COPERT model: interface and functions

By the end of this session, you will:

1. Know more on Copert model features, requirements and installation
2. Discover the Copert Interface,
3. Identify the different functionalities
4. Understand the different modules & menus
5. Know more on the data needed to run it

Learning objectives

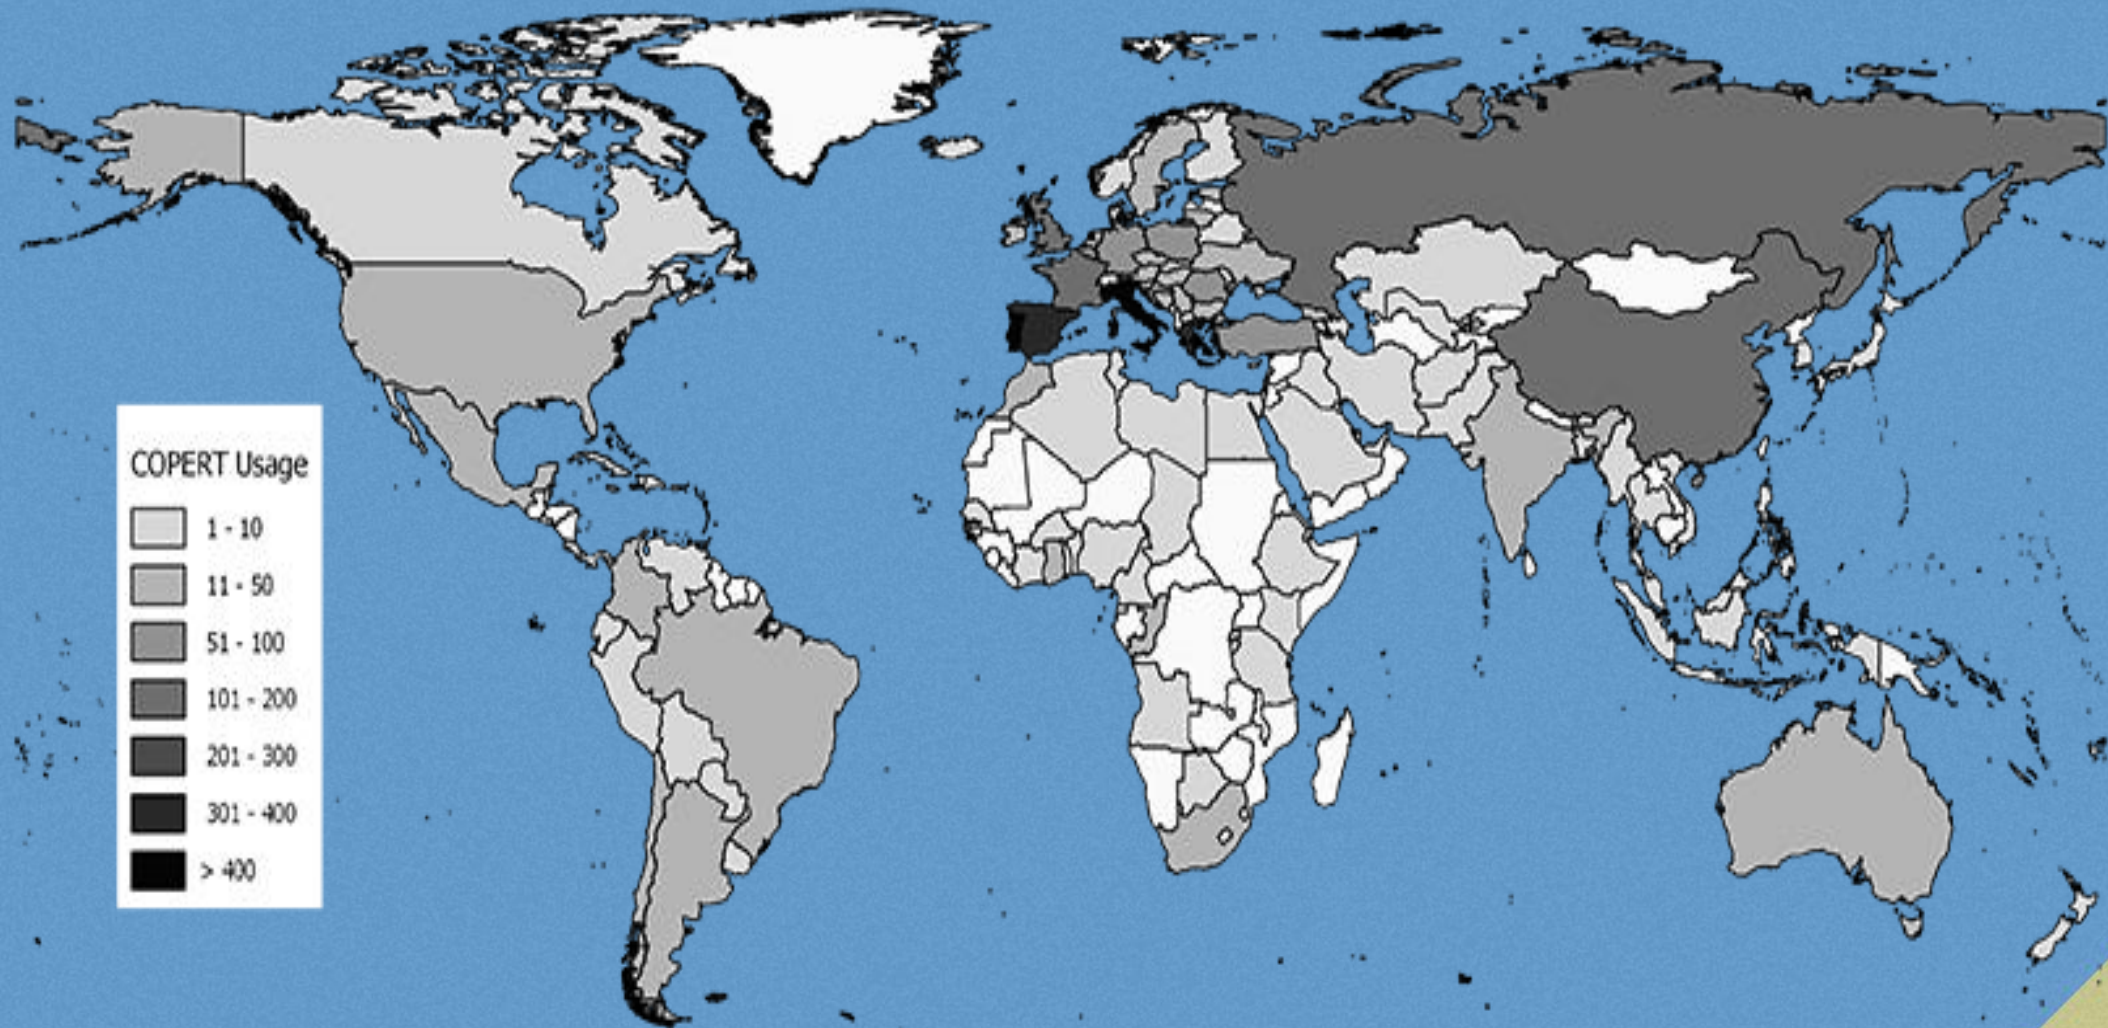

COPERT: Description

- COPERT: **CO**mputer **P**rogram to calculate **E**missions from **R**oad **T**ransport
- COPERT version **5.7.3** (latest version)
- European tool for the calculation of emissions from the road transport sector (EEA & JRC funded)
- Scientifically and technically supported by Emisia and the Laboratory of Applied Thermodynamics, University of Thessaloniki, Greece
- **COPERT methodology is consistent with the 2006 guidelines for the calculation of GHG Emissions**

COPERT: Uses & application

- It uses vehicle stock, mileage, speed and other data such as ambient temperature and calculates emissions and energy consumption for a specific country or region.
- Covers all classes of road vehicles
- Calculates emissions of all pollutants from road transport
 - regulated pollutants: CO, NO_x, VOC, PM) and CO₂,
 - unregulated pollutants (N₂O, NH₃, SO₂, NMVOC, etc.)
- Calculates fuel consumption
- Applicable in all countries of the world

COPERT usage in the world (2021)

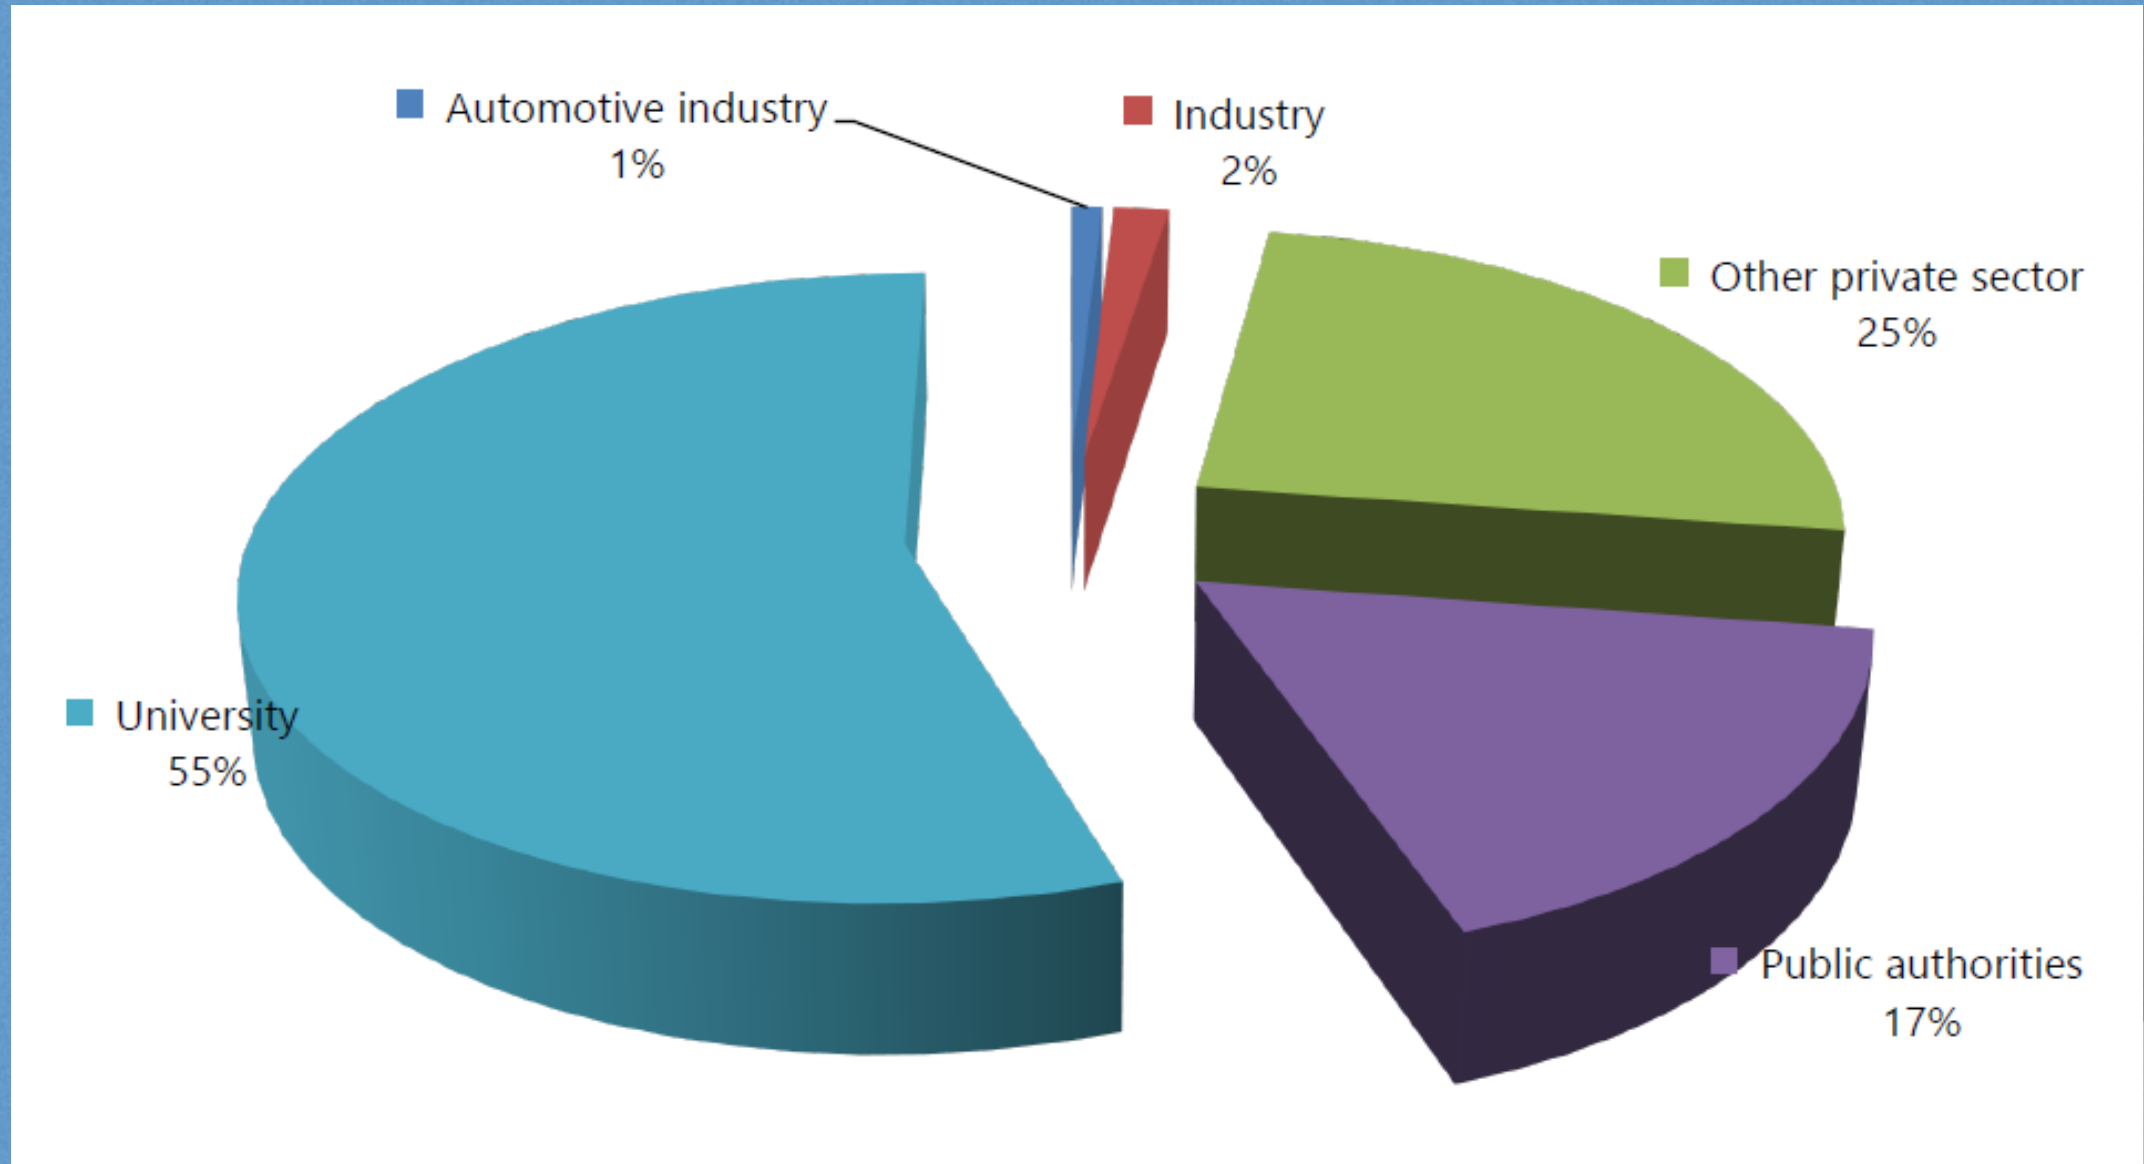

Copert Users: Continent Distribution (2021)

Based on ~800 unique downloads/year

COPERT Users (2021): Distribution by activity

COPERT Applications (2021)

COPERT installation Requirements

COPERT is a 32-bit application and requires a 32-bit/64-bit Microsoft Windows operating system.

Minimum software requirements:

1. Microsoft® Windows XP SP3 or newer Windows version
2. Microsoft .NET Framework v4.0 Client Profile or later

Minimum hardware requirements

1. 1 GHz, 32-bit(x86) processor
2. 1 GB RAM
3. 30 MB for installation, 100 MB for full run
4. Screen Resolution: 1024x768 pixels

Note that a higher frequency processor based computer and/or more on RAM memory are recommended if frequent use of the program is expected.

COPERT 5.7.3 interface

Detailed Menu of Tier 2

The screenshot displays the COPERT 5.7.3 software interface for Algeria. The main window has a menu bar with the following items: File, Year, Properties, Fuel, Vehicles, Results, Exchange, Timeseries Results, and About. The 'File' menu is open, showing options: Add Entity (Ctrl+E), Copy Entity (Ctrl+P), Remove Entity (Ctrl+U), Add Year (Ctrl+Y), Copy Year (Ctrl+T), Remove Year (Ctrl+R), Select (Ctrl+D), and Close. The 'Fuel' menu is also open, showing: Environmental Information, Statistical Consumption, Share of ETBE in Bioethanol, Share of FAME in Biodiesel, Stock Configuration (Ctrl+F, Ctrl+V), Stock & Activity Data, and SCR Usage. The 'Results' menu is open, showing: Total Emissions, Implied Emission Factors, and NMVOC Speciation. The 'Exchange' menu is open, showing: Export Input Structure (Excel File), Export Factors (Excel File), Export Results (Excel File), Export Energy & GHG breakdown (Excel File), Import Input Data (Excel File), Export CRF (Excel File), and Export NFR (Excel File). The 'Timeseries Results' menu is open, showing: Total Emissions and Implied Emission Factors. On the right side, there is a 'Status' panel with the following information: File (Country: Algeria, Run Mode: Timeseries, Created: 22 Apr 2024, 15:21, Saved: 22 Apr 2024, 15:23), Year: 2023, Fuel Balance: NO, Improved Fuel Quality Year: 1996, Mileage Degradation: No Effect, Lube-Oil CO2 Effect: NO, A/C Effect: NO, SCR CO2 Effect: NO, Fuel Balance Calculated: Perform Energy Balance, Emissions Calculated: NO, Calculate Emissions, All Years: Calculate All Years, Configuration: Perform automatic energy balance (checked), Add CO2 Emissions Due to Lube-Oil (unchecked), Enable A/C Calculations (unchecked), Apply SCR CO2 Emissions (unchecked), Exclude Evaporative Emissions (unchecked), Apply for all years (unchecked).

COPERT 5.7.3 Interface

Detailed menu of Tier 3

The screenshot displays the COPERT 5.7.3 software interface, showing a detailed menu of Tier 3. The interface is organized into several sections, each with a list of options and sub-options. The main menu items are: Properties, Fuel, Vehicles, Factors, Results, Parameters, Exchange, Timeseries Results, and About. The 'Fuel' section includes: Environmental Information, Trip Characteristics, Specifications, Advanced Specifications, Lubricants Specifications, Statistical Consumption, Reid Vapor Pressure, Share of ETBE in Bioethanol, and Share of FAME in Biodiesel. The 'Vehicles' section includes: Stock Configuration (Ctrl+F, Ctrl+V), Stock & Activity Data, Circulation Data, Fuel Evaporation Data, Driving Conditions, Axles Number, SCR Usage, A/C Usage, Technology Share, Blend Share, and Bifuel Share. The 'Factors' section includes: Hot, Cold, Cold for SPN23 and PM Exhaust, Evaporation, Beta, A/C, Mileage Degradation, Lubricant, and Fuel Effect. The 'Results' section includes: Total Emissions, Implied Emission Factors, NMVOC Speciation, and Energy & GHG breakdown. The 'Parameters' section includes: Hot, Cold, Cold for SPN23 and PM Exhaust, A/C, Mileage Degradation, Lubricant Consumption, NMVOC, CH4 Cold, Parameters for NH3 & N2O, Share of NO2 over NOx, Share of EC & OM over PM, Beta Correction Factor, Vehicle performance improvement, and Mapping HDVs to/from VECTO Groups. The 'Exchange' section includes: Export Input Structure (Excel File), Export Factors (Excel File), Export Results (Excel File), Export Energy & GHG breakdown (Excel File), Import Input Data (Excel File), Export CRF (Excel File), and Export NFR (Excel File). The 'Timeseries Results' section includes: Total Emissions and Implied Emission Factors. A status panel on the right shows: Country: Algeria, Run Mode: Timeseries, Created: 22 Apr 2024, 15:21, Saved: 22 Apr 2024, 15:23, Year: 2023, Fuel Balance: NO, Improved Fuel Quality Year: 1996, Mileage Degradation: No Effect, Lube-Oil CO2 Effect: NO, A/C Effect: NO, SCR CO2 Effect: NO, Fuel Balance Calculated: Perform Energy Balance, Emissions Calculated: NO, Calculate Emissions, All Years, Calculate All Years, Configuration, Perform automatic energy balance, Add CO2 Emissions Due to Lube-Oil, Enable A/C Calculations, Apply SCR CO2 Emissions, Exclude Evaporative Emissions, Apply for all years.

Wizard execution

After creating or opening an inventory file, one can use a wizard, which performs the basic steps in order to produce and calculate a complete run.

The image illustrates the wizard execution process in COPERT. It shows three windows:

- File Menu:** A screenshot of the 'File' menu with 'Create with Wizard' circled in red.
- New Run Wizard (Step 1):** A dialog box titled 'New Run Wizard' with 12 numbered steps. Step 1, 'Add Year', is highlighted with a black circle. The 'Next' button is active.
- New Run Wizard (Step 7):** A dialog box titled 'New Run Wizard' with 12 numbered steps. Step 7, 'Stock Configuration', is highlighted with a black circle. The 'Next' button is active.

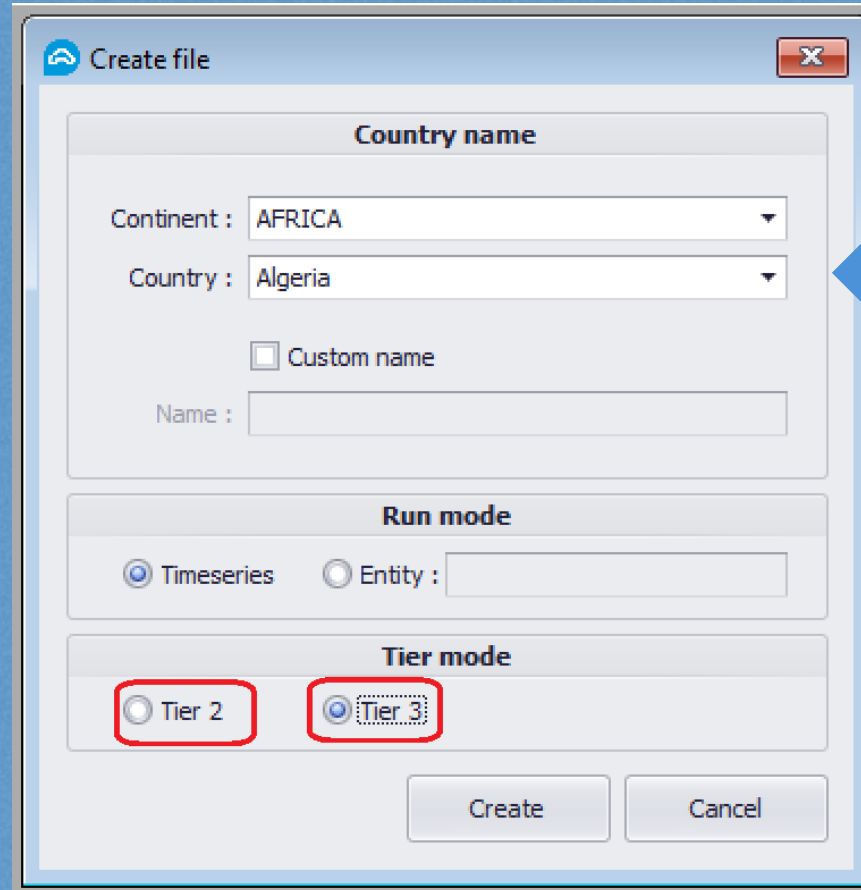

A large red arrow points from the 'Create with Wizard' menu item to the first 'New Run Wizard' dialog box.

Just press 'Next' and follow the instructions

File > Create

Country > add country

The methodology for the calculation of exhaust emissions may follow Tier 2 or Tier 3. In Tier 2 methodology, the calculations take into account the amount of fleet and the vehicle kilometers per technology while in Tier 3, emission factors are more detailed and they depend also on temperature profile, driving pattern, parking pattern, and other activity parameters.

The screenshot shows a 'Create file' dialog box with the following fields and options:

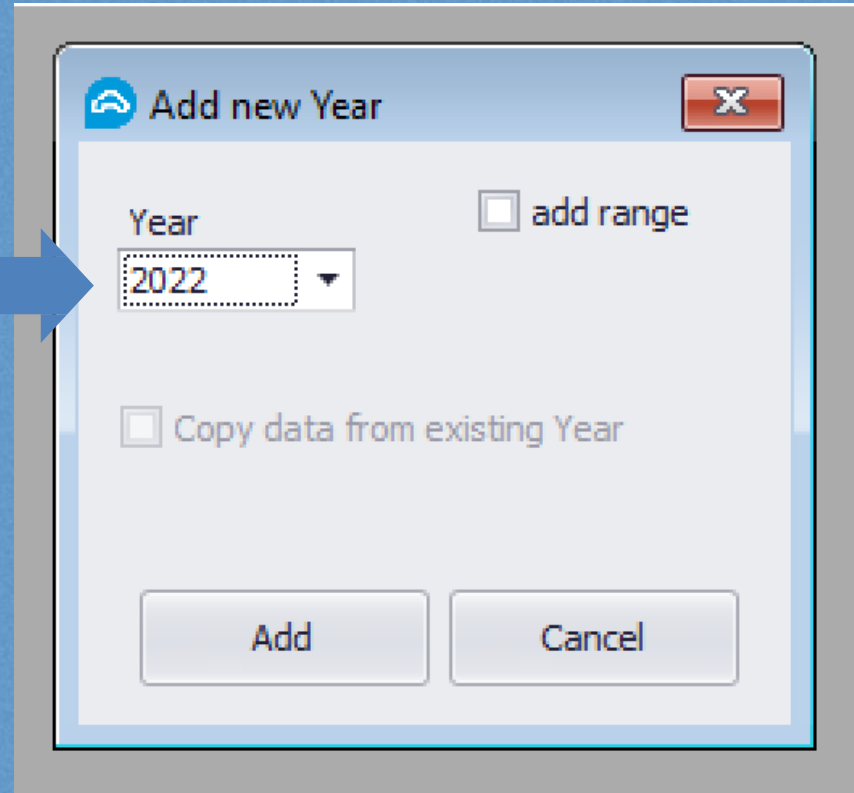

- Country name:**
 - Continent: AFRICA
 - Country: Algeria
 - Custom name
 - Name: [empty text box]
- Run mode:**
 - Timeseries
 - Entity: [empty text box]
- Tier mode:**
 - Tier 2

Properties > Environmental Information

The screenshot shows a dialog box titled "Environmental Information" with a table of monthly climate data. The table has four columns: "Month", "Min Temperature [°C]", "Max Temperature [°C]", and "Humidity [%]". The data is as follows:

Month	Min Temperature [°C]	Max Temperature [°C]	Humidity [%]
January	15	31	43%
February	18	35	43%
March	22	38	38%
April	26	42	35%
May	27	41	33%
June	26	39	55%
July	25	36	61%
August	24	34	72%
September	24	36	77%
October	23	38	40%
November	19	36	31%
December	16	33	35%

At the top of the dialog, there are buttons for "Undo", "Redo", "Import", and "Export". The "Import" and "Export" buttons are highlighted with a red box. At the bottom, there are "OK", "Apply", and "Cancel" buttons.

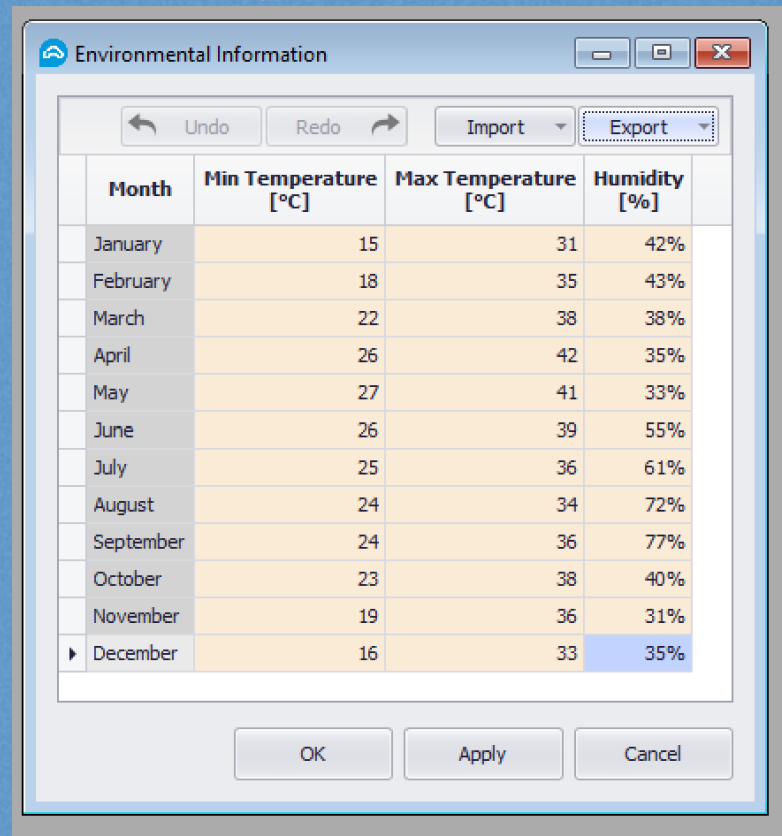

Import to and from Excel
(functionality exists in all
forms)

Not required for a
basic run

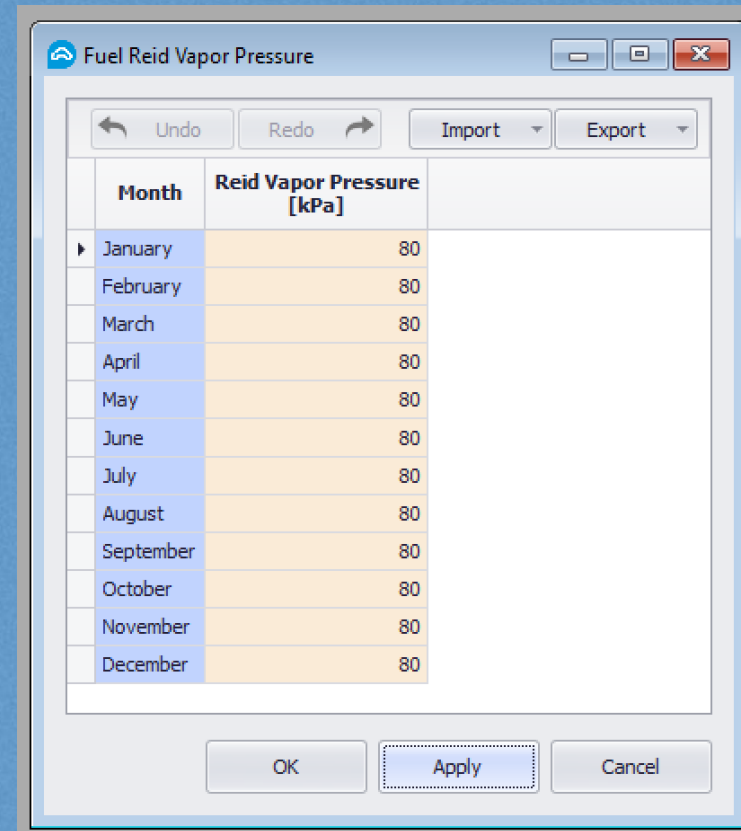

Properties > min et max temperatures et RVP

The user may provide values for monthly average minimum and maximum temperatures. These values may be different for every year.

The user may provide the relative humidity per month. This is required to calculate the load of air-conditioning (A/C) and the fuel evaporation. A high value denotes high humidity and a higher load for the A/C that increases consumption.

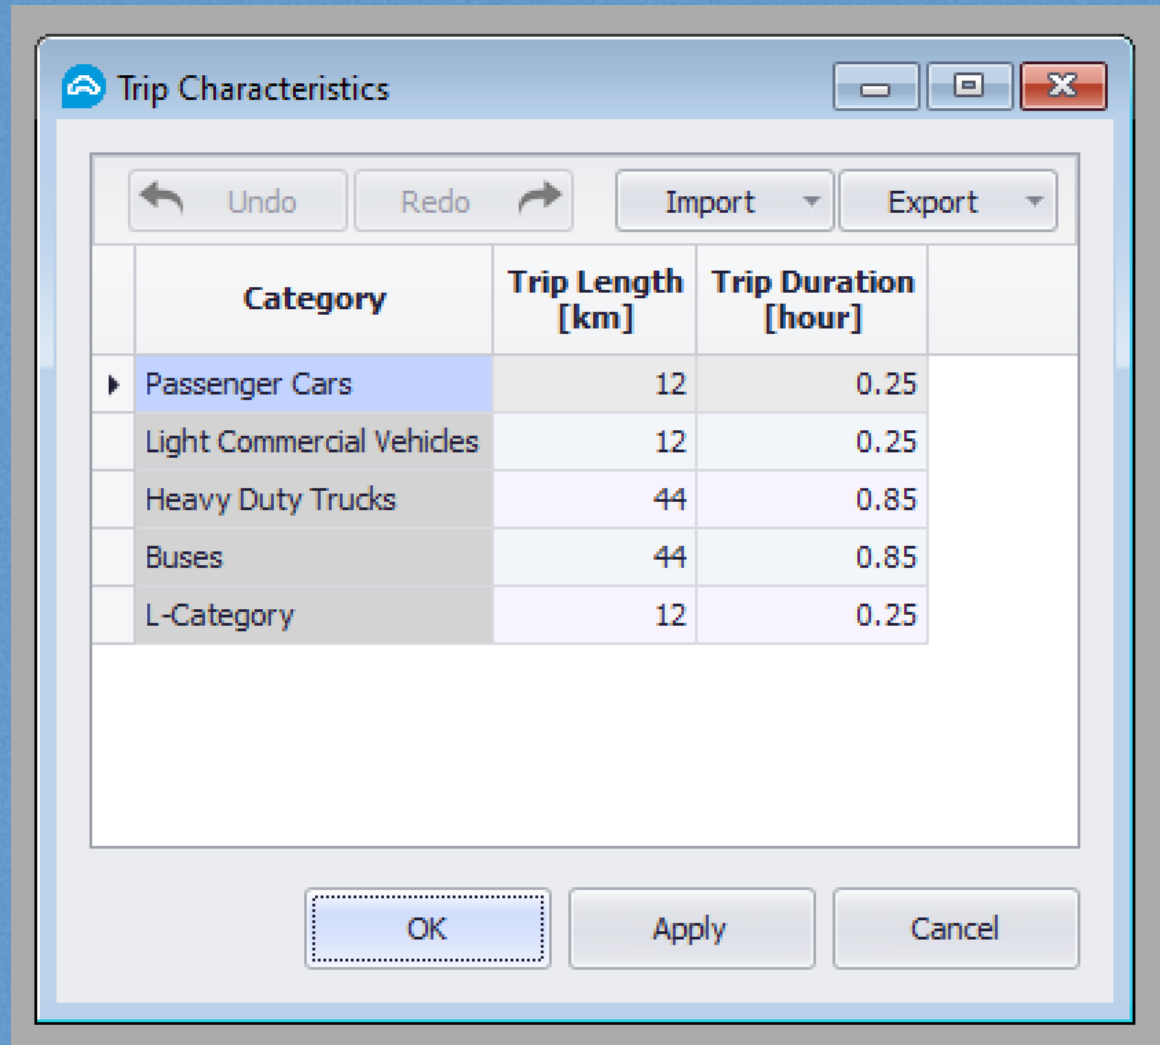

Month	Min Temperature [°C]	Max Temperature [°C]	Humidity [%]
January	15	31	42%
February	18	35	43%
March	22	38	38%
April	26	42	35%
May	27	41	33%
June	26	39	55%
July	25	36	61%
August	24	34	72%
September	24	36	77%
October	23	38	40%
November	19	36	31%
December	16	33	35%

Month	Reid Vapor Pressure [kPa]
January	80
February	80
March	80
April	80
May	80
June	80
July	80
August	80
September	80
October	80
November	80
December	80

Properties > Trip Characteristics

The user may change the country's average Trip Length in km and Trip Duration in hours for each vehicle category or keep the default values.

Fuel > Specifications

The user may provide data for the Fuel specifications (energy content and fuel density) or keep the default values and Values for several heavy metal content and O:C ratio are also proposed. Those values may change if more accurate figures are available. These data can be different every year.

Primary Fuel	Specifications				Content In Species									
	Energy Content [MJ/kg]	H:C Ratio [-]	O:C Ratio [-]	Density [kg/m3]	S [ppm wt]	Pb [ppm wt]	Cd [ppm wt]	Cu [ppm wt]	Cr [ppm wt]	Ni [ppm wt]	Se [ppm wt]	Zn [ppm wt]	Hg [ppm wt]	pp
Petrol Grade 1	43.774	1.86	0	750	0	0.0016	0.0002	0.0045	0.0063	0.0023	0.0002	0.033	0.0087

COPERT default values

Fuel > Advanced Specifications

The user may provide data the Advanced Fuel Quality Specifications and choose between four fuel types: 1996 (Base Fuel), 2000 (Stage 2000) and 2005 (Stage 2005), 2009 (Stage 2009) from the Fuel Year drop-down list.

The default value is 1996. If this option is selected then all vehicles are assumed to operate on a conventional – Base – fuel (corresponding to 1996 EU15 market average).

Year	Petrol				Diesel		
	E100 [% vol]	E150 [% vol]	Aromatics [% vol]	Olefins [% vol]	PCS [% vol]	CN	T95 [oC]
1996	52%	86%	39%	10%	9%	51	30
2000	52%	86%	37%	10%	7%	53	30
2005	52%	86%	33%	10%	5%	53	320
2009	52%	86%	33%	10%	5%	53	320

Fuel Year : 1996

OK Apply Cancel

COPERT default values

Fuel > Statistical energy consumption

The user may provide the statistical energy consumption in case he/she wants COPERT to perform an energy balance. Providing values is not enough for taking into account statistical energy consumption, the user also has to select to "perform automatic energy balance".

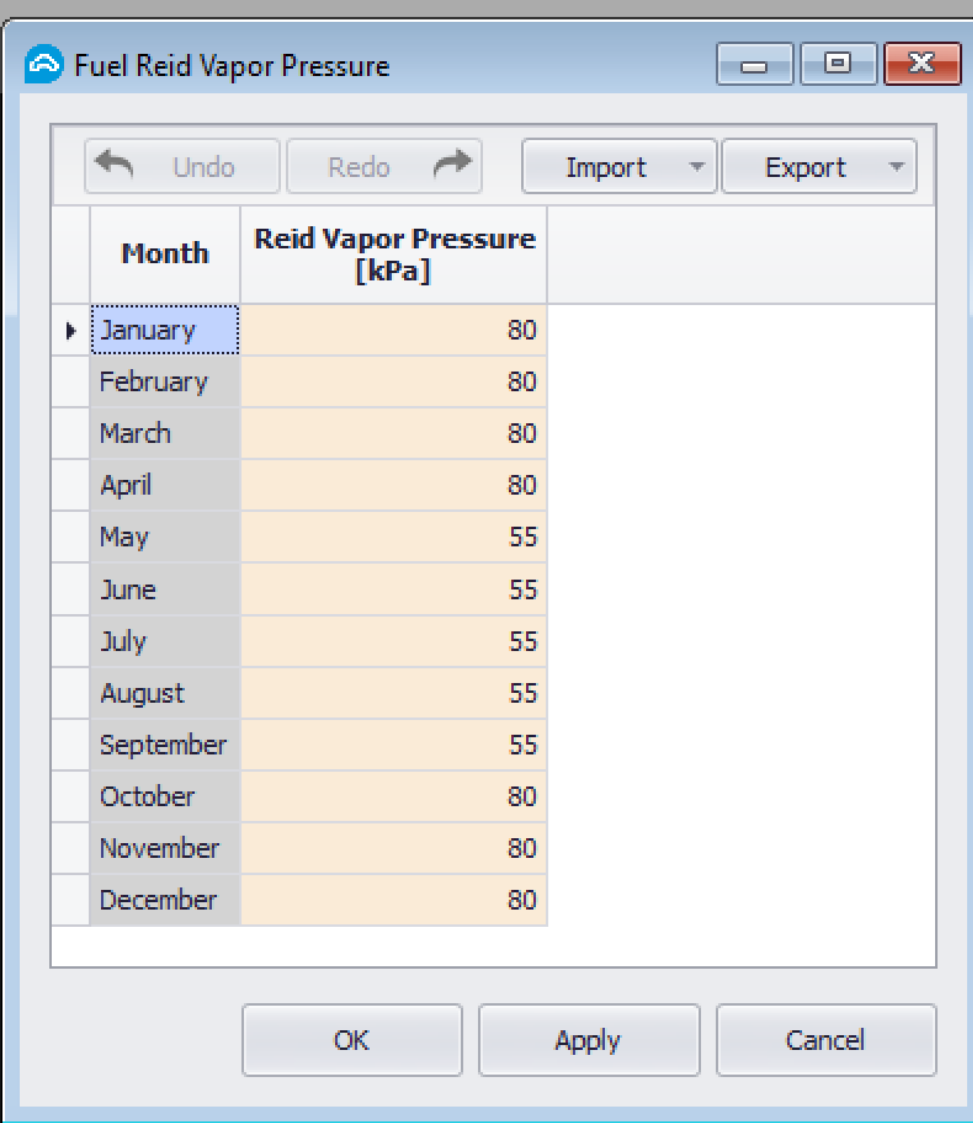

Data provided here are for primary fuels only, and there is an option to provide 2 different Petrol, Diesel, and LPG energy consumption values if such information exists.

Different values denote that in the Fuel>Specifications form different fuel characteristics have been provided by the user.

Primary Fuel	Total Fuel sales [TJ]
Petrol Grade 1	0
Petrol Grade 2	0
Diesel Grade 1	0
Diesel Grade 2	0
LPG Grade 1	0
LPG Grade 2	0
CNG	0
Biodiesel (incl. FAME)	0

Fuel > RVP (Reid Vapor Pressure)

The user may provide the Reid Vapor Pressure for each month in kPa.

The screenshot shows a software dialog box titled "Fuel Reid Vapor Pressure". It features a table with two columns: "Month" and "Reid Vapor Pressure [kPa]". The table contains 12 rows, one for each month of the year. The values for Reid Vapor Pressure are 80 kPa for January through April, 55 kPa for May through September, and 80 kPa for October through December. The dialog box also includes standard window controls (minimize, maximize, close), "Undo" and "Redo" buttons, "Import" and "Export" dropdown menus, and "OK", "Apply", and "Cancel" buttons at the bottom.

Month	Reid Vapor Pressure [kPa]
January	80
February	80
March	80
April	80
May	55
June	55
July	55
August	55
September	55
October	80
November	80
December	80

Fuel information

The user may provide the statistical energy consumption in case he/she wants COPERT to perform an energy balance

The user also has to select to "perform automatic energy balance"

The user may provide data for the Fuel specifications such as energy content and fuel density or keep the default values, also the hydrogen to carbon atom ratio (H:C ratio)

Primary Fuel	Total Fuel sales [TJ]
Petrol Grade 1	0
Petrol Grade 2	0
Diesel Grade 1	0
Diesel Grade 2	0
LPG Grade 1	0
LPG Grade 2	0
CNG	0
Biodiesel (incl. FAME)	0
Bioethanol (incl. ETBE)	0
Electricity	0

Perform automatic energy balance

Primary Fuel	Energy Content [MJ/kg]	H:C Ratio [-]	O:C Ratio [-]	Density [kg/m3]	Content In Species								
					S [ppm wt]	Pb [ppm wt]	Cd [ppm wt]	Cu [ppm wt]	Cr [ppm wt]	Ni [ppm wt]	Se [ppm wt]	Zn [ppm wt]	Hg [ppm wt]

Vehicles > Stock Configuration

This window represents one of the necessary inputs

the user selects which types of vehicles will be in the fleet of the selected year

The user may also apply the fleet configuration to other years of the selected run by checking the "All years" option at the bottom of the form

The user may also export the categories to an excel/CSV file. When the configuration is complete press OK and the appropriate data will be updated

The screenshot shows a software window titled "Stock Configuration". At the top left, there is a dropdown menu set to "All". To the right are "Undo" and "Redo" buttons, and an "Export" button with a dropdown arrow. Below this is a table with the following columns: Category, Fuel, Segment, Euro Standard, and Include. The table contains 14 rows, all of which are checked in the "Include" column. At the bottom of the window, there is an "All Years" checkbox (which is currently unchecked) and three buttons: "Check All", "Check None", "Apply", "OK", and "Cancel".

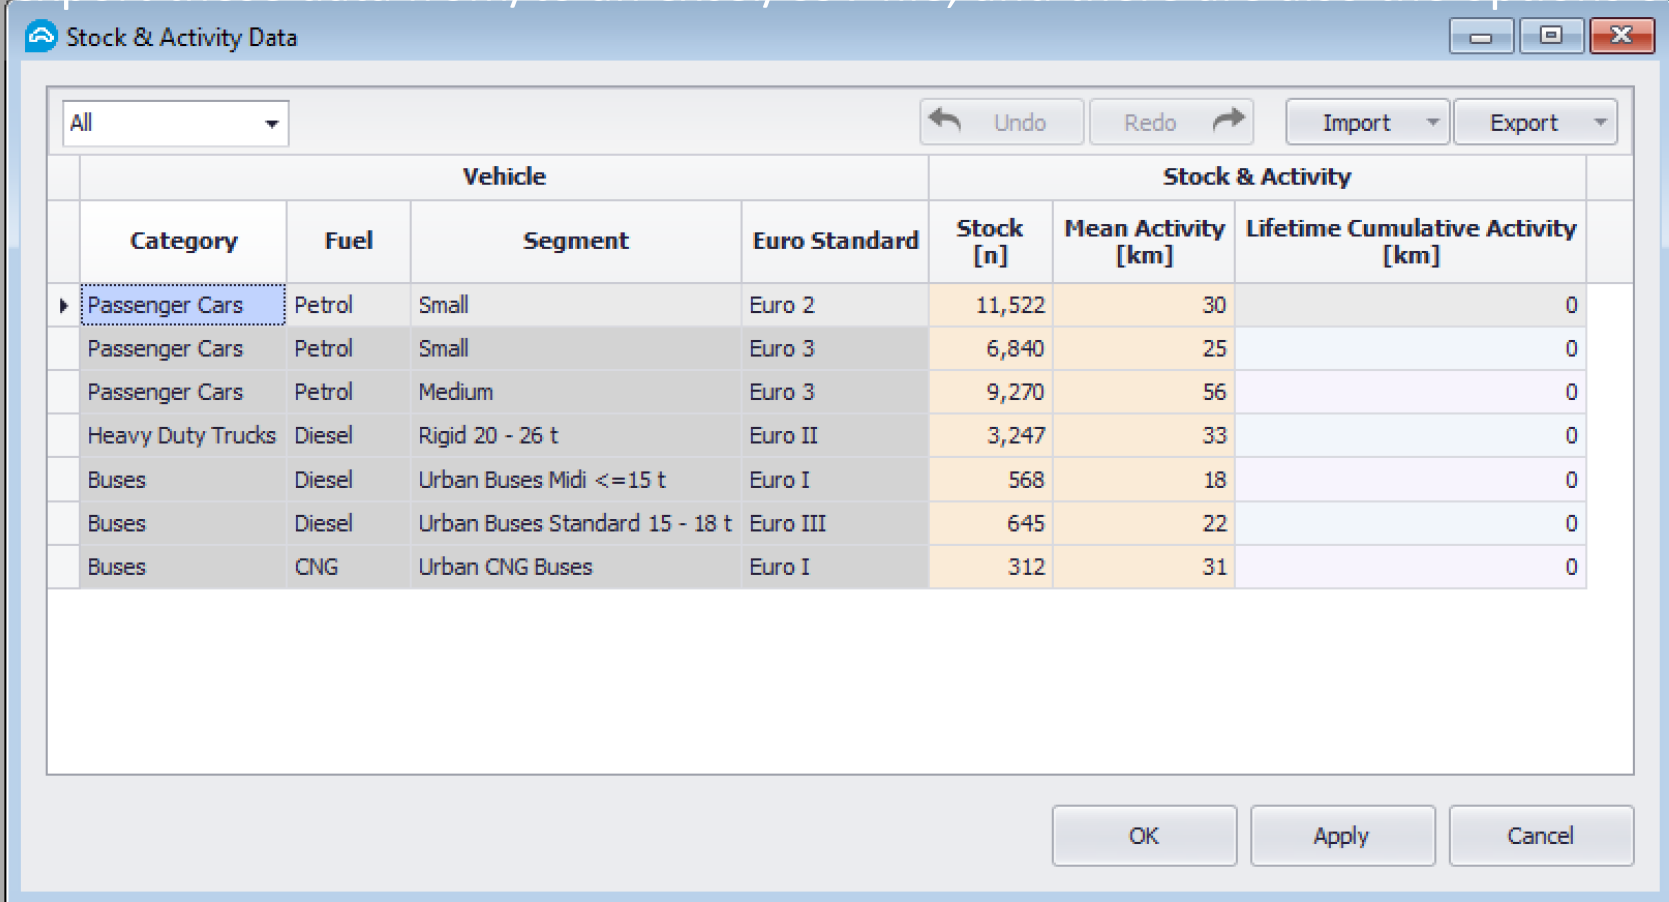

Category	Fuel	Segment	Euro Standard	Include
Passenger Cars	Petrol	Mini	Euro 4	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Mini	Euro 5	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Mini	Euro 6 a/b/c	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Mini	Euro 6 d-temp	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Mini	Euro 6 d	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Small	PRE ECE	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Small	ECE 15/00-01	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Small	ECE 15/02	<input checked="" type="checkbox"/>
Passenger Cars	Petrol	Small	ECE 15/03	<input checked="" type="checkbox"/>

Vehicles > Stock & Activity Data

This window represents one of the necessary inputs

The user types (or imports) input data for Stock, Mean Activity (km/year), and Lifetime Cumulative Activity (km)

The user is able to import/export these data from/to an excel/CSV file, and there are also the options of undo/redo available

The screenshot shows a software window titled "Stock & Activity Data". At the top left is a home icon and the title. On the right are window control buttons (minimize, maximize, close). Below the title bar is a toolbar with a dropdown menu set to "All", and buttons for "Undo", "Redo", "Import", and "Export". The main area contains a table with two main sections: "Vehicle" and "Stock & Activity".

Vehicle				Stock & Activity		
Category	Fuel	Segment	Euro Standard	Stock [n]	Mean Activity [km]	Lifetime Cumulative Activity [km]
▶ Passenger Cars	Petrol	Small	Euro 2	11,522	30	0
Passenger Cars	Petrol	Small	Euro 3	6,840	25	0
Passenger Cars	Petrol	Medium	Euro 3	9,270	56	0
Heavy Duty Trucks	Diesel	Rigid 20 - 26 t	Euro II	3,247	33	0
Buses	Diesel	Urban Buses Midi <=15 t	Euro I	568	18	0
Buses	Diesel	Urban Buses Standard 15 - 18 t	Euro III	645	22	0
Buses	CNG	Urban CNG Buses	Euro I	312	31	0

At the bottom of the window are three buttons: "OK", "Apply", and "Cancel".

Exercise data

Vehicles > Circulation Data

This window represents one of the necessary inputs

The user types (or import) the average speed(which should be within the given range in the last column) and the mileage percentage (sum should always be 100%) driven by each vehicle technology per driving mode

To filter vehicle sectors use the Sector drop-down list in the top left corner of the form

Exercise data

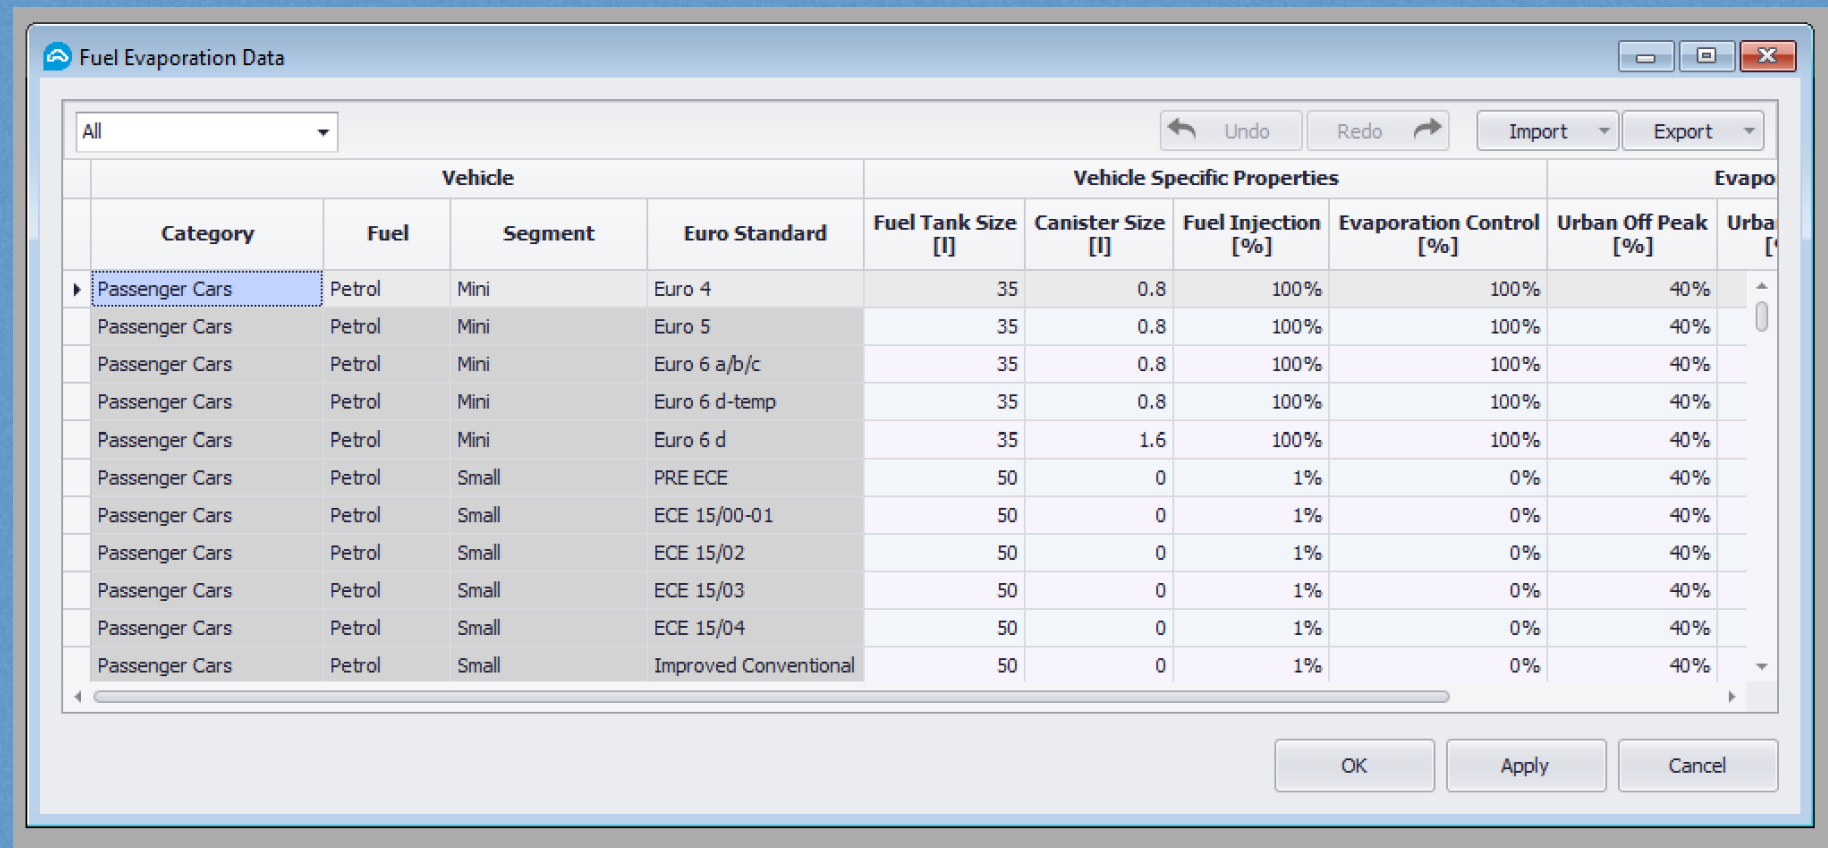

The screenshot shows a software window titled "Circulation activity" with a table of vehicle data. The table has columns for Vehicle (Category, Fuel, Segment, Euro Standard), Share (Urban Peak [%], Urban Off Peak [%], Rural [%], Highway [%]), and Speed (Urban Peak [km/h], Urban Off Peak [km/h], Rural [km/h]). The "Passenger Cars" row is selected and highlighted.

Vehicle				Share				Speed		
Category	Fuel	Segment	Euro Standard	Urban Peak [%]	Urban Off Peak [%]	Rural [%]	Highway [%]	Urban Peak [km/h]	Urban Off Peak [km/h]	Rural [km/h]
▶ Passenger Cars	Petrol	Small	Euro 2	100%	0%	0%	0%	33	0	0
Passenger Cars	Petrol	Small	Euro 3	100%	0%	0%	0%	27	0	0
Passenger Cars	Petrol	Medium	Euro 3	100%	0%	0%	0%	29	0	0
Heavy Duty Trucks	Diesel	Rigid 20 - 26 t	Euro II	100%	0%	0%	0%	21	0	0
Buses	Diesel	Urban Buses Midi <=15 t	Euro I	100%	0%	0%	0%	22	0	0
Buses	Diesel	Urban Buses Standard 15 - 18 t	Euro III	100%	0%	0%	0%	21.5	0	0
Buses	CNG	Urban CNG Buses	Euro I	100%	0%	0%	0%	21.8	0	0

Vehicles > Fuel Evaporation Data

We can find input data for Fuel Tank Size (l), Canister size (l), percentage of vehicles equipped with Fuel Injection (%), percentage of vehicles equipped with Evaporation Control (%), and the distribution of evaporative emissions to different driving modes (%)

To enter your own values, simply replace the proposed value by typing in the corresponding cell

The screenshot shows a software dialog box titled "Fuel Evaporation Data". It contains a table with columns for "Vehicle" (Category, Fuel, Segment, Euro Standard) and "Vehicle Specific Properties" (Fuel Tank Size [l], Canister Size [l], Fuel Injection [%], Evaporation Control [%]). There are also columns for "Evapo" (Urban Off Peak [%], Urban [%]). The table lists various vehicle categories, primarily "Passenger Cars", with different Euro standards and fuel injection/evaporation control percentages. The "Passenger Cars" row is highlighted. The dialog box includes "Undo", "Redo", "Import", and "Export" buttons at the top, and "OK", "Apply", and "Cancel" buttons at the bottom.

Vehicle				Vehicle Specific Properties				Evapo	
Category	Fuel	Segment	Euro Standard	Fuel Tank Size [l]	Canister Size [l]	Fuel Injection [%]	Evaporation Control [%]	Urban Off Peak [%]	Urban [%]
▶ Passenger Cars	Petrol	Mini	Euro 4	35	0.8	100%	100%	40%	
Passenger Cars	Petrol	Mini	Euro 5	35	0.8	100%	100%	40%	
Passenger Cars	Petrol	Mini	Euro 6 a/b/c	35	0.8	100%	100%	40%	
Passenger Cars	Petrol	Mini	Euro 6 d-temp	35	0.8	100%	100%	40%	
Passenger Cars	Petrol	Mini	Euro 6 d	35	1.6	100%	100%	40%	
Passenger Cars	Petrol	Small	PRE ECE	50	0	1%	0%	40%	
Passenger Cars	Petrol	Small	ECE 15/00-01	50	0	1%	0%	40%	
Passenger Cars	Petrol	Small	ECE 15/02	50	0	1%	0%	40%	
Passenger Cars	Petrol	Small	ECE 15/03	50	0	1%	0%	40%	
Passenger Cars	Petrol	Small	ECE 15/04	50	0	1%	0%	40%	
Passenger Cars	Petrol	Small	Improved Conventional	50	0	1%	0%	40%	

Vehicles > Driving Conditions

Window representing the driving conditions (loads of heavy vehicles and buses and road slopes) of the different traffic modes

A default value of 50% is given and this corresponds to the baseline emission factors of COPERT

The slope factors are calculated and applied during the calculation of the hot emission factors

The screenshot shows a software window titled "Driving Conditions" with a table of driving conditions. The table is organized into columns for Vehicle, Load, and Road Slope. The Vehicle column includes Category, Fuel, Segment, and Euro Standard. The Load column includes Urban Off Peak [%], Urban Peak [%], Rural [%], and Highway [%]. The Road Slope column includes Urban Off Peak [%], Urban Peak [%], Rural [%], and Highway [%]. The table lists various vehicle categories, including Heavy Duty Trucks, with different fuel types (Petrol, Diesel), segments (>3,5 t, Rigid <=7,5 t, Rigid 7,5 - 12 t), and Euro standards (Conventional, Euro I-VI D/E). The default values for the Load and Road Slope columns are 50% and 0% respectively.

Vehicle				Load				Road Slope			
Category	Fuel	Segment	Euro Standard	Urban Off Peak [%]	Urban Peak [%]	Rural [%]	Highway [%]	Urban Off Peak [%]	Urban Peak [%]	Rural [%]	Highway [%]
▶ Heavy Duty Trucks	Petrol	>3,5 t	Conventional	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Conventional	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro I	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro II	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro III	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro IV	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro V	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro VI A/B/C	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid <=7,5 t	Euro VI D/E	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid 7,5 - 12 t	Conventional	50%	50%	50%	50%	0%	0%	0%	0%
Heavy Duty Trucks	Diesel	Rigid 7,5 - 12 t	Euro I	50%	50%	50%	50%	0%	0%	0%	0%

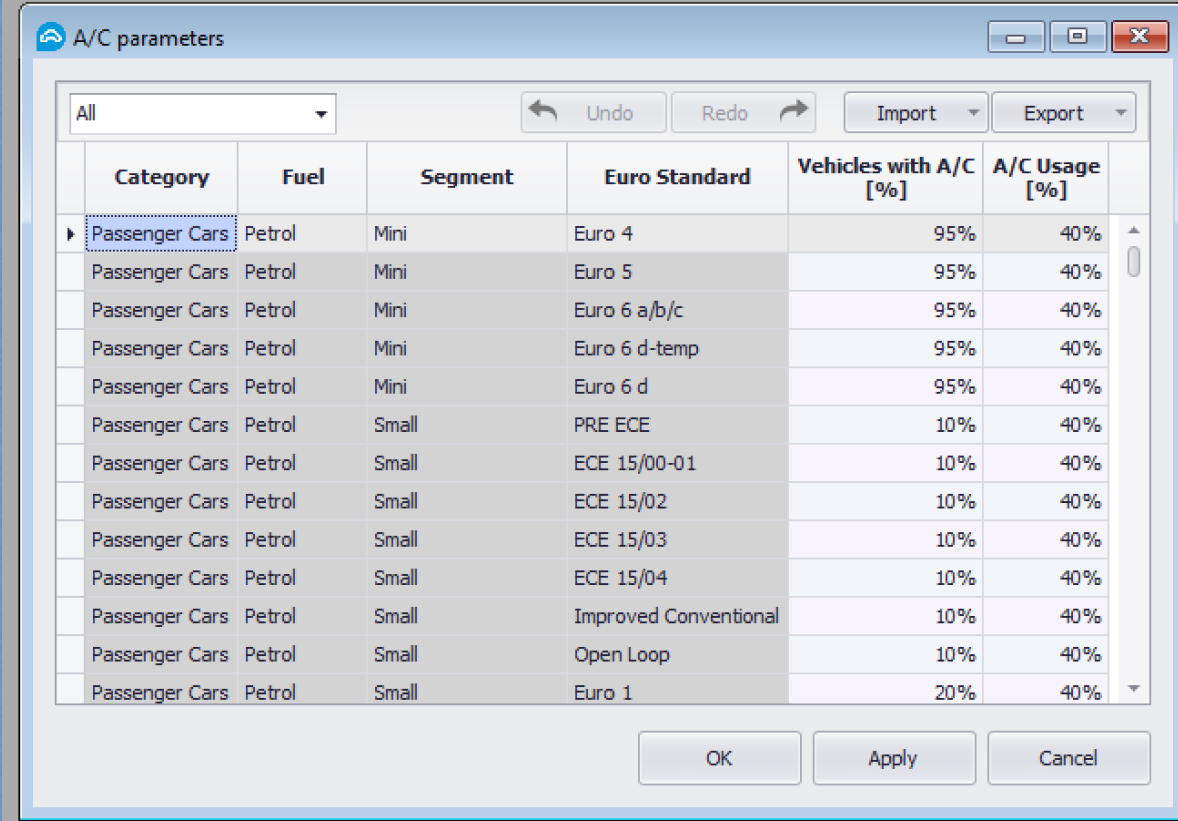

Vehicles > A/C Parameters

The user may provide the vehicles equipped with air-conditioning system (Vehicles equipped with A/C(%)). Some 'default' values are proposed which are rough estimates only

For simplicity, one single usage factor is proposed regardless of urban, rural, or highway driving

This usage factor is uniformly applied to all driving conditions

This usage factor should be integrated over the year, i.e. there is no seasonal differentiation

The screenshot shows a software dialog box titled "A/C parameters". It features a table with columns for Category, Fuel, Segment, Euro Standard, Vehicles with A/C [%], and A/C Usage [%]. The table lists various vehicle categories, all of which are "Passenger Cars" with "Petrol" fuel. The segments range from "Mini" to "Small". Euro standards include Euro 4, Euro 5, Euro 6 a/b/c, Euro 6 d-temp, Euro 6 d, PRE ECE, ECE 15/00-01, ECE 15/02, ECE 15/03, ECE 15/04, Improved Conventional, Open Loop, and Euro 1. The "Vehicles with A/C [%]" column shows 95% for Euro 4-6 standards and 10% for ECE standards, while "A/C Usage [%]" is consistently 40% for all entries. The dialog box includes "Undo", "Redo", "Import", and "Export" buttons at the top, and "OK", "Apply", and "Cancel" buttons at the bottom.

Category	Fuel	Segment	Euro Standard	Vehicles with A/C [%]	A/C Usage [%]
Passenger Cars	Petrol	Mini	Euro 4	95%	40%
Passenger Cars	Petrol	Mini	Euro 5	95%	40%
Passenger Cars	Petrol	Mini	Euro 6 a/b/c	95%	40%
Passenger Cars	Petrol	Mini	Euro 6 d-temp	95%	40%
Passenger Cars	Petrol	Mini	Euro 6 d	95%	40%
Passenger Cars	Petrol	Small	PRE ECE	10%	40%
Passenger Cars	Petrol	Small	ECE 15/00-01	10%	40%
Passenger Cars	Petrol	Small	ECE 15/02	10%	40%
Passenger Cars	Petrol	Small	ECE 15/03	10%	40%
Passenger Cars	Petrol	Small	ECE 15/04	10%	40%
Passenger Cars	Petrol	Small	Improved Conventional	10%	40%
Passenger Cars	Petrol	Small	Open Loop	10%	40%
Passenger Cars	Petrol	Small	Euro 1	20%	40%

Factors > Hot, Cold and evaporation emission factors and Beta factors

Exercise data

Hot emission factors

Category	Fuel	Segment	Euro Standard	Pollutant	Urban Off Peak [g/km]	Urban Peak [g/km]	Rural [g/km]	Highway [g/km]

Results > Implied Emission factors

This pivot table form indicates the implied emission factors for all pollutants and energy consumption in g/km or MJ/km

Please note that these are implied emission factors, which means that they are dependent not only on the traveling speed but also on the fleet configuration and input data (eg temperatures) of each run

Data are not updatable

OK Apply Cancel

Parameters > Cold parameters

The user can view and edit the cold emission parameters that are used for the calculation of the cold over-emission factors in the Factors>Cold

The parameters are indicated for each pollutant and vehicle type

Different parameters may also apply in the case of different driving modes

Exchange > Export Input Structure, Factors and Results in Excel

This form indicates a list of years included in the inventory and another list of the required input data
By clicking on the corresponding check box the user can select which information he/she wants to export to an Excel file

For compatibility reasons both Excel 2010 and Excel 2003 formats can be selected

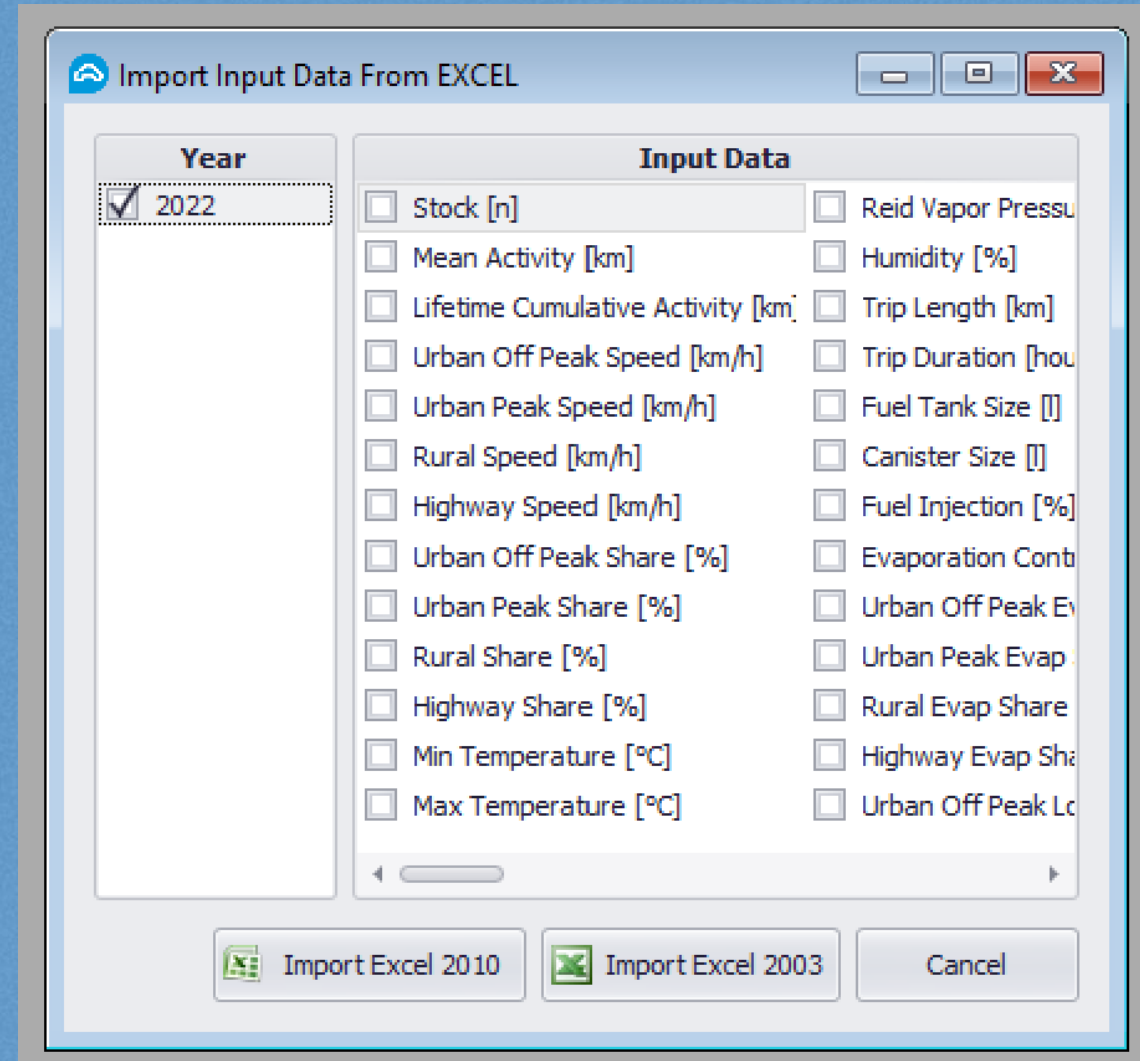

The image displays three screenshots of software dialog boxes for exporting data to Excel:

- Export Input Structure to EXCEL:** This dialog box has a 'Year' list with '2022' checked. The 'Input Data' section contains two columns of checkboxes for various parameters such as Stock [n], Mean Activity [km], Total Activity [km], Lifetime Cumulative Activity [km], Urban Off Peak Speed [km/h], Urban Peak Speed [km/h], Rural Speed [km/h], Highway Speed [km/h], Urban Off Peak Share [%], Urban Peak Share [%], Rural Share [%], Highway Share [%], Min Temperature [°C], Max Temperature, Reid Vapor Pressure, Humidity [%], Trip Length [km], Trip Duration [hours], Fuel Tank Size [l], Canister Size [l], Fuel Injection [%], Evaporation Contribution, Urban Off Peak Evaporation, Urban Peak Evaporation, Rural Evaporation Share, and Highway Evaporation Share. At the bottom, there are buttons for 'Export Excel 2010', 'Export Excel 2003', and 'Cancel'.
- Export Factors to EXCEL:** This dialog box has a 'Year' list with '2022' checked. At the bottom, there are buttons for 'Export Excel 2010', 'Export Excel 2003', and 'Cancel'.
- Export Results to EXCEL:** This dialog box has a 'Year' list with '2022' checked. It features a 'Modes' section with checkboxes for 'Urban Peak', 'Urban Off Peak', 'Rural', 'Highway', and 'Total' (checked). The 'Pollutants' section lists various pollutants (As, BC, Cd, CH4, CO, CO2, Cr, Cu, EC, Hg, LC, N2, NH, Ni, NM, NO, NO2, OM, Pb) with checkboxes. The 'Emissions' section lists various emission types (Hot, Cold, Evaporation, A/C, SCR, Lubricant, Tyre, Brake Wear, Road abrasion, Total) with checkboxes. At the bottom, there are buttons for 'Export Excel 2010', 'Export Excel 2003', and 'Cancel'.

Exchange > Import Input Data (Excel File)

By clicking on the corresponding check box the user can select which input information he/she wants to import from an Excel file and for which years

For compatibility reasons, both Excel 2010 and Excel 2003 formats can be selected

Exchange > CRF Export (CRT MPGs/Accord Paris)

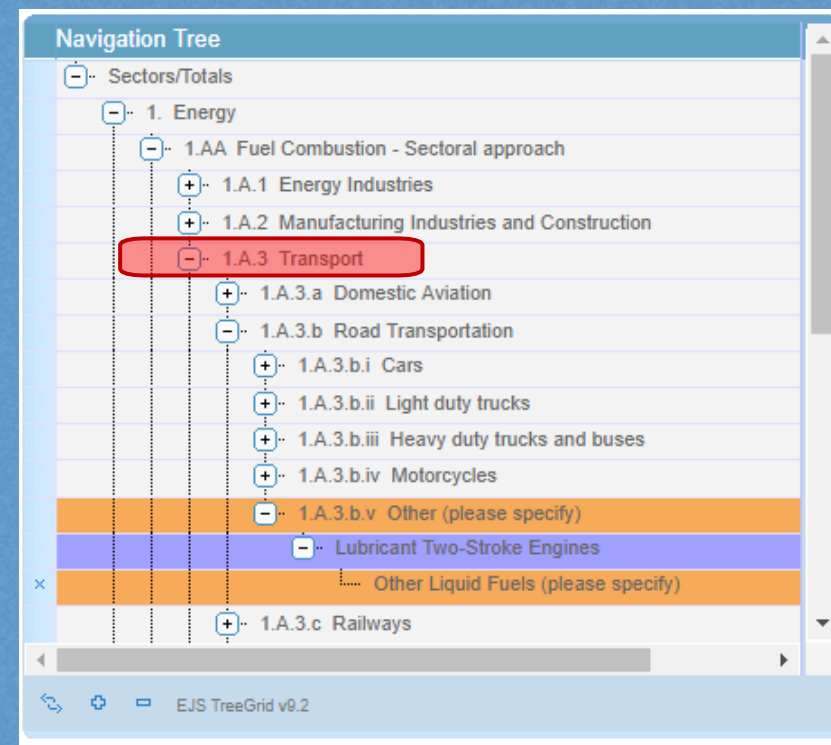

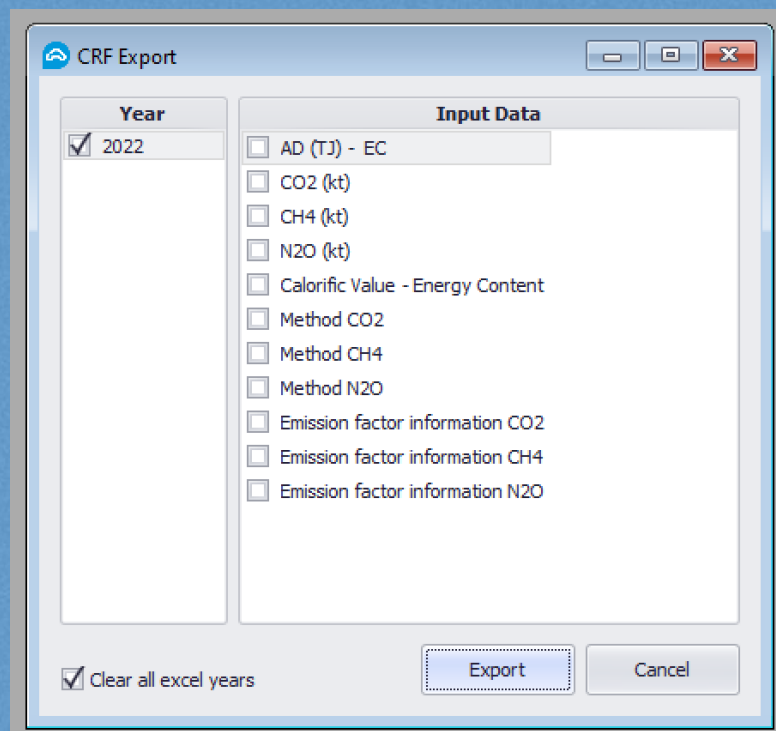

Export data to the CRF file after calculating emissions from all years

Before performing any export, the user should export the corresponding excel template (including the structure/nodes and the years) from the CRF reporter

Select the year(s) and the relevant information (i.e. activity data, emissions etc) that he/she wishes to export

By clicking the option “Clear all excel years” all information included in the file (as exported by the CRF reporter) will be erased

In order to upload the exported data to the CRF Reporter, this empty file should be imported in the CRF Reporter

Timeseries Results > Total Emissions - Timeseries

This is the same pivot form as the Results>Total Emissions form with the difference that the user can have an overview of all results for the complete timeseries, if exists in the file

The screenshot shows a software window titled "Emissions for All Years" with a search filter set to "CO [t]". The main data is a pivot table for the year 2022, showing CO emissions in tonnes (t) for various vehicle categories. The table is organized into columns for "Year" and "Emission", with a sub-section for "2022" that further breaks down into "Hot" and "Cold" conditions. Each condition is further divided into "Urban Off Peak", "Urban Peak", "Rural", and "Highway" scenarios, with a "Total" column for each. The "Emission" column is currently collapsed, showing only the "Year" column. The "Export" button is visible in the top right corner.

		Year	Emission										
		2022											
		Hot					Cold						
Category	Fuel	Segment	Urban Off Peak	Urban Peak	Rural	Highway	Total	Urban Off Peak	Urban Peak	Rural	Highway	...	
Passenger Cars	Petrol	Small	0	0.34	0	0	0.34	0	0.0257	0		0.0	
		Medium	0	0.2551	0	0	0.2551	0	0.0107	0		0.0

Close

Conclusions

COPERT interface and functions :

- Can be utilized by all countries
- Calculating emissions of all pollutants from road transportation (GHG, Precursors, NMVOCs)
- All categories of road vehicles covered
- Fuel consumption calculated (energy balance)

Day 3

Wednesday 25 September 2024

15:00 – 17:00 (Bonn Time)

Session 5

Higher tier methods for estimating GHG emissions from road transportation

COPERT model: input data and database construction

By the end of this session, you will:

1. Get familiar with the different menus, buttons and options
2. Data entry and use of different structure of databases
3. Identify difficulties while using Copert features

Learning objectives

Entry of activity data

- Data input of all **activity data** (fleet, circulation and **evaporation** data) can be done in 3 ways:
 - A. Direct data entry Input (Manually): with and without Wizard
 - B. Imported from Microsoft Excel
 - C. Imported from COPERT

Direct data Input 1/3

- Enter activity data directly via the forms under the 'Vehicles' menu:
 - ✓ Stock & Activity Data
 - ✓ Circulation Data
 - ✓ Fuel Evaporation Data
- Open each form; fill the desired values for every vehicle category

Stock & Activity Data

Vehicle				Stock [n]	Mean Activity [km]
Category	Fuel	Segment	Euro Standard		
Passenger Cars	Petrol	Small	Euro 2	11,522	30
Passenger Cars	Petrol	Small	Euro 3	6,840	25
Passenger Cars	Petrol	Medium	Euro 3	9,270	56
Heavy Duty Trucks	Diesel	Rigid 20 - 26 t	Euro II	3,247	33
Buses	Diesel	Urban Buses Midi <=15 t	Euro I	568	18
Buses	Diesel	Urban Buses Standard 15 - 18 t	Euro III	645	22
Buses	CNG	Urban CNG Buses	Euro I	312	31

Circulation activity

Vehicle				Share				Speed		
Category	Fuel	Segment	Euro Standard	Urban Peak [%]	Urban Off Peak [%]	Rural [%]	Highway [%]	Urban Peak [km/h]	Urban Off Peak [km/h]	Rural [km/h]
Passenger Cars	Petrol	Small	Euro 2	100%	0%	0%	0%	33	0	0
Passenger Cars	Petrol	Small	Euro 3	100%	0%	0%	0%	35	0	0
Passenger Cars	Petrol	Medium	Euro 3	100%	0%	0%	0%	28	0	0
Heavy Duty Trucks	Diesel	Rigid 20 - 26 t	Euro II	100%	0%	0%	0%	25	0	0
Buses	Diesel	Urban Buses Midi <=15 t	Euro I	100%	0%	0%	0%	22	0	0
Buses	Diesel	Urban Buses Standard 15 - 18 t	Euro III	100%	0%	0%	0%	21.5	0	0
Buses	CNG	Urban CNG Buses	Euro I	100%	0%	0%	0%	21.8	0	0

Fuel Evaporation Data

Vehicle				Vehicle Specific Properties				Evaporation Share			
Category	Fuel	Segment	Euro Standard	Fuel Tank Size [l]	Canister Size [l]	Fuel Injection [%]	Evaporation Control [%]	Urban Off Peak [%]	Urban Peak [%]	Rural [%]	Highway [%]
Passenger Cars	Petrol	Small	Euro 2	50	0.5	100%	100%	40%	40%	10%	
Passenger Cars	Petrol	Small	Euro 3	50	0.8	100%	100%	40%	40%	10%	
Passenger Cars	Petrol	Medium	Euro 3	60	1	100%	100%	40%	40%	10%	

Direct data Input 2/3

The information is provided by the user or calculated by COPERT and can be modified by the user

A modified value will be displayed in red color, and if the "Apply" button is pressed, this color changes to the default color, which is black

All forms are equipped with "Undo" and "Redo" buttons and import and export buttons directly from the form to and from an Excel or csv file

The image shows three sequential screenshots of the 'Environmental Information' dialog box, illustrating the process of applying a user modification to the humidity data for January. The dialog box contains a table with columns for Month, Min Temperature [°C], Max Temperature [°C], and Humidity [%].

Month	Min Temperature [°C]	Max Temperature [°C]	Humidity [%]
January	15	31	42%
February	18	35	43%
March	22	38	38%
April	26	42	35%
May	27	41	33%
June	26	39	51%
July	25	36	61%
August	24	34	72%
September	24	36	75%
October	23	38	40%
November	19	36	31%
December	16	33	35%

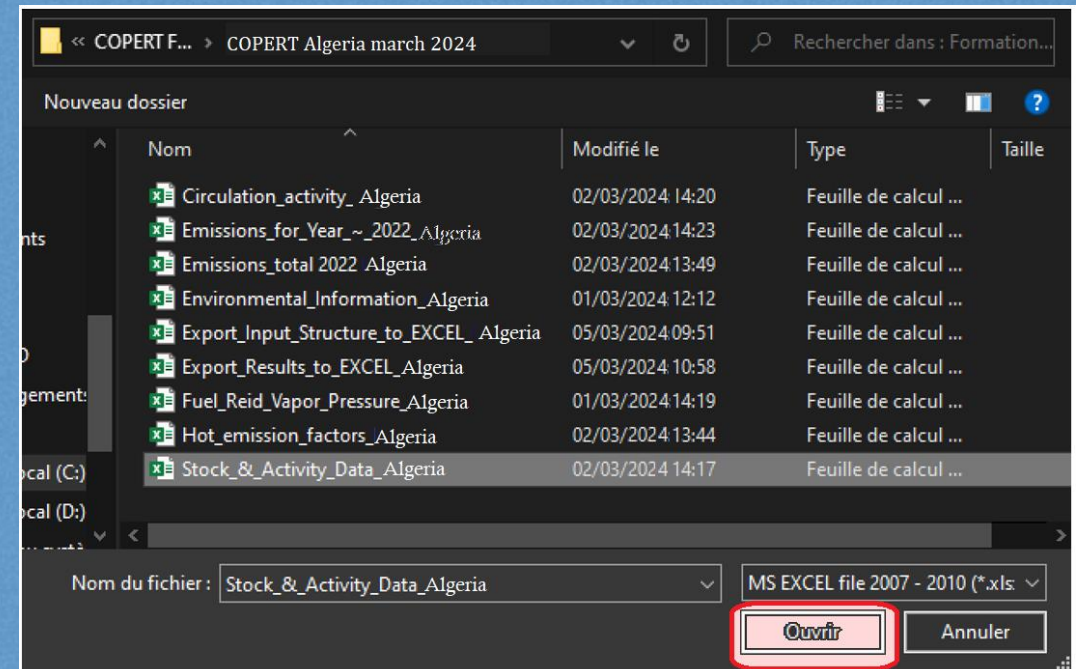

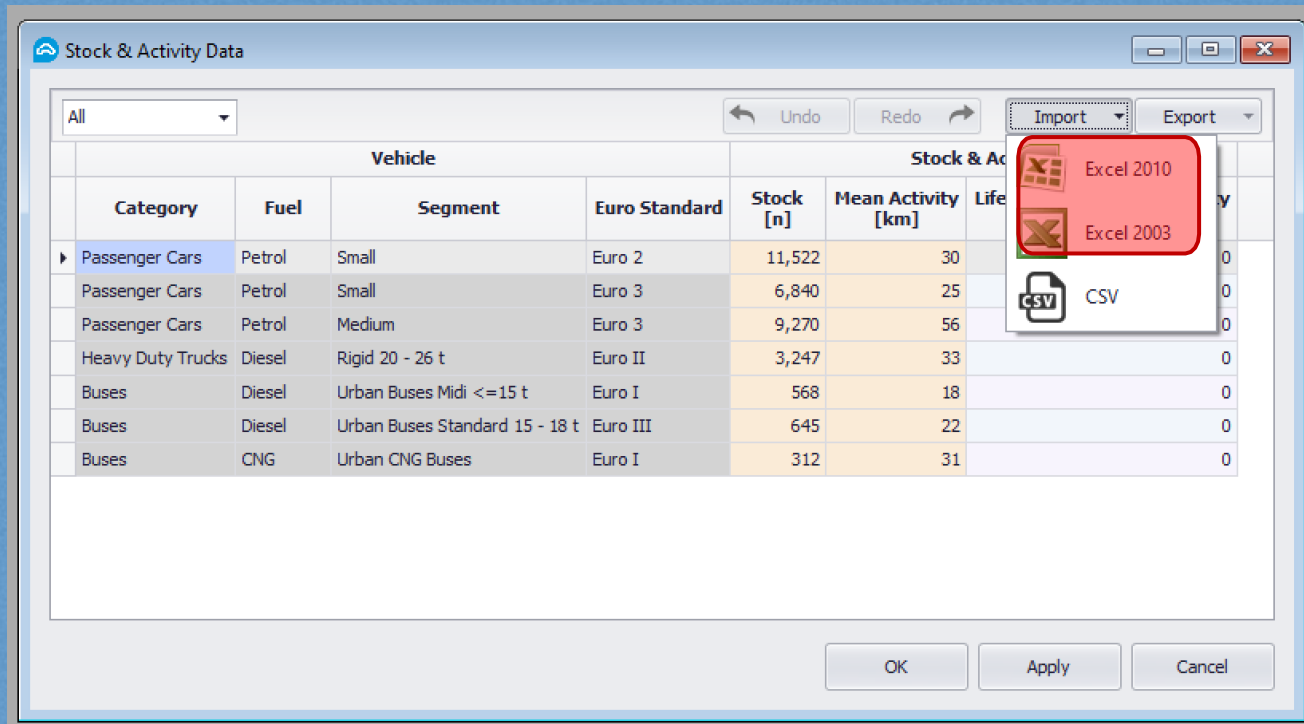

In the first screenshot, the humidity value for January (42%) is circled in red. In the second screenshot, the humidity value for January has been changed to 44% and is now displayed in red. In the third screenshot, the 'Apply' button is highlighted, indicating that the user has pressed it, and the humidity value for January is now 44% in black text.

Direct data Input 3/3

1. Data entry on COPERT interface (Tier 2 & Tier 3)
2. Export of data entered on COPERT (Tier 2 & Tier 2) to Excel file
3. Modification of data (Tier 2 & Tier 3) in Excel file
4. Import modified (Tier 2 & Tier 3) Excel data file to COPERT

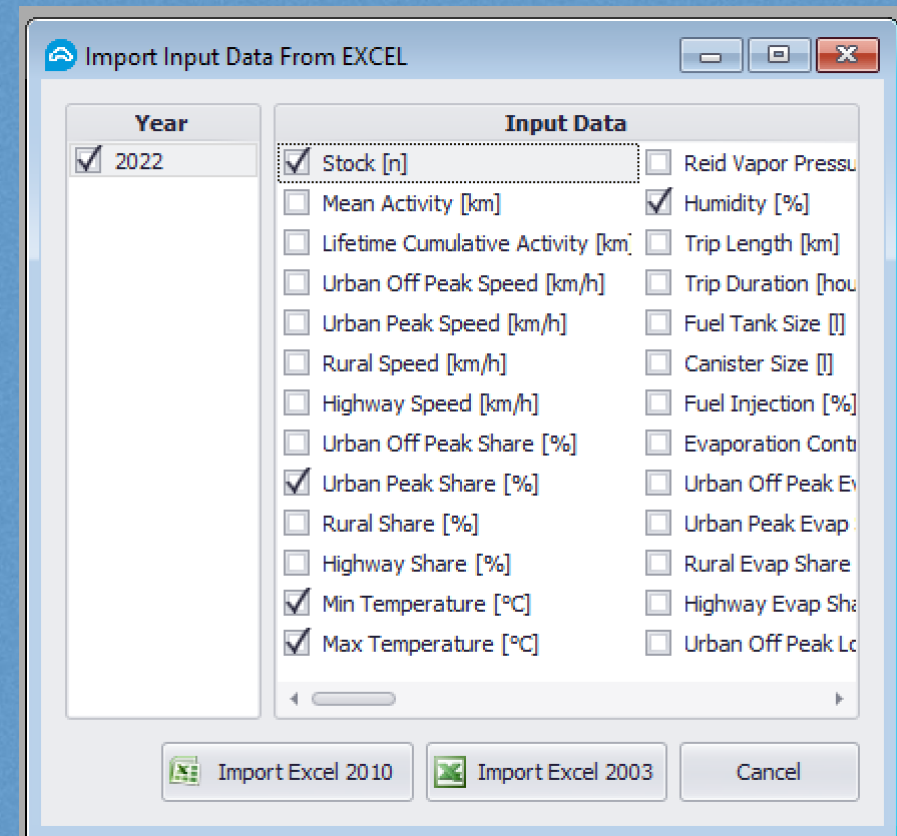

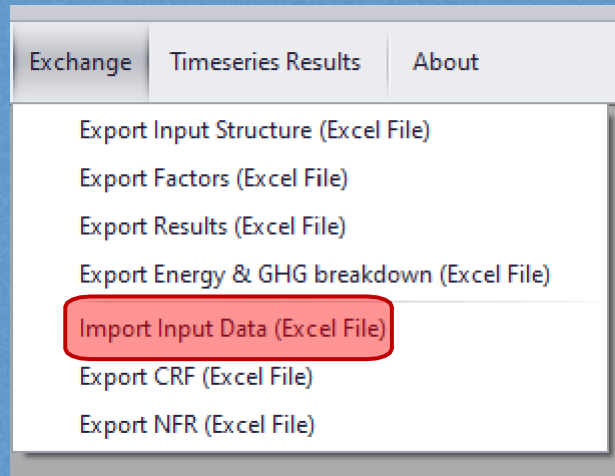

Import Data from Microsoft Excel file (1/4)

- Import data from Excel file
- Open the form 'Vehicle' > 'Stock & Activity Data' > 'Import (Format Excel File)'

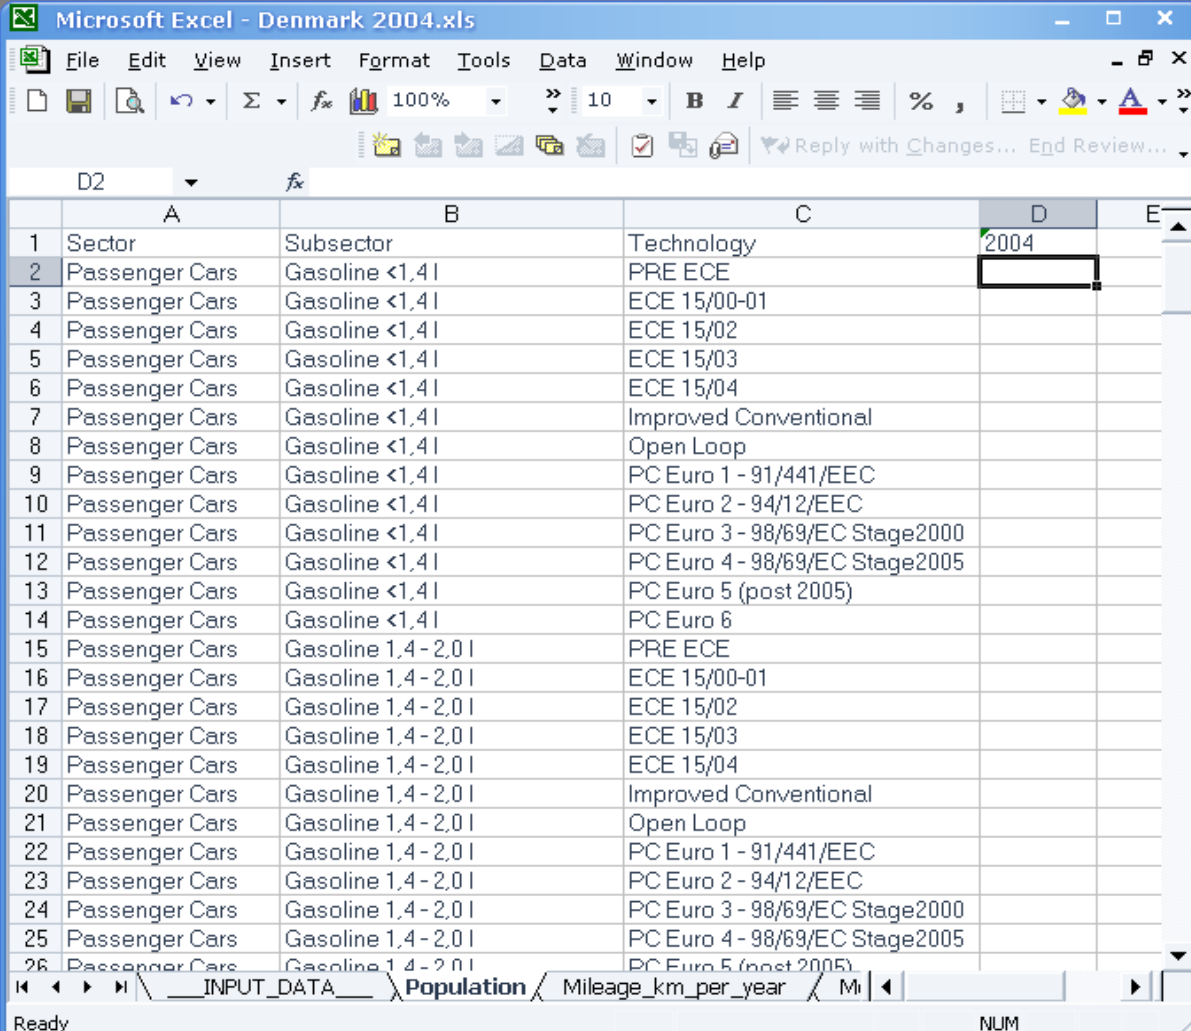

Import Data from Microsoft Excel file (2/4)

1. Select Exchange > Import Input Data (Excel file)'
2. Select the year or years (if there are several)
3. Select the data you wish to import (list of 'Input Data') by checking the corresponding boxes

Import Data from Microsoft Excel file (3/4)

- Open the Excel file created
- Every selected **data type** is a **different sheet** in the Excel file
- Every selected **vehicle category** is a **row**
- Every selected **year** is a **column**

Import Data from Microsoft Excel file (4/4)

- Fill the cells of the year columns with the desired values
- For example, the mileage for the year '2004' of a vehicle category is 10,000 km
- Leave a cell empty if you want the database data value not to be changed

Note:

If a vehicle category does not exist in a fleet configuration of a specific year then the cell of the Excel file will have the value **'not exists'**. You should not change that value

After you fill the desired values save and close the Excel file

Hands-on exercises to enter, select and modify data

Online demonstration using COPERT

Input data needed

1. **Fleet** (vehicle fleet in operation per category)
 - A. Passenger transport (passenger cars, buses, L-category vehicles)
 - B. Freight transport (light commercial vehicles, heavy duty trucks)
 - C. Split per fuel (energy) type, segment subcategories, and technologies/Euro standards
2. **Mileage:** Average annual distance driven [km/vehicle]
3. **Speeds:** Average travelling speeds in urban, rural, highway modes [km/h]
4. **Activity shares:** Share of activity in urban, rural, highway modes [%]
5. **Temperatures:** Country average [$^{\circ}\text{C}$]
6. **Fuel consumption:** sales (Statistics) [TJ]
 - Energy content of primary fuels [MJ/kg]
 - Fuel mixture(s) used
 - Energy share of fuel mixtures [%]

Conclusions

- Practical use of COPERT features
- Calculation of GHG and other pollutants (precursors, fugitives) emissions
- Import/export of input data with Excel
- Export of emissions results to Excel

Day 4

Thursday 26 September 2024

15:00 – 17:00 Bonn Time

Session 6

**Higher tier methods for estimating GHG emissions from road transportation
COPERT model: implementation of Tier 2 and Tier 3 methods to estimate GHG emissions**

Demonstration using COPERT interface with hands-on exercise

By the end of this session, you will:

1. Build the vehicle database with all categories
2. Understand how to enter data for T1 and T2
3. Know how extracting and exporting the results in XLS format
4. Know how exploring and using T1 and T2 results

Learning objectives

Hands-on Exercise to estimate GHG emission with Tier 2

1. - Calculation of road transport emissions with Tier 2
2. - Use of data set from the Niger vehicle stock (2016 – 2020)
3. - Use of average annual mileage travelled by each category of vehicles in Niger

Online Demonstration using COPERT

Hands-on Exercise to estimate emission with Tier 3

1. Calculation of GHG road transportation emissions with Tier 3
2. Use of data set from the Niger vehicle stock (2016 – 2020)
3. Use of average annual mileage travelled by each category of vehicles in Niger
4. Use of traffic activity data (average urban speeds) for the different categories of vehicles running in Niger

Online Demonstration using COPERT

Hands-on exercise

Estimation of GHG, precursors and fugitive emissions

Conclusions

- COPERT does not use Tier 1
- COPERT applies only higher tiers (Tier 2 and Tier 3)
- Accuracy of calculation results and large range of pollutants covered
- Required input data and calculation steps for Tier 2 and Tier 3
- Need of development of practical skills to use COPERT

Day 5

Friday 27 September 2024

15:00 – 17:00 Bonn Time

Session 7

**Other key functions of the COPERT model:
Energy balance of road transportation, GHG emission and
fuel consumption projections (NDC)**

By the end of this session, you will:

1. Know how COPERT estimates the fuel consumption of the vehicle stock
2. Understand how to set assumptions to build scenarios for emission projections
3. Understand how to use COPERT to estimate GHG emission projections based on different scenarios

**Learning
objectives**

Hands-on exercises

Estimation of fuel balance from road transportation

Vehicle stock of NIGER

Assumptions on annual mileage in NIGER

Vehicles	Fuels	Assumptions
		Average annual mileage (km/y)
Passenger Cars	Petrol	8 000
	Diesel	8 000
Light Commercial Vehicles	Petrol	10 000
	Diesel	10 000
Heavy Duty Trucks Rigid	Diesel	13 000
Heavy Duty Trucks – Articulated	Diesel	13 000
Buses - Coaches Standard	Diesel	15 000
Mopeds 2-stroke	Petrol	3 000

Fuel consumption estimation by COPERT using vehicle stock data and assumptions on mileage for NIGER

Hands-on exercises

Estimation of emission projections for different scenarios of road transportation

Assumptions for road transportation scenarios

- **Vehicle stock**: number of vehicles registered (new, used) per category, fuel , age, technology (new transportation policy, vehicle emission regulations , vehicle incentives, etc.)
- **Vehicle use**: public transportation policy, fuel pricing, regulations, inspection & maintenance,
- **Road traffic characteristics** : road type, speed mileage, hot and cold start (infrastructure, traffic managment plan, etc.),

Current vehicle stock

Category	Fuel	Segment	Euro Standard	1990	1995	2000	2005	2010	2015	2020	2024	2030	2035	2040

Development of road transportation scenarios

**Projection of GHG, Precursors and Fugitives
emissions for road transportation**

Online Demonstration with COPERT

Session 8

Closing session

- Lessons learnt from the Webinar
- Next steps
- Closing remarks by the UNFCCC Secretariat

Thanks for your participation and interest in COPERT
