Supervisory Body

United Nations Framework Convention on Climate Change (UNFCCC)

RE: Input to SB005 Annotated Agenda and Related Annexes

Dear Supervisory Body:

From the Ground Up is grateful for the opportunity to provide feedback on the Article 6.4 Supervisory Body's Information note on Removal activities under the Article 6.4 mechanism Version 04.0.

Our organization is attempting to create a full cycle, carbon dioxide removal solution. We will create composters to build and clean soils of pesticides and Dioxins. If successful, we can eventually compost and eliminate half the landfills.

Soil can grow plants to clean the air, rivers, and oceans. We have a market for all the dog waste we can compost because it becomes tree fertilizer. We will use it to complete the reclamation programs of the mining industry to regrow forests and save watersheds devastated from the mining industry. We need to change farming practices. We advocate Hemp growth to dominate the packaging, cardboard, paper, clothing, building material (wood alternatives), and concrete industries.

Carbon dioxide removal needs to be recognized by all people as a viable solution to meeting our Paris Climate Accord goals. We strongly disagree with the recommendation that CDR is not compatible with economic development/diversification. If these technologies are deployed in an equitable, responsible way, they will contribute to creating a new market and lifestyle where humans are giving back to the Earth as opposed to simply taking all they can get.

Thank you for giving the environmentalist an opportunity and a voice to provide feedback on this note; a voice that has been kept silenced for too long, an opportunity to share valuable climate solutions.

Sincerely,

Pat Visocky
