

Global Stocktake Third Technical Dialogue – Integrated and holistic approaches roundtable
Japan intervention

We would like to thank the Co-facilitators for your work and emerging messages. We would like to share our views on key messages presented by co-facilitators and highlight three points.

First, we agree that international cooperation should be included here as a crucial element. International cooperation is critical to achieving climate-resilient, nature-positive and sustainable development priorities guided by the 2030 Agenda for sustainable development, leaving no one behind. City-to-city cooperation, expansion of the business model for regional decarbonisation and promoting adaptation in the region are one of the ways to reduce GHG emissions on a global level.

Second, non-party stakeholders, especially subnational actors, play a vital role in realising the transformation toward net-zero, climate-resilient, circular, and nature-positive economies, furthering socioeconomic opportunities based on local capacity, needs and individual environmental conditions. GST can send a message to non-party stakeholders to further enhance actions towards achieving the goals of the Paris Agreement. It is also important to strengthen international cooperation and collaborative initiatives between Parties and non-Party stakeholders.

Third, we stress the importance of the best available science and evidence in policy making. We need to take immediate and concrete actions to drive down emissions to keep a limit of 1.5°C temperature rise within reach and build resilience to climate impacts globally. Findings from the Synthesis Report of the IPCC AR6 state that demand-side measures and new end-use service provision can reduce global GHG emissions in end-use sectors by 40-70 percent by 2050 compared to the baseline. It is important to consider and promote both demand and supply-side measures by combining regulations, support and private finance, which will contribute to decarbonisation, overcoming the energy crisis and achieving economic growth.

Thank you.
