Supporting renewable energy integration through smart grids and sector coupling

The MENALINKS programme aims to support the integration of renewable energy to the grid in MENALINKS countries – Morocco, Tunisia, Egypt, Jordan and Turkey – by leveraging sector coupling, smart grid and flexibility options.

Sector coupling refers to the link between the power sector and end-use sectors such as transport, industry, and buildings. Making energy demand from these sectors more flexible can create a better match with available renewable energy resources and thereby accelerate the transition to cleaner energy sources. Using sector coupling technologies in a smart way can facilitate the grid integration of renewables, promote the decarbonization of various sectors and offer benefits to multiple stakeholder groups.

However, despite their potential, sector coupling, flexibility and smart grid solutions still encounter obstacles like regulatory, technical, and financial barriers. MENALINKS supports its partner countries in identifying and overcoming these challenges to unlock their renewable energy potential and achieve their climate goals while enhancing grid integration, operation, and system flexibility.

ABOUT GCF PROJECTS & PROGRAMS

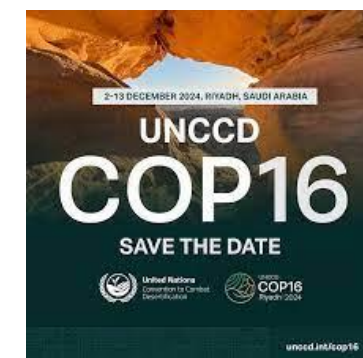

Leveraging the Private Sector for Increased Climate Investment and Strengthened Partnerships in the West Asia Region

This proposal seeks to improve the enabling environment for private-sector partners in climate finance in the region. Specifically, the proposal will focus on private sector direct access applicants, potential future DAEs, Executing Entities (EEs) and National Designated Authorities (NDAs) to develop effective public-private partnerships for stimulating greater engagement and increasing private investment in climate change mitigation and adaptation. The

ISDB POTENTIAL SUPPORT FOR MENA MEMBER COUNTRIES & NDCs (iii)

- Strong presence in MENA region events & related announcements

IsDB POTENTIAL SUPPORT FOR MENA MEMBER COUNTRIES & NDCs (IV)

- Currently, IsDB is chair of the Multilateral Development Bank (MDB) Climate Heads Working Group
- MDB trajectory of enhanced support
 - Increased country level collaboration – Country-led platforms
 - Increased focus on measuring results and outcomes
 - Long-Term Strategies (LTS) – New joint MDB LTS Program to coordinate support to countries and sub-national entities for Long-term climate strategies, including Just Transition
 - Attracting private capital at scale – greening financial systems, carbon pricing, etc.
 - Adaptation and disaster risk management – Loss and Damage Fund & Early Warning for All Initiative
 - Strengthened frameworks on nature, water, health and gender

COP28: Multilateral Development Banks boost joint action on climate and development
