Subject: Structured Public Consultation - Removal Activities

I just became aware of a requested response on June 19 2023, about one hour before boarding a flight. TeamIOB recognizes that mitigation proposals to control runaway climate change is controversial. Our proposal is a solution for water shortages. A solution for tremendous improvements in water desalinization is not controversial. The byproduct of our solution is carbon removal. Though our solution likely does not meet the 100 year sequestration requirement of the Musk sponsored XPrize, it does enhance our planets natural carbon cycle in a sufficient manner such that atmospheric CO2 would be returned to pre industrial age levels and in a profitable revenue producing manner. Details are on our website at TeamIOB.org.

Thank you
Jim Ransom
