

How can the existing work and processes under the Convention and the Paris Agreement facilitate or enhance action on land and CCA?

It is evident that further understanding regarding how to enhance implementation of science robust and technologies developed accordingly to local climate conditions and circumstances are yet fundamental element

Nairobi Work program is important

The issues to be considered by NAP and other efforts outside convention as well such as CBD and SFA

Under the UNFCCC Koronivia discussion has proven to be firmly engage in developing understandings regarding agriculture as a particular vulnerable sector, majorly responsible to deliver food security to a very uneven and still very unequal world

Guided by the UNFCCC discussions on issues related to agriculture, in Brazil the ABC Plan improved public awareness regarding climate change and how agriculture could play a major role in face of the expected challenges

The Koronivia JWP, the NWP, and Research Dialogue

The key factor is, that the UNFCCC has created the international framing and the enabling environment with discussions on issues related to agriculture and more recently with the Koronivia discussions

UNFCCC constituted-bodies to form a single task force to work on land/CCA issues

Focus on inviting stakeholders that usually are not heard to share their views.

How can the existing work and processes under the Convention and the Paris Agreement facilitate or enhance action on land and CCA?

Sharing of successful actions as well as failed policies and actions to guide other actors

Link SBSTA dialogue with Research & Systematic Observation agenda items, as well as with NWP. Then link these to implementation under SBI.

a

Use experiences and tools on ecosystem-based adaptation, e.g. CBD voluntary guidelines, to create linkages between land and environment, e.g. on ecosystem restoration

Create strong synergies between NDC update + implementation, NAP process and also Post 2020 Global Biodiversity Framework. All NBSAP, National Biodiv Action Plans, have to be updated after CBD COP next year!

According to NDC Partnership, 97% of countries plan to enhance ambition on adaptation in their updated NDC. We need to create synergies with NAP, NBSAP, Sendai targets, Agriculture policies etc esp. on land degradation and restoration.

Believe that actions only under UNFCCC/PA are important - but also outside, for instance CBD, FAO, UNEA etc

AFOLU is the sector with strongest links between mitigation and ecosystem-based adaptation EbA as a type of nature-based solutions NbS, also also links to UNCCD. Use UN Decade on Ecosystem Restoration 2021-2030 to highlight this!

Koronivia has been an important initiative to improve understanding of the relationship between climate change and agriculture

How can the existing work and processes under the Convention and the Paris Agreement facilitate or enhance action on land and CCA?

Need more cooperation across conventions such as CBD and CCD

The UNFCCC programmes recognise the importance of land in the climate system i.e. through the Koronivia Joint Work on Agriculture.

How can other international frameworks and processes be leveraged or take more actions to raise ambition to land and climate change adaptation?

through joint event to share knowledge

by providing them with recommendations out of SBSTA and SBI organized existing items

Need to strengthen joint action frameworks with CCD and CBD among others

Align Update of National Biodiversity Sustainable Action Plans NBSAP (after CBD COP) with NAP processes

CBD can help on restoration of biodiversity richness and resilience to climate change that can complement land and ecosystem based adaptation.

Next year the 3 Rio Conventions (UNFCCC, CBD, UNCCD) will hold their Conference of the Parties. This represents an excellent opportunity to create synergies on land and climate related matters

Increase funding for concrete implementation on the ground and ensure coordination and cooperation across frameworks.

ICC to adopt ecocide as crime. IPCC findings, including to the SRCCL, to be a more accessible and practical in relation to regional farming communities.

developing analysis tool combining biodiversity, combating desertification, and climate change with clear indicators to set up planning and actions

How can other international frameworks and processes be leveraged or take more actions to raise ambition to land and climate change adaptation?

UNFCCC to link up with CBD and UNCCD through joint events - resulting in e.g. policy briefs, targeted focus under Green Climate Fund, sponsored research programmes.

Land is a particular vulnerable sector responsible to delivering food security to the world. Ambition should be focused in reducing the vulnerability of the sector.
