**Subject:** Inputs on A6.4-MEP002-A01: Draft Standard: Demonstration of Additionality in Mechanism Methodologies (version 01.0)

You don't often get email from supratik.dutta@asvata.com. [Learn why this is important](#)

Dear MEP support team,  
Pls. find below my input points on the above-mentioned document

1. In Para 8, the additionality standard will be applicable for new proposed methodology, thus I would suggest incorporating bold highlighted portion in the statement "This version of the standard is applicable to ***approved and proposed*** mechanism methodologies for projects.
2. In the para 15, there is a project where emission reduction possible from two or more components and major component using unique or first of its kind technology, thus standard need to be flexible to demonstrate the additionality through major component of the project also along with single entity suggested in current version of standard.
3. The standard need to flexible to allow local government approved financial model also along with CAPEX and OPEX model mentioned in para 36.
4. In Para 45, standard should give more transparent guidance on how to confirm meet common practice criteria where no published article or relevant documents available on project or technology.

Happy to clarify in case any query on the above.
