

Pledge to Net Zero is established to advance credible, science-based climate action across the environmental and engineering professional services sectors.

Our 220 signatories include major environmental consultancies, professional bodies, and service providers, collectively representing a significant share of the environmental services market.

All signatories must:

1. adopt a 1.5°C-aligned near and long-term targets in line with SBTi's Corporate Net Zero standard;
2. publicly report their carbon emissions each year; and
3. use their professional expertise to support the advancement of a net zero economy through research, or by supporting others in addition to their fee-earning work.

As with Race To Zero membership, full HLEG-aligned members must demonstrate each year that they meet the ten requirements set out in HLEG's *Integrity Matters* report.

Pledge To Net Zero is administered and run by an expert steering group drawn from across our sectors. Members report their performance each year to the steering group.

We welcome new members – please visit our website for more details of how to get involved and be part of leading climate action.
