Subject: SBM023 - annotated agenda and related annexes

Dear colleagues,

I would like to make the following submission re document A6.4-MEP016-A04: I fully support the approach to address reversal risks of cookstove projects proposed by the MEP. None of the other potential approaches listed in the appendix addresses reversal risks in a sufficiently robust manner.

While I would have preferred an investment test to address additionality I also strongly support the 4.5% threshold as simplified indicator for additionality of cookstove activities.

Best regards,

Axel Michaelowa
Senior Founding Partner
