Regional climate change aspects
Key findings from the 2021 IPCC climate report

Valérie Masson-Delmotte
Panmao Zhai
Climate change is already affecting every inhabited region across the globe, with human influence contributing to many observed changes in weather and climate extremes.
Multiple climatic impact-drivers will change in all regions of the world.

- Heat & cold
- Rain & drought
- Wind
- Snow
- Other
- Coastal & oceanic
- Open ocean

*Figure SPM.9*
Changes in several climatic impact-drivers would be more widespread at 2°C compared to 1.5°C global warming and even more widespread and/or pronounced for higher warming levels.
Multiple lines of evidence are distilled for the co-production of user-relevant regional climate information framed by context and values.
Thank you
