# Equity matters for adaptation: Is adaptation to climate change gender neutral?

# A case study from northern Mali

Djoudi H. (CIFOR-ICRAF), Brockhaus M. (University of Helsinki )

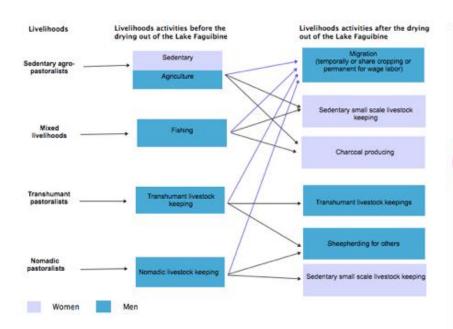

# How is climate change affecting women's vulnerabilities?

- Increased men migration Shifting work loads -> Shifting vulnerabilities (Figure 1)
- 2. Women's limited access to and control over resources will be exaggerated by climate change induced resource scarcity
- 3. Lack of women's participation in decision making processes at all levels limits women's adaptive capacity

**Figure 1**: Shifting livelihoods and the resulting gendered repartition of activities after the drying out of Lake Faguibine

## **Is Adaptation Gender neutral?**

- 1. Adaptive strategies are highly gendered: Migration as an important strategy for men but not for women (Figure 2). Women ranked migration as a factor increasing their vulnerability
- 2. Women are affected by the climate related events, but also have to adapt to the migration of men.

### Conclusion

Ignoring the already existing high women's vulnerability, their specific perceptions and visions in national and local projects and plans, will hinder a successful, transformative societal adaptation.
