RE: Input to SB005 2022 Annotated Agenda and Related Annexes

Dear Supervisory Body:

Thank you for your continuing efforts to ensure that the UNFCCC considers carbon dioxide removal (CDR) as an essential component for a just energy transition and to limit warming to 1.5 °C. Carboniferous appreciates your invitation to respond to the call for input that you issued. Specifically, we would like to share some thoughts here in response to the Information Note entitled "Removal activities under the Article 6.4 mechanism" [A6.4-SB005-AA-A09](#) version 0.40).

Please make the language around carbon dioxide removal technology agnostic while still valuing greater than 200 year permanence.

We would be pleased to discuss this further with the Supervisory Body, and very much appreciate your continuing work to achieve a safe, just, and equitable climate future, as well as the opportunity to submit this input for your consideration.

Sincerely,

D. Felker
