Technical Workshop on Climate Finance in the Association of Southeast Asian Nations (ASEAN)

29<sup>th</sup>— 30<sup>th</sup> October 2019

# **Strengthening National Capacities to Access Climate Finance**

Strategizing Public Bilateral Finance in the post-2020 Paris Regime

#### Koji Fukuda

**Chief Advisor** 

Japan International Cooperation Agency (JICA)

TA for Capacity Development to Accelerate Low Carbon and Resilient Society
Realization in the Southeast Asia Region

in collaboration with Thailand Greenhouse Gas Management Organization(TGO)

fukuda.advisor@gmail.com

#### 1. Recap and the Observed Gap

- Asia remains to be the principal recipient region of public climate finance flows (UNFCCC 2019)
- Among the multiple sources, significant portion of public climate finance is channeled bilaterally through existing institutions and instruments

	Annual average USD billion	Adaptation	Area of Mitigation	support REDD-plus <sup>a</sup>	Cross-cutting	Fi Grants	nancial instrume Concessional Ioans	other
Multilateral climate funds <sup>b</sup>	1.9	25%	53%	5%	17%	51%	44%	5%
Bilateral climate finance	31.7	29%	50%	-	21%	47%	52%	<1%
MDB climate finance <sup>d</sup>	24.4	21%	79%	-	=.	9%	74%	17%

**UNFCCC 2018** 

 Yet, there are <u>observed gaps among the resource needs, available</u> <u>resources, and the actual access attained</u> to meet specific climate objectives

#### 2. Understanding the Access (1)

- Access mostly discussed in the multilateral context, but holistic approach to access to finance (incl. bilateral) is important to maximize resource acquisition
- 2. Multiple aspects of access to public climate finance

**Unilateral Bilateral** Access to Catalyzing Other Access to public access to emerging domestic bilateral other types of opportunities public finance finance finance for access (e.g. GCF, PF) itself

 Access is not only the matter of volume/sources – but entails qualitative considerations (e.g. planning capacity, proposal writing skills)

#### 2. Understanding the Access (2)

 Despite country-specific nature of access, there are Common Enablers for enhancing access to public bilateral finance

# Planning Capacity

- 1. Self-assessment & robust understanding of
  - demand (own priority needs)
  - supply (support landscape, players, instruments)
     shared among domestic stakeholders
- 2. Strategic selection of **instrument** to fit with specific demand
- 3. Strategic selection of partners

Proposal Formulation Skill 4. <u>Preparations for robust proposal documents</u> and follow up in line with domestic approval process & DP's procedures

## 2. Understanding the Access (3) Specifying Demand & Supply

- Demand Side
- What are the PRIORITY finance and capacity needs?
- Sufficient data/evidences?
- Which part of the resource needs require access to public bilateral finance? (demarcation)
- What are <u>the domestic</u> regulations & due procedures?

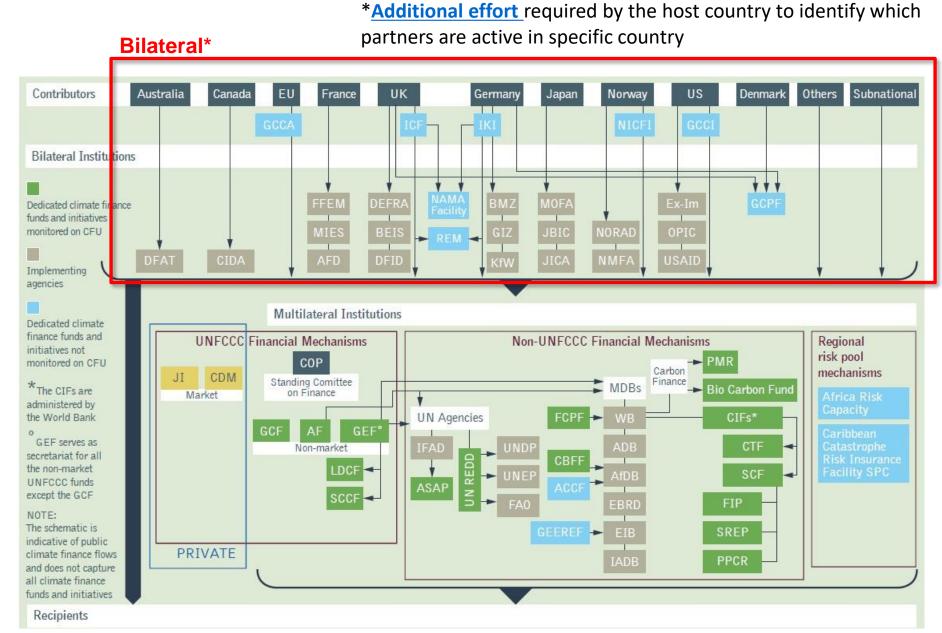

- ✓ Who's needs? (shared priority by F/P, LMs, implementing agencies?)
- ✓ What/which specific country experiences, systems or technology to learn more from/adopt?

# Supply Side

- What are the existing, key bilateral support available?
- Who are the **major bilateral players** in your country/region?
- What are their respective comparative advantages?
- What are the bilateral players' due procedures to enable access?
- Other requirements?

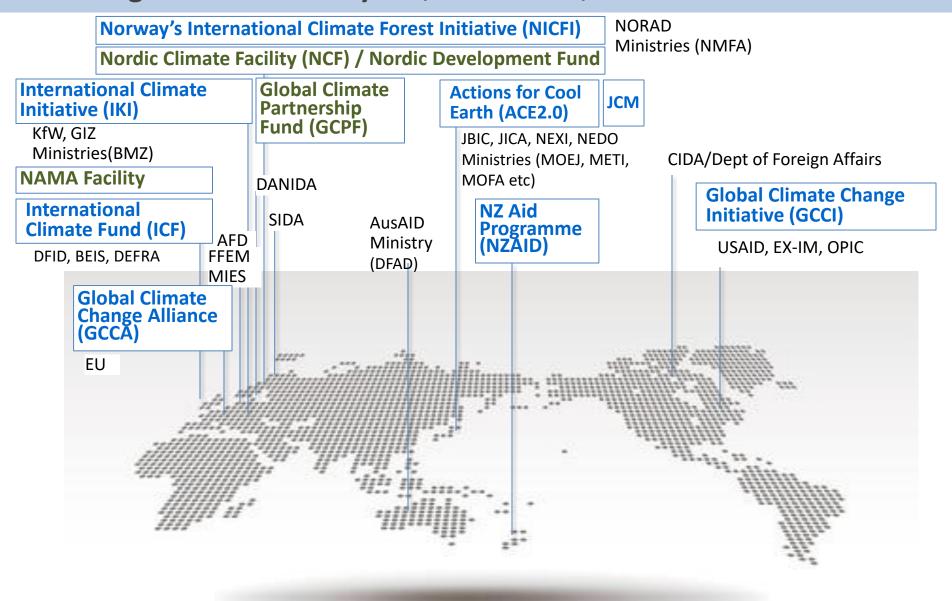

- ✓ Underlined focus of climate support strategies, country support programmes
- ✓ Available instruments

#### 4. Existing Initiatives & Players (non-exhaustive)

Source: ODI and HBF 2019

#### 4. Existing Initiatives & Players (non-exhaustive)

#### 4. Key Instruments

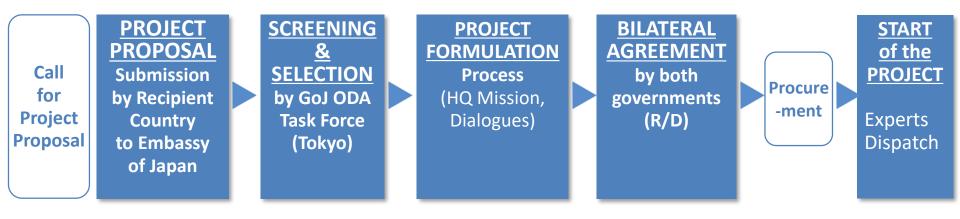

- Optimum mix differ according to country-specific conditions and economic development stage
- ➤ **Grant/TA** for national/sectoral PAMs, pilots, capacity building, but with differentiated access opportunities for LDCs and MICs
- ➤ Concessional Lending for e.g. climate-proof infrastructure projects, but with careful balance with country's absorptive capacity and debt ceiling
- ➤ Guarantee & Equity Investment to leverage private projects (e.g. RE/energy conservation/new tech)

Gradual shift of public financial institutions towards green/climate investment in line with environmental, social and governance (ESG) investment (incl. climate-related financial disclosure) movement

#### 4. Due Procedural Requirements (e.g. Grant/TA)

- Defined Annual Cycle for Project Formulation/Planning
- Access to Bilateral Finance is governed by
   (1) ODA procedures of DPs; and
  - (2) Domestic Regulations of the Host Country
- Steps, formats, internal endorsements to be followed before the proposal package arrives at the respective Embassy
- Host Country have the Designated Institution handling Bilateral Cooperation matters (e.g. Bilateral Dept of Ministries, Cooperation Agency)
  - Expectation Management
  - Early actions/planning required to factor in the lead-time, and putting the documents into the formal procedure

#### 5. Other Opportunities for "Access"

- South-south cooperation as the new mode of bilateral cooperation to supplement conventional north-south bilateral support provided by OECD community
- how to factor in those opportunities?
- Increasing demand for harnessing domestic public resources

National Climate Fund

#### Asia (examples)

Bangladesh Climate Resilient Fund

**Cambodia Climate Change Alliance TF** 

Indonesia Climate Change TF /

**Environmental Fund** 

**Philippines People's Survival Fund** 

Maldives Climate Change Trust Fund

Sectoral Funds Credit Line by
Domestic Financial
Institutions

#### E.g.

- Environmental protection fund
- Energy conservation fund
- RF fund
- SME fund

- > Are those domestic funds readily accessible by those who need?
- Resource allocation/earmarking for climate purposes?
- Rooms for improvements? (e.g. regulatory reform, allocations, etc)

## 6. Preliminary Observations for CB for Proposal Writing Skills

- Various capacity building/training opportunities available to AMS to develop proposal writing skills at regional & country level
  - UNFCCC WS, CF Ready, TGO/CITC write-shop, AIT/RRC.AP, etc etc
- CB mainly focusing on access to GCF, but the skills are replicable regardless of financial sources/funds;
  - e.g. investment criteria, scalability, differences from development projects

#### National F/P, NDA

LMs, Implementing Agencies/AE

National consultants,
Other supporting
stakeholders

To further build <u>national</u> capacity to access,

- Who should nurture proposal writing skills in the country?
- Who should engage in CB opportunities?
- What is the best approach for participant selection?
  - appointment/nomination based?
  - open call for proposals?

### 6. Final thoughts..

- Public climate finance (bilateral) has a room to play in the post-2020 Paris Agreement implementation phase, although its role might change over time in rapidly growing Asia (e.g. catalytic role)
- Continuous effort to address common enablers increases the chances for access
- Concerted, continuous effort required to enhance planning capacity, and sound proposal development skill
- In view of regional diversity, tiered approach for accessing public climate finance according to different stages of economic development might be useful
- Capturing south-south cooperation and strategizing domestic public finance offers additional access opportunities
- Maximizing peer-to-peer experience sharing to expedite learning
   & implementation (e.g. how to effectively engage PS)

Thank you!
