Senior scientist

Chemical Oceanographer at GEOMAR Helmholtz Centre for Ocean Research Kiel, in Germany

I am a chemical oceanographer working focusing on ocean ventilation by observing transient tracers and conducting deliberate tracer release experiments to understand ventilation and mixing in the ocean. I also work on understanding the dynamics of ocean carbon, nutrients and oxygen.

In addition, I am co-chairing the steering committee of the Global Ocean Observing System (GOOS) and coordinating the EU funded project EuroSea, that aims at improving the ocean observing and forecasting system.
