

Under the framework of West African Alliance on Carbon Market and Climate Finance (the Alliance), the UNFCCC-BOAD Regional Collaboration Centre (RCC) in Lome has supported Togo Ministry of Environment and Forest Resources to deliver a technical training workshop for the committee members responsible for monitoring the Nationally Determined Contribution (NDC) implementation. The two-day workshop brought together forty (40) participants who are involved in the implementation and monitoring of the NDC implementation in Togo. It provided an opportunity to strengthen the capacity of the committee members and other relevant actors to prepare the MRV infrastructure for the implementation of Article 6 of the Paris Agreement, especially Article 6.2 and 6.4. Participants reviewed the existing practices and discussed various issues relating to the establishment of an effective and efficient national MRV system for the various sectors in Togo that have a potential to participate in the mechanism set up under Article 6.

Under the Alliance support programme, Togo and Nigeria have been selected to implement a series of pilot actions in preparation for the implementation of article 6.
