

FUTURES LABS @ COP26

Bold ideas for systems change to accelerate the transition to a regenerative, just world

Transformational Economics Meets Transformational Leadership

Organised by the following partners: Club of Rome, Volans, SistemaB

<p>Vision Statement</p>	<p><i>What are the visions for the future you want to explore?</i> A sustainable net-zero future within planetary boundaries, where net-zero does not just stand for climate neutrality, but also zero biodiversity loss, zero poverty and zero pandemics. A future in which people, planet and prosperity are balanced. Our current economic system is not set up to match these visions and radical shifts in economic thinking and leadership are needed. A future in which new economic approaches are structured to create a balance between economic, environmental and social indicators to ensure equity. A future in which success or prosperity is no longer measured in terms of GDP growth.</p>
<p>Challenges</p>	<p><i>What challenges are you experimenting with to get there?</i> A systemic transformation across our economies and financial systems as well as a sectoral and technology revolution. Redefining value and prosperity - requiring letting go of traditional, dominant economic models based on progress measured by GDP and finding a unifying framework to serve future generations</p>
