

# UNDP's Climate Promise

2025

# The stakes could not be higher

---

The world continues to shatter global temperature records.

2023 was the hottest year ever recorded and climate impacts are becoming more widespread and devastating – intertwined with evolving crises on nature, food, fuel and finance.

The world must take rapid, sustained, and large-scale action to limit global warming, or 1.5oC will be beyond reach.

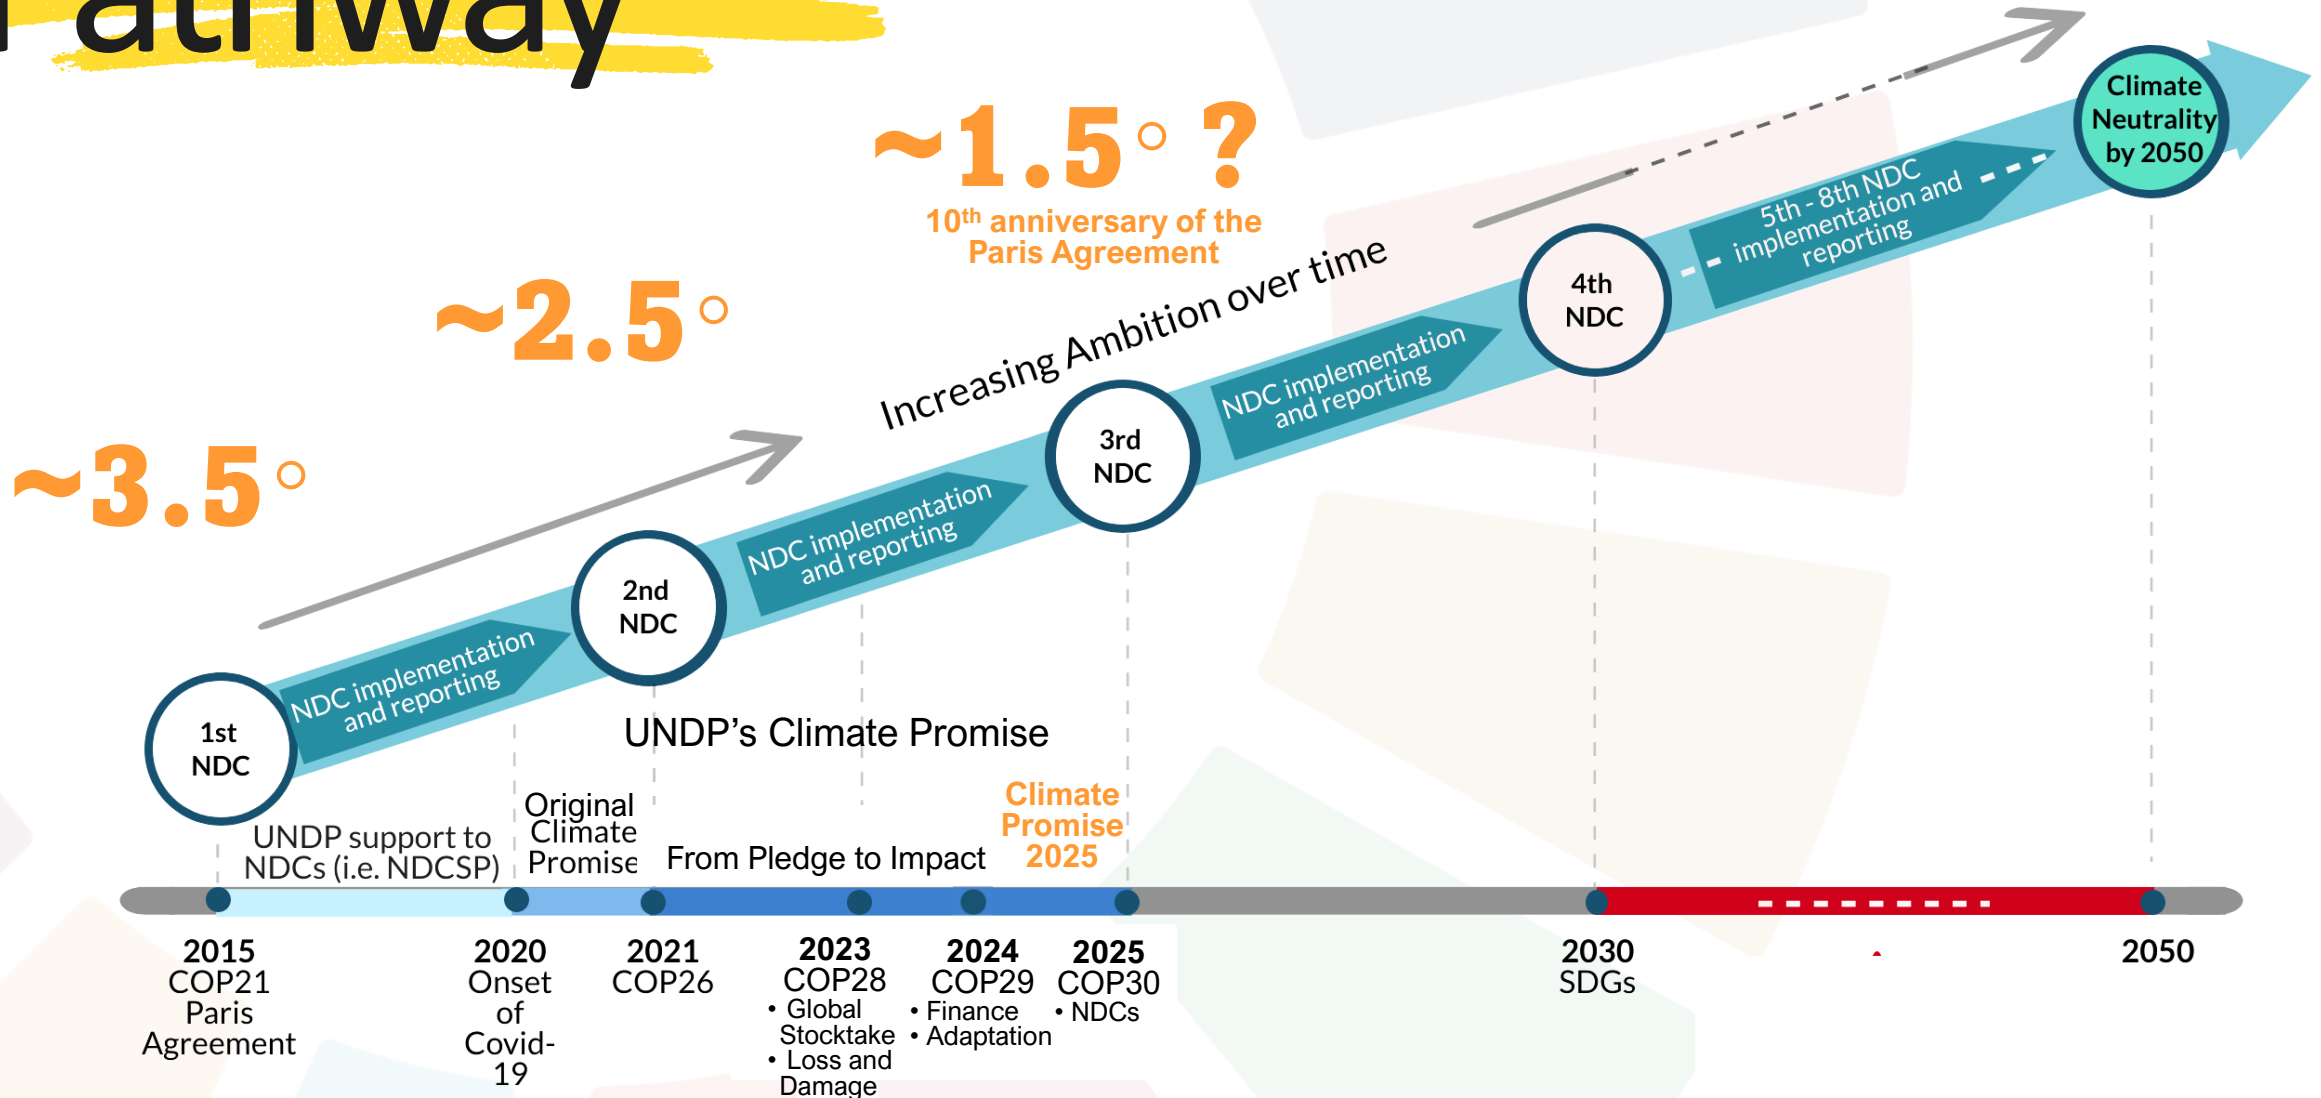

“

The world cannot afford delays, indecision, or half measures.

– UN Secretary-General

”

# Paris Agreement Pathway

# Aim of Climate Promise 2025

Connect global goals with action on the ground to scale-up ambition and implementation

Goal: Support developing countries to align the 3rd generation of NDCs to the 1.5° C goal and SDGs, strengthen quality and investability, and accelerate implementation to drive sustainable development.

# Service Offer

Ambition and implementation are intertwined, and all require inclusive processes to leave no one behind

## Ambition

- Assessment of NDC progress, align with Net Zero and SDGs
- Build political will and societal ownership
- Strengthen targets, policies, and measures (sectoral)
- Align with existing frameworks – NAP, NBSAP, energy compacts, etc.
- Assess costs and investment opportunities

## Acceleration

- Drive finance to deliver targets
  - Int'l public: align VF, multilat and bilat
  - Nat'l public: INFFs, bonds, CPEIRs
  - Private: Carbon Markets (HICM offer), private sector coalition
- Integrated technical support on priority areas: Adaptation, Energy, L&D, Nature

## Inclusivity

- Recognize and promote a human rights-based approach
- Advance gender equality
- Strengthen effective participation and leadership
- Increase capacities and knowledge to drive implementation
- Strengthen access to and control over resources, e.g. finance, information, and technology

# Current Climate Promise Support in the Region

**9**  
Countries

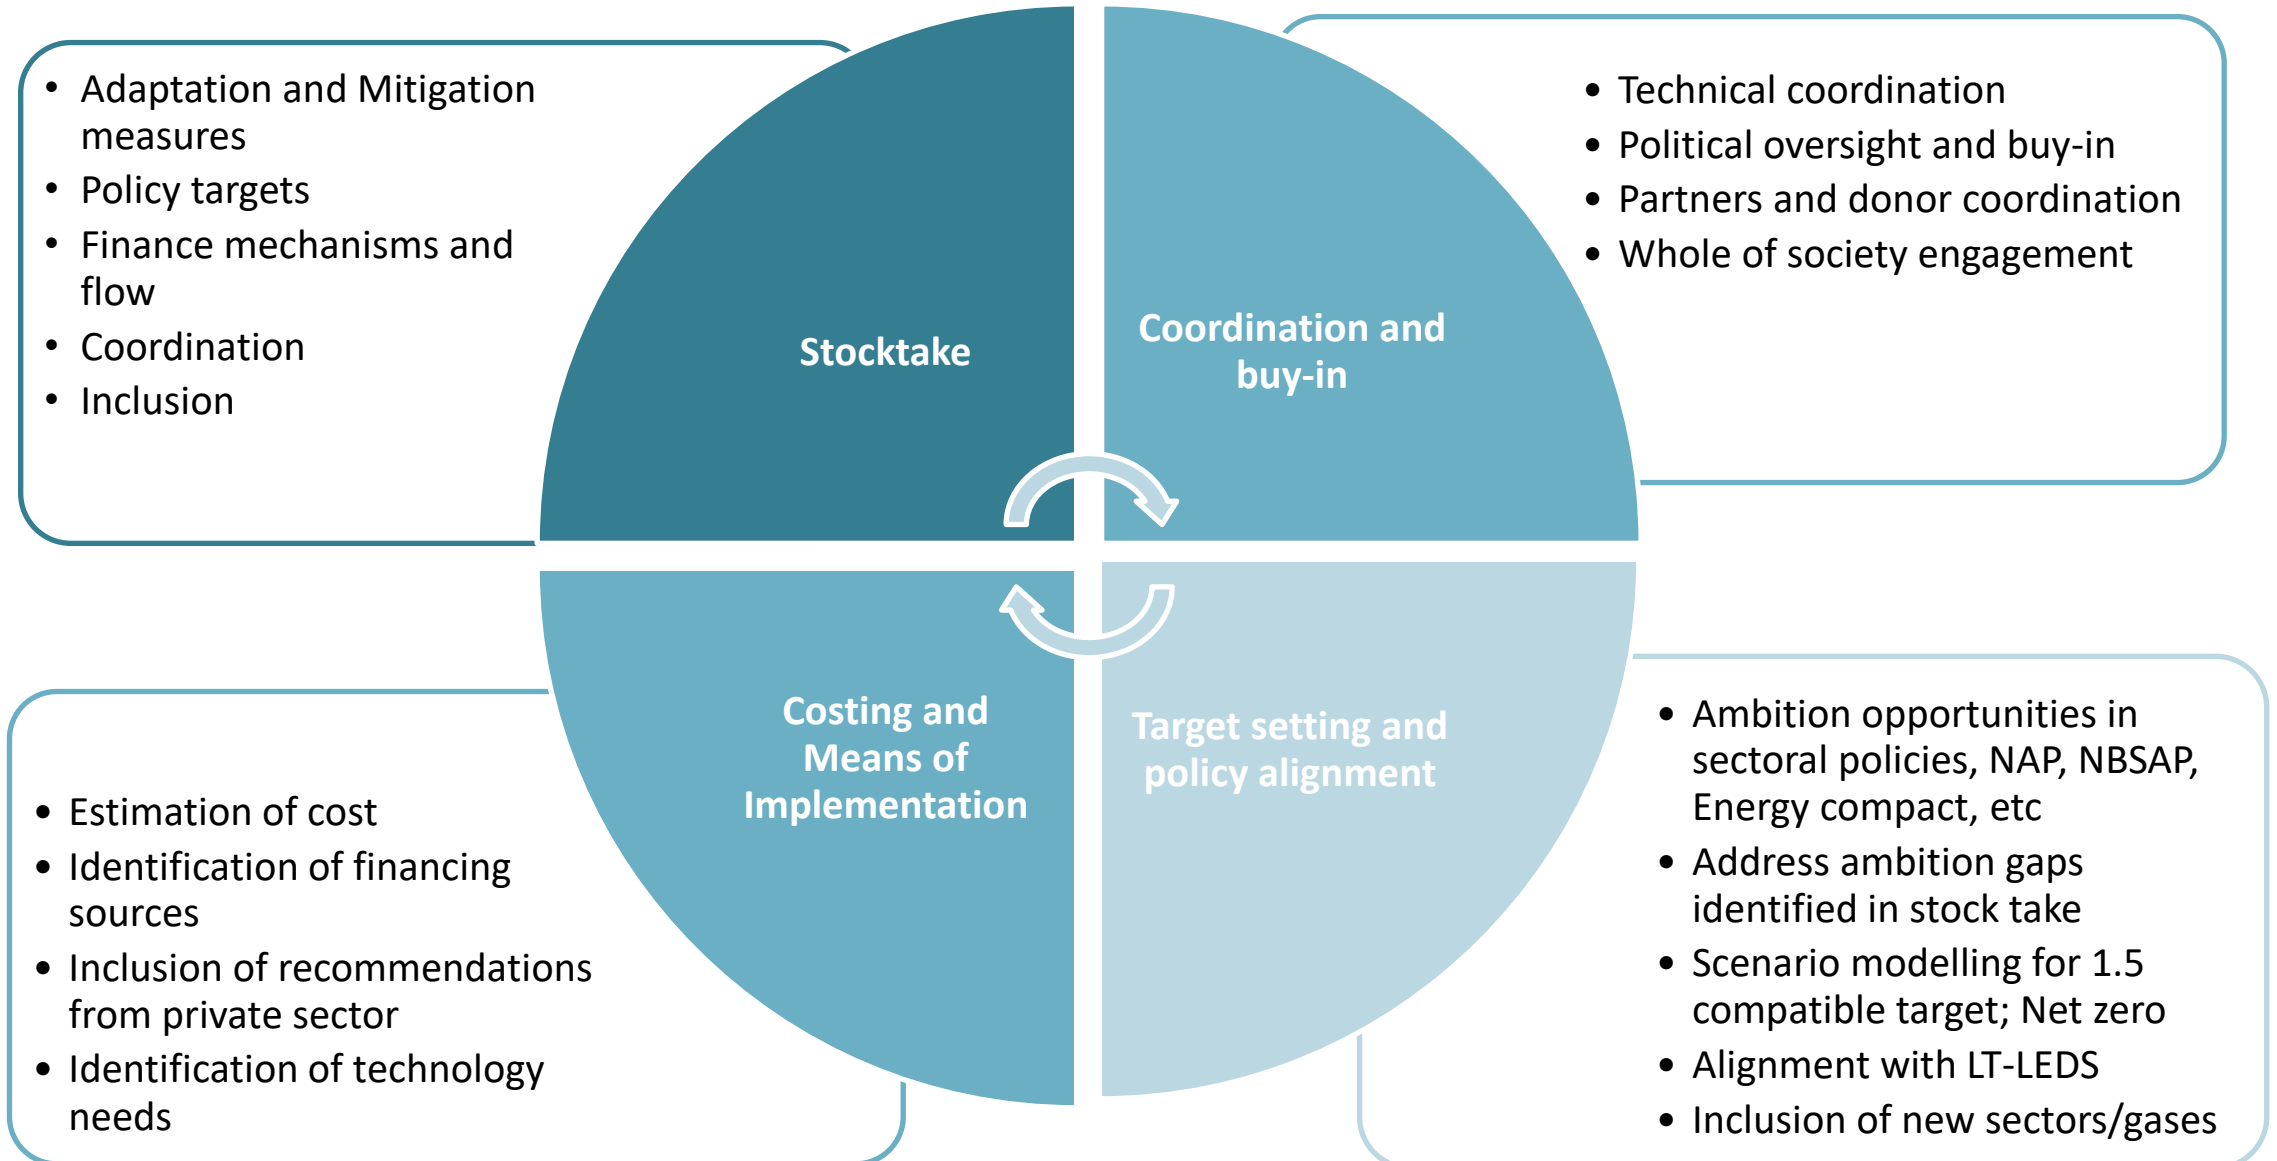

**Egypt; Tunisia; Morocco  
Somalia; Sudan; Jordan  
Iraq; Lebanon; Palestine**

**UNDP support BRT  
Lebanon; Morocco;  
Tunisia; Egypt; Jordan;  
Algeria**

## Area of support:

- **In Sudan**, the enhanced NDC has a core focus on build climate resilience in agriculture, water sectors by scaling up climate adaptation and accelerating low carbon solutions. Key focus for UNDP implementation support is on scaling up energy access for poor and avoiding loss and damage through adaptive capacities
- **In Tunisia**, UNDP support resulted in design of new NDC targets to accelerate a rapid shift towards a low-carbon future generating social and gender co-benefits. UNDP implementation support focused on low carbon cities
- **In Jordan**, UNDP helped raise the mitigation and adaptation targets considering new technology and integrating gender equality, circular economy models and green recovery pathways. Implementation support focused on nature based solutions for resilience of critical ecosystems and communities.

# Areas of support for NDC Enhancement

# Sequence of Support

## Initial support – Starting in April 2024

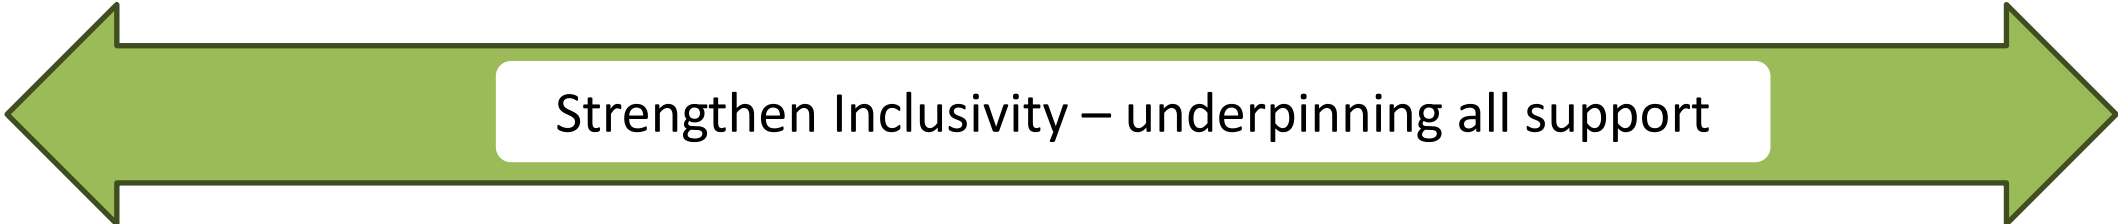

- National Stock Take

## Additional support – From June 2024

- Coordination
- Enhancement
- Costing and Means of Implementation

Acceleration of NDC  
implementation -  
Ongoing

Strengthen Inclusivity – underpinning all support

Looking forward to working together to  
support countries to develop and deliver  
bold climate action!
