

Report of the technical assessment of the proposed forest reference emission level of Côte d'Ivoire submitted in 2017

Corrigendum

1. Page 1, summary

(a) *For* corresponds to 78,009,357 tonnes of carbon dioxide equivalent per year
substitute corresponds to 91,470,627.7 tonnes of carbon dioxide equivalent per year

(b) *For* the FREL was modified to 38,052,641 t CO₂ eq/year *substitute* the FREL
was modified to 30,910,119.16 t CO₂ eq/year

(c) *For* removals of 3,351,065 t CO₂ eq/year *substitute* removals of
10,493,586.20 t CO₂ eq/year

2. Paragraph 10

For the existing paragraph 10 *substitute*

10. The annual calculated net emission values (difference between emissions and removals) during the reference period vary between 41,155,937.57 t CO₂ eq for 2000–2001 and 20,569,766.02 t CO₂ eq for 2014–2015.¹¹ The modified FREL calculated as the annual average of these values corresponds to 30,910,119.16 t CO₂ eq/year. Côte d'Ivoire did not apply an adjustment to its modified FREL.

3. Annex, table, first row, second column

For 41,155,937.57 in 2000–2001 to 20,569,766.02 in 2014–2015^e *substitute* 30,910,119.16
