الاتفاقية الإطارية بشأن تغير المناخ

مؤتمر الأطراف

تقرير مؤتمر الأطراف عن دورته الحادية عشرة، المعقودة في مونتريال في الفترة من ٢٨ تشرين الناني/نوفمبر إلى ١٠ كانون الأول/ديسمبر ٢٠٠٥

إضاف__ة

الجزء الثانى: الإجراءات التي اتخذها مؤتمر الأطراف في دورته الحادية عشرة

المحتويات

المقررات التي اعتمدها مؤتمر الأطراف

الصفحة الصفحة المقرر ١١٥ مداول نموذج الإبلاغ الموحد لفئات استخدام الأراضي وتغيير استخدام الأراضي والحراجة الأراضي والحراجة الأراضي والحراجة القضايا المتعلقة بمنهجيات التعديل بموجب الفقرة ٢ من المادة ٥ من بروتوكول كيوتو ٢٣

المقرر ١٤/م أ-١١

جداول نموذج الإبلاغ الموحد لفئات استخدام الأراضي وتغيير استخدام الأراضي والحراجة

إن مؤتمر الأطراف،

إذ يشير إلى الفقرة ١ من المادة ٤، والفقرة ٢ من المادة ١٠، والفقرة ١ من المادة ١٢ من الاتفاقية، وإذ يشير أيضاً إلى مقرريه ١٨/م أ-٨ و١٣/م أ-٩،

- ١ يعـــتما جـــداول نموذج الإبلاغ الموحد وملاحظاتها الواردة في المرفق بهذا المقرر، بغرض تقديم معلومات عن قوائم الجرد السنوية بشأن استخدام الأراضي وتغيير استخدام الأراضي والحراجة؟
- ٢- يقرر أن يستخدم كل طرف من الأطراف المدرجة في المرفق الأول بالاتفاقية هذه الجداول بغرض تقديم قوائم الجرد السنوية المستحقة في عام ٢٠٠٧ وما بعده؟
- -7 يطلب إلى الأمانة أن تدرج هذه الجداول وملاحظاها والتعديلات التقنية الناتجة عن المقرر 17 م أ- 9 في "المبادئ التوجيهية لإعداد البلاغات الوطنية المقدمة من الأطراف المدرجة في المرفق الأول بالاتفاقية، الجزء الأول: المبادئ التوجيهية لاتفاقية الأمم المتحدة الإطارية بشأن تغير المناخ فيما يتعلق بقوائم الجرد السنوية" التي اعتُمدت بموجب المقرر 11 م أ- 11 وأن تعد قبل الدورة الخامسة والعشرين للهيئة الفرعية للمشورة العلمية والتكنولوجية (تشرين الثاني/نوفمبر 11 وثيقة وحيدة تتضمن مبادئ توجيهية محدَّثة للاتفاقية الإطارية بشأن الإبلاغ عن قوائم الجرد السنوية.

المرفق

جداول نموذج الإبلاغ الموحد وملاحظاتما ملاحظات على نموذج الإبلاغ الموحد

1- يشكل نموذج الإبلاغ الموحد جزءاً لا يتجزأ من التقرير المقدم عن قوائم الجرد الوطنية. وهو مصمم لضمان قيام الأطراف المدرجة في المرفق الأول بالاتفاقية بالإبلاغ عن بيانات كمية في نموذج موحد، ولتيسير المقارنة بين بيانات قوائم الجرد التي تقدمها الأطراف المدرجة في المرفق الأول. وينبغي ذكر التفاصيل المتعلقة بأية معلومات ذات طابع غير كمي في تقارير الجرد الوطنية.

٢- والهـــدف من المعلومات المقدمة في نموذج الإبلاغ الموحد هو زيادة القدرة على المقارنة بين قوائم الجرد وزيادة شفافية هـــذه القوائم عن طريق تيسير جملة أمور من بينها بيانات الأنشطة والمقارنات بين عوامل الانبعاثات الضمنية أو عوامــل تغــير مخزون الكربون فيما بين الأطراف المدرجة في المرفق الأول، وسهولة تحديد الأخطاء وحالات سوء الفهم وحالات الإغفال المحتملة في قوائم الجرد.

٣- وكما ذكر في هذه المبادئ التوجيهية المتعلقة بالإبلاغ^(١)، يتألف نموذج الإبلاغ الموحد من جداول للإبلاغ الموجز والإبلاغ القطاعي، مستمدة من المبادئ التوجيهية المنقحة لعام ١٩٩٦ المتعلقة بقوائم جرد غازات الدفيئة التي اعتمدها الفريق الحكومي الدولي) بالإضافة إلى جداول البيانات الأساسية القطاعية التي أعدت حديثاً و جداول أخرى متسقة مع المبادئ التوجيهية للفريق الحكومي الدولي وإرشادات الممارسات الجيدة للفريق الحكومي الدولي، وإدارة حالات عدم اليقين في قوائم الجرد الوطنية لغازات الدفيئة.

3- وبعض حداول البيانات الأساسية القطاعية يتطلب حساب عوامل الانبعاثات الضمنية أو عوامل تغير مخزون الكربون. وهذه هي النسب التنازلية بين تقدير الانبعاثات أو عمليات الإزالة وبيانات الأنشطة المجمعة، الخاصة بالطرف المستدرج في المرفق الأول. والغرض الوحيد من عوامل الانبعاثات الضمنية أو عوامل تغير مخزون الكربون هو المقارنة. فهي لن تكون بالضرورة عوامل الانبعاثات الإزالة المستخدمة فعلاً في تقدير الانبعاثات الأصلي، إلا إذا كان هذا مجرد عملية ضرب مبنية على ذات بيانات الأنشطة المجمعة والمستخدمة لحساب عامل الانبعاث الضمني أو عامل تغير مخزون الكربون.

٥- وانســجاماً مع المبادئ التوجيهية المنقحة للفريق الحكومي الدولي المعني بتغير المناخ لعام ١٩٩٦، ينبغي الإبــلاغ في الجداول المناسبة عن البنود التفسيرية، مثل تقديرات الانبعاثات من الوقود المستخدم في النقل الجوي والـبحري الدولي، وانبعاثات ثاني أكسيد الكربون من الكتلة الحيوية، والانبعاثات من العمليات المتعددة، ولكن ينبغي عدم إدراجها في المجاميع الوطنية.

(١) ستصبح الملاحظات على نموذج الإبلاغ الموحد جزءاً من "المبادئ التوجيهية لإعداد البلاغات الوطنية المقدمة من الأطراف المدرجة في المرفق الأول بالاتفاقية، الجزء الأول: المبادئ التوجيهية لاتفاقية الأمم المتحدة الإطارية بشأن تغير المناخ فيما يتعلق بالإبلاغ عن قوائم الجرد السنوية"، كما وردت في الوثيقة FCCC/SBSTA/2004/8. وأي إشارة إلى "المبادئ التوجيهية للإبلاغ" في هذه الملاحظات هي إشارة إلى تلك المبادئ التوجيهية.

٦- وينبغي للأطراف المدرجة في المرفق الأول أن تستخدم أُطُر التوثيق الواردة أسفل الجداول لتقديم إشارات مرجعية محددة إلى الفروع ذات الصلة من التقرير عن قوائم الجرد الوطنية التي ينبغي أن تقدم فيها تفاصيل كاملة عن قطاع معين/فئة معينة.

٧- وينبغي للأطراف المدرجة في المرفق الأول أن تملأ جميع الخانات الخاصة بتقديرات الانبعاثات أو عمليات الإزالة أو بيانات الأنشطة أو عوامل الانبعاثات. وينبغي استخدام رموز التفسير المبينة في الفقرة ٢٨ من المبادئ التوجيهية للإبلاغ عند عدم إدراج بيانات.

٨- ويوجد في حداول البيانات الأساسية القطاعية، أسفل الفئة "Other"، صف فارغ يبين أنه يمكن إضافة
 فئات خاصة بكل بلد. وستدرج هذه الفئات تلقائياً في حداول الإبلاغ القطاعية.

9- وينبغي للأطراف المدرجة في المرفق الأول أن تملأ البيانات في أطر المعلومات الإضافية. وعندما تكون المعلومات المطلوبة غير مناسبة بسبب الطريقة التي يستخدمها الطرف المدرج في المرفق الأول، ينبغي ملء الخانات المناظرة باستخدام المؤشر "NA" (لا تنطبق).

٠١٠ ولا ينبغي تغيير ترتيب أعمدة الجداول أو الصفوف أو الخانات أو ملاحظاتها، لأن ذلك سيؤدي إلى تعقيد عملية تجميع البيانات. وأيــة بيانــات تضاف إلى التفصيل الحالي لفئات المصادر والمصارف ينبغي إدراجها تحت حانة "Other"، عند الاقتضاء.

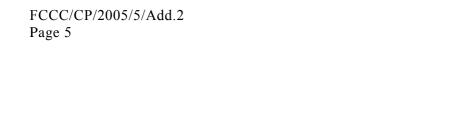

11- ولتبسيط مخطط الجداول ووضوح بيان اشتراطات الإبلاغ المحددة لكل حدول، لم تترك بيضاء إلا الخانات السي تتطلب من الأطراف المدرجة في المرفق الأول إدخال البيانات فيها. ويبين التظليل الخفيف للخانات أن من المستخدام برنامج حاسوبي توفره الأمانة. ومع ذلك، فعلى الأطراف التي تفضل عدم استخدام أي برنامج حاسوبي لتسجيل بيانات نموذج الإبلاغ الموحد أن تدرج بياناتها في تلك الخانات أيضاً.

17- وكما هي الحال في نموذج الإبلاغ الموحد الحالي، استُخدم التظليل الثقيل في الخانات التي ليس من المتوقع أن تتضمن أية معلومات.

17- أما زيادة الكربون ونقصانه فينبغي إدراجهما بصورة مستقلة في حداول البيانات الأساسية لقطاع استخدام الأراضي وتغيير استخدام الأراضي والحراجة، إلا في الحالات التي قد يتعذر فيها تقنياً، نظراً للطرائق المستخدمة، فصل المعلومات المتعلقة بالزيادة عن المعلومات المتعلقة بالنقصان.

15- وانسجاماً مع الفقرة ١٨ من المبادئ التوجيهية للإبلاغ، يتعين على كل طرف من الأطراف المدرجة في المرفق الأول بالاتفاقية أن يبلغ عن قوائم الجرد الوطنية لانبعاثات جميع غازات الدفيئة البشرية المنشأ التي لا يحكمها بروتوكول مونتريال، وذلك بحسب مصادرها وعمليات إزالتها بواسطة المصارف.

٥١ - ووفقاً للمبادئ التوحيهية المنقحة للفريق الحكومي الدولي المعني بتغير المناخ لعام ١٩٩٦، ولأغراض الإبلاغ، تكون دائماً علامة عمليات الإزالة علامة سالبة (-)، وعلامة الانبعاث علامة موجبة (+). وتحوَّل التغيرات الصافية في خرونات الكربون إلى ثاني أكسيد الكربون بضرب الكربون C في ٢/٤٤، وبتغيير علامة عمليات الإزالة الصافية لثاني أكسيد الكربون إلى علامة موجبة (+).

Tables of the common reporting format for land use, land-use change and forestry and related tables (tables Summary 2, table 8 (a) (recalculations) and table 10 (trends))

Forest Land converted to other Land-Use Categories						
Grassland converted to other Land-Use Categories						

- (1) According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).
- (2) For each land-use category and sub-category, this table sums net CO₂ emissions and removals shown in tables 5.A to 5.F, and the CO₂, CH₄ and N₂O emissions showing in tables 5(I) to 5(V).
- (3) Parties may decide not to prepare estimates for these categories contained in appendices 3a.3 and 3a.4 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.
- (4) This land-use category is to allow the total of identified land area to match the national area.
- (5) The total for category 5.G Other includes items specified only under category 5.G in this table as well as sources and sinks specified in category 5.G in tables 5(1) to 5(V).
- (6) Parties may decide not to prepare estimates for this category contained in appendix 3a.1 of the IPCC good practice guidance for LULUCF, although they may do so if they wish and report in this row.
- ⁽⁷⁾ These items are listed for information only and will not be added to the totals, because they are already included in subcategories 5.A.2 to 5.F.2.

- Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.
- If estimates are reported under 5.G Other, use this documentation box to provide information regarding activities covered under this category and to provide reference to the section in the NIR where background information can be found.

- (1) Land categories may be further divided according to climate zone, management system, soil type, vegetation type, tree species, ecological zone or national land classification.
- (2) The total area of the subcategories, in accordance with the sub-division used, should be entered here. For lands converted to Forest Land report the cumulative area remaining in the category in the reporting year.
- (3) Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.
- (4) The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).
- (5) Implied carbon-stock-change factors for mineral soils are calculated by dividing the net C stock change estimate for mineral soil by the difference between the area and the area of organic soil.
- (6) When Parties are estimating fluxes for organic soils but cannot separate these fluxes from mineral soils, these fluxes should be reported under mineral soils.
- (7) The value reported for organic soils is estimated as a flux. For consistency with other entries in this column, these fluxes should be expressed in the unit required in this column, i.e. in Gg C.
- (8) According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+). Net changes in carbon stocks are converted to CO₂ by multiplying C by 44/12 and changing the sign for net CO₂ removals to be negative (-) and for net CO₂ emissions to be positive (+). Note that carbon stock changes in a single pool are not necessarily equal to emissions or removals, because some carbon stock changes result from carbon transfers among pools rather than exchanges with the atmosphere.
- (9) Where Parties directly estimate emissions and removals rather than carbon stock changes, they may report emissions/removals directly in this column and use notation keys in the stock change columns.
- (10) A Party may report aggregate estimates for all conversions of land to forest land when data are not available to report them separately. A Party should specify in the documentation box which types of land conversion are included. Separate estimates for grassland conversion should be provided in table 5 as an information item.

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

- (1) Land categories may be further divided according to climate zone, management system, soil type, vegetation type, tree species, ecological zone or national land classification.
- (2) The total area of the subcategories, in accordance with the sub-division used, should be entered here. For lands converted to Cropland report the cumulative area remaining in the category in the reporting year.
- (3) Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.
- (4) The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).
- (5) Implied carbon-stock-change factors for mineral soils are calculated by dividing the net C stock change estimate for mineral soil by the difference between the area and the area of organic soil.
- ⁽⁶⁾ For category 5.B.1 Cropland remaining Cropland this column only includes changes in perennial woody biomass.
- (7) No reporting on dead organic matter pools is required for category 5.B.1. Cropland remaining Cropland.
- (8) When Parties are estimating fluxes for organic soils but cannot separate these fluxes from mineral soils, these fluxes should be reported under mineral soils.
- (9) The value reported for organic soils is estimated as a flux. For consistency with other entries in this column, these fluxes should be expressed in the unit required in this column, i.e. in Gg C.
- (10) According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+). Net changes in carbon stocks are converted to CO₂ by multiplying C by 44/12 and changing the sign for net CO₂ removals to be negative (-) and for net CO₂ emissions to be positive (+). Note that carbon stock changes in a single pool are not necessarily equal to emissions or removals, because some carbon stock changes result from carbon transfers among pools rather than exchanges with the atmosphere.
- (11) Where Parties directly estimate emissions and removals rather than carbon stock changes, they may report emissions/removals directly in this column and use notation keys in the stock change columns.
- (12)A Party may report aggregate estimates for all land conversions to cropland, when data are not available to report them separately. A Party should specify in the documentation box which types of land conversion are included. Separate estimates for forest land and grassland conversion should be provided in table 5 as an information item.

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

2.5 Settlements converted to Other Land														
Land														

- (1) Land categories may be further divided according to climate zone, management system, soil type, vegetation type, tree species, ecological zone or national land classification.
- (2) The total area of the subcategories, in accordance with the sub-division used, should be entered here. For lands converted to Other Land report the cumulative area remaining in the category in the reporting year.
- (3) Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.
- (4) The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).
- (5) According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+). Net changes in carbon stocks are converted to CO₂ by multiplying C by 44/12 and changing the sign for net CO₂ removals to be negative (-) and for net CO₂ emissions to be positive (+). Note that carbon stock changes in a single pool are not necessarily equal to emissions or removals, because some carbon stock changes result from carbon transfers among pools rather than exchanges with the atmosphere.
- (6) Where Parties directly estimate emissions and removals rather than carbon stock changes, they may report emissions/removals directly in this column and use notation keys in the stock change columns.
- (7) This land-use category is to allow the total of identified land area to match the national area.
- (8) A Party may report aggregate estimates for all land conversions to other land, when data are not available to report them separately. A Party should specify in the documentation box which types of land conversion are included. Separate estimates for forest land and grassland conversion should be provided in table 5 as an information item.

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

TABLE 5 (I) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY Direct N₂O emissions from N fertilization⁽¹⁾ of Forest Land and Other (Sheet 1 of 1)

Year Submission Country

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMISSION FACTORS	EMISSIONS (4)
Land-Use Category (2)	Total amount of fertilizer applied (Gg N/yr)	$ m N_2O$ -N emissions per unit of fertilizer $ m (kg~N_2O$ -N/kg N) $^{(3)}$	N ₂ O (Gg)
Total for all Land Use Categories			
A. Forest Land (5) (6)			
1. Forest Land remaining Forest Land			
2. Land converted to Forest Land			
G. Other (please specify)			

⁽¹⁾ Direct N₂O emissions from fertilization are estimated using equations 3.2.17 and 3.2.18 of the IPCC good practice guidance for LULUCF based on the amounts of fertilizers applied to forest land.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this

 $^{^{(2)}}$ N₂O emissions from N fertilization of cropland and grassland are reported in the Agriculture sector; therefore only Forest land is included in this table. $^{(3)}$ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁴⁾ Emissions are reported with a positive sign.

⁽⁵⁾ If a Party is not able to separate the fertilizer applied to forest land from that applied to agriculture, it may report all N₂O emissions from fertilization in the Agriculture sector. This should be explicitly indicated in the documentation box.

⁽⁶⁾ A Party may report aggregate estimates for all N fertilization on forest land in the category Forest Land remaining Forest Land when data are not available to report Forest Land remaining Forest Land and Land converted to Forest Land separately.

Non-CO₂ emissions from drainage of soils and wetlands⁽¹⁾ (Sheet 1 of 1)

Submission Country

GREENHOUSE GAS SOURCE AN	D SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMIS	SION FACTORS	EMISSIONS (5)		
		Area	N ₂ O-N per area ⁽⁴⁾	CH ₄ per area	N ₂ O	CH ₄	
Land-Use Category (2)	Sub-division (3)	(kha)	(kg N ₂ O-N/ha)	(kg CH ₄ /ha)	(0	Gg)	
Total all Land-Use Categories							
A. Forest Land (6)							
Organic Soil							
Mineral Soil							
D. W41 1-							
D. Wetlands							
Peatland (7)							
Flooded Lands (7)							
G. Other (please specify)							

⁽¹⁾ Parties may decide not to prepare estimates for these categories contained in appendices 3a.2 and 3a.3 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

⁽²⁾ N₂O emissions from drained cropland and grassland soils are covered in the Agriculture tables of the CRF under Cultivation of Histosols.

⁽³⁾ A Party should report further disaggregations of drained soils corresponding to the methods used. Tier 1 disaggregates soils into "nutrient rich" and "nutrient poor" areas, whereas higher-tier methods can further disaggregate into different peatland types, soil fertility or tree species.

⁽⁴⁾ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁵⁾ Emissions are reported with a positive sign.

⁽⁶⁾ In table 5, these emissions will be added to 5.A.1 Forest Land remaining Forest Land.

⁽⁷⁾ In table 5, these emissions will be added to 5.D.2 Land converted to Wetlands.

TABLE 5 (III) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

 N_2O emissions from disturbance associated with land-use conversion to cropland $^{(1)}$ (Sheet 1 of 1)

Year Submission Country

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMISSION FACTORS	EMISSIONS (4)
Land-Use Category ⁽²⁾	Land area converted (kha)	N ₂ O-N emissions per area converted ⁽³⁾ (kg N ₂ O-N/ha)	N ₂ O (Gg)
Total all Land-Use Categories (5)

Organic Soils			
Mineral Soils			
2.1 Forest Land converted to Cropland			
Organic Soils			
Mineral Soils			
2.2 Grassland converted to Cropland			
Organic Soils			
Mineral Soils			
2.3 Wetlands converted to Cropland (7)			
Organic Soils			
Mineral Soils			
2.5 Other Land converted to Cropland			
Organic Soils			
Mineral Soils			
G. Other (please specify)			

 $^{^{(1)}}$ Methodologies for N_2O emissions from disturbance associated with land-use conversion are based on equations 3.3.14 and 3.3.15 of the IPCC good practice guidance for LULUCF. N_2O emissions from fertilization in the preceding land use and new land use should not be reported.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF Sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

⁽²⁾ According to the IPCC good practice guidance for LULUCF, N₂O emissions from disturbance of soils are only relevant for land conversions to cropland. N₂O emissions from Cropland remaining Cropland are included in the Agriculture sector of the good practice guidance. The good practice guidance provides methodologies only for mineral soils.

⁽³⁾ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁴⁾ Emissions are reported with a positive sign.

⁽⁵⁾ Parties can separate between organic and mineral soils, if they have data available.

⁽⁶⁾ If activity data cannot be disaggregated to all initial land uses, Parties may report some initial land uses aggregated under Other Land converted to Cropland (indicate in the documentation box what this category includes).

⁽⁷⁾ Parties should avoid double counting with N2O emissions from drainage and from cultivation of organic soils reported in Agriculture under Cultivation of Histosols.

TABLE 5 (IV) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY CO_2 emissions from agricultural lime application⁽¹⁾ (Sheet 1 of 1)

Year Submission Country

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMISSION FACTORS	EMISSIONS (3)
Land-Use Category	Total amount of lime applied	CO ₂ -C per unit of lime ⁽²⁾	CO ₂
Zama esc category	(Mg/yr)	(Mg CO ₂ -C/Mg)	(Gg)

Dolomite CaMg(CO ₃) ₂			
C. Grassland (6)(8)			
Limestone CaCO ₃			
Dolomite CaMg(CO ₃) ₂			
G. Other (please specify) (6)(9)			

⁽¹⁾ CO₂ emissions from agricultural lime application are addressed in equations 3.3.6 and 3.4.11 of the IPCC good practice guidance for LULUCF.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

⁽²⁾ The implied emission factor is expressed in unit of carbon to faciliate comparison with published emission factors.

⁽³⁾ Emissions are reported with a positive sign.

⁽⁴⁾ If Parties are not able to separate liming application for different land-use categories, they should include liming for all land-use categories in the category 5.G Other.

⁽⁵⁾ Parties that are able to provide data for lime application to forest land should provide this information under 5.G Other and specify in the documentation box that forest land application is included in this category.

⁽⁶⁾ A Party may report aggregate estimates for total lime applications when data are not available for limestone and dolomite.

⁽⁷⁾ In table 5, these CO₂ emissions will be added to 5.B.1 Cropland remaining Cropland.

⁽⁸⁾ In table 5, these CO₂ emissions will be added to 5.C.1 Grassland remaining Grassland.

⁽⁹⁾ If a Party has data broken down to limestone and dolomite at national level, it can report these data under 5.G Other.

TABLE 5 (V) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY Biomass Burning ⁽¹⁾ (Sheet 1 of 1)

Year Submission Country

Controlled Burning					
Wildfires					
2.1. Forest Land converted to Wetlands					
Controlled Burning					
Wildfires					
E. Settlements (8)					
F. Other Land ⁽⁹⁾					
G. Other (please specify)					

⁽¹⁾ Methodological guidance on burning can be found in sections 3.2.1.4 and 3.4.1.3 of the IPCC good practice guidance for LULUCF.

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

⁽²⁾ Parties should report both controlled/prescribed burning and wildfires emissions, where appropriate, in a separate manner.

⁽³⁾ For each category activity data should be selected between area burned or biomass burned. Units for area will be ha and for biomass burned kg dm. The implied emission factor will refer to the selected activity data with an automatic change in the units.

⁽⁴⁾ If CO₂ emissions from biomass burning are not already included in tables 5.A - 5.F, they should be reported here. This should be clearly documented in the documentation box and in the NIR. Double counting should be avoided. Parties that include all carbon stock changes in the carbon stock tables (5.A, 5.B, 5.C, 5.D, 5.E and 5.F), should report IE (included elsewhere) in this column.

⁽⁵⁾ Emissions are reported with a positive sign.

⁽⁶⁾ In-situ above-ground woody biomass burning is reported here. Agricultural residue burning is reported in the Agriculture sector.

⁽⁷⁾ Includes only emissions from controlled biomass burning on grasslands outside the tropics (prescribed savanna burning is reported under the Agriculture sector).

⁽⁸⁾ Parties may decide not to prepare estimates for these categories contained in appendices 3a.2, 3a.3 and 3a.4 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.

⁽⁹⁾ This land-use category is to allow the total of identified land area to match the national area.

⁽¹⁾ For CO₂ from Land Use, Land-use Change and Forestry the net emissions/removals are to be reported. For the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).

⁽²⁾ Actual emissions should be included in the national totals. If no actual emissions were reported, potential emissions should be included.

⁽³⁾ Parties which previously reported CO₂ from soils in the Agriculture sector should note this in the NIR.

⁽⁴⁾ See footnote 8 to table Summary 1.A.

Parties should provide detailed information on recalculations in Chapter 10: Recalculations and Improvements, and in the relevant sections of Chapters 3 to 9 (see section 2.5 of each of Chapters 3 - 9) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table.

⁽¹⁾ Estimate the percentage change due to recalculation with respect to the previous submission (percentage change = 100 x [(LS-PS)/PS], where LS = latest submission and PS = previous submission. All cases of recalculation of the estimate of the source/sink category should be addressed and explained in table 8(b).

 $^{^{(2)}}$ Total emissions refer to total aggregate GHG emissions expressed in terms of CO₂ equivalent, excluding GHGs from the LULUCF sector. The impact of the recalculation on the total emissions is calculated as follows: impact of recalculation (%) = 100 x [(source (LS) - source (PS))/(total emissions (LS))], where LS = latest submission, PS = previous submission.

 $^{^{(3)}}$ Total emissions refer to total aggregate GHG emissions expressed in terms of CO₂ equivalent, including GHGs from the LULUCF sector. The impact of the recalculation on the total emissions is calculated as follows: impact of recalculation (%) = 100 x [(source (LS) - source (PS))/(total emissions (LS)], where LS = latest submission, PS = previous submission.

 $^{^{(4)}}$ Parties which previously reported CO_2 from soils in the Agriculture sector should note this in the NIR.

⁽⁵⁾ Net CO₂ emissions/removals to be reported.

TABLE 8(b) RECALCULATION - EXPLANATORY INFORMATION (Sheet 1 of 1)

Year Submission Country

⁽¹⁾ Enter the identification code of the source/sink category (e.g. 1.B.1) in the first column and the name of the category (e.g. Fugitive Emissions from Solid Fuels) in the second column of the table. Note that the source categories entered in this table should match those used in table 8(a).

Documentation box:

Parties should provide the full information on recalculations in Chapter 10: Recalculations and Improvements, and in the relevant sections of Chapters 3 to 9 (see section 2.5 of each of Chapters 3 to 9) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table. References should point particularly to the sections of the NIR in which justifications of the changes as to improvements in the accuracy, completeness and consistency of the inventory are reported.

⁽²⁾ Explain changes in methods, emission factors and activity data that have resulted in recalculation of the estimate of the source/sink as indicated in table 8(a). Include changes in the assumptions and coefficients in the Methods column.

TABLE 10 EMISSION TRENDS SUMMARY (Sheet 5 of 5)

Year Submission Country

GREENHOUSE GAS EMISSIONS	Base year ⁽¹⁾	1990	(Years 1991 to latest reported year)	Change from base to latest reported year
	CO ₂ equivalent (Gg)			(%)
CO ₂ emissions including net CO ₂ from LULUCF				
CO ₂ emissions excluding net CO ₂ from LULUCF				
CH ₄ emissions including CH ₄ from LULUCF				
CH ₄ emissions excluding CH ₄ from LULUCF				
N ₂ O emissions including N ₂ O from LULUCF				
N ₂ O emissions excluding N ₂ O from LULUCF				
HFCs				
PFCs				
SF ₆				
Total (including LULUCF)				
Total (excluding LULUCF)				

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	Base year ⁽¹⁾	1990	(Years 1991 to latest reported year)	Change from base to latest reported year
	CO ₂ equivalent (Gg)			(%)
1. Energy				
2. Industrial Processes				
3. Solvent and Other Product Use				
4. Agriculture				
5. Land Use, Land-Use Change and Forestry ⁽⁵⁾				
6. Waste				
7. Other				
Total (including LULUCF) ⁽⁵⁾				

⁽¹⁾ The column "Base year" should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the COP. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

- Parties should provide detailed explanations on emissions trends in Chapter 2: Trends in Greenhouse Gas Emissions and, as appropriate, in the corresponding Chapters 3 9 of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table.
- Use the documentation box to provide explanations if potential emissions are reported.

⁽²⁾ Fill in net emissions/removals as reported in table Summary 1.A. For the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).

⁽³⁾ Enter actual emissions estimates. If only potential emissions estimates are available, these should be reported in this table and an indication for this be provided in the documentation box. Only in these rows are the emissions expressed as CO₂ equivalent emissions.

⁽⁴⁾ In accordance with the UNFCCC reporting guidelines, HFC and PFC emissions should be reported for each relevant chemical. However, if it is not possible to report values for each chemical (i.e. mixtures, confidential data, lack of disaggregation), this row could be used for reporting aggregate figures for HFCs and PFCs, respectively. Note that the unit used for this row is Gg of CO₂ equivalent and that appropriate notation keys should be entered in the cells for the individual chemicals.

⁽⁵⁾ Includes net CO₂, CH₄ and N₂O from LULUCF.

المقرر ١٥/م أ-١١

القضايا المتعلقة بمنهجيات التعديل بموجب الفقرة ٢ من المادة ٥ من بروتو كول كيوتو

إن مؤتمر الأطراف،

إذ يشير إلى مقرريه ٢١/م أ-٧ و٢٠/م أ-٩،

وقد نظر في التوصيات ذات الصلة للهيئة الفرعية للمشورة العلمية والتكنولوجية فيما يتصل باستكمال الإرشادات التقنية المتعلقة بمنهجيات التعديل،

۱- يقرر إدراج الإرشادات التقنية بشأن منهجيات التعديل بموجب الفقرة ۲ من المادة ٥ من بروتوكول كيوتو السواردة في مرفق هذا المقرر في مرفق مشروع المقرر -/م أإ-١ (المادة ٥-٢) الملحق بالمقرر ٢١/م أ-٧(١)؛

7 يوصي مؤتمر الأطراف العامل بوصفه اجتماع الأطراف في بروتو كول كيوتو بالقيام، في دورته الأولى، باعتماد مشروع المقرر - أم أا- 1 (القضايا المتعلقة بمنهجيات التعديل بموجب الفقرة 1 من المادة 0 من بروتو كول كيوتو) أدناه (1)، ليحل محل مشروع المقرر - أم أا- 1 (الإرشادات التقنية المتعلقة بمنهجيات التعديل بموجب الفقرة 1 من المادة 0 من بروتو كول كيوتو) الملحق بالمقرر 1 أم أ- 0.

⁽۱) لم يورَد هنا المرفق المتضمن للإرشادات التقنية المتعلقة بمنهجيات التعديل بموجب الفقرة ٢ من المادة ٥ من المادة ٥ من بسروتوكول كيوتو. وبعد اعتماد المقرر ١٥/م أ-١١، أُدرجت الإرشادات التقنية (الواردة أصلاً في الوثيقة (FCCC/SBSTA/2005/4/Add.1) في مرفق مشروع المقرر الملحق بالمقرر ٢١/م أ-٧. واعتمد مؤتمر الأطراف العامل بوصفه احتماع الأطراف في بروتوكول كيوتو مشروع المقرر هذا باعتباره المقرر ٢٠/م أا-١ (FCCC/KP/CMP/2005/8/Add.3).

⁽٢) اعـــتمد مؤتمــر الأطراف العامل بوصفه اجتماع الأطراف في بروتوكول كيوتو مشروع المقرر هذا إلى (٢) الجتماع المقرر ١٦/م أإ-١ (FCCC/KP/CMP/2005/8/Add.3).

مشروع المقرر –/م أإ – ١

القضايا المتعلقة بمنهجيات التعديل بموجب الفقرة ٢ من المادة ٥ من بروتو كول كيوتو

إن مؤتمر الأطراف العامل بوصفه اجتماع الأطراف في بروتوكول كيوتو،

- ۱- يطلب أن يقوم خبراء الاستعراض الرئيسيون، وفقاً للتعريف الوارد في الفقرات من ٣٦ إلى ٤٢ من المبادئ التوجيهية للاستعراض بموجب المادة ٨ من بروتوكول كيوتو (المقرر ٣٣/م أ-٧)، بالنظر جماعياً في المسائل التالية، والتقدم بتوصيات بشأنها:
- (أ) سبل تحسين التطبيق المتسق الذي تجريه أفرقة خبراء الاستعراض للإرشادات التقنية بشأن منهجيات التعديل بموجب الفقرة ٢ من المادة ٥ من بروتوكول كيوتو، ولا سيما نهج ضمان التحفظ في التقديرات المعدلة؛
- (ب) توفير المعلومات وتحديثها بانتظام في موارد استعراض قوائم الجرد المدرجة في التذييل الأول للإرشادات التقنية؛
- (ج) سبل اتباع نهج مشترك في تطبيق أحكام الفقرة ٥٧ من الإرشادات التقنية وتحديد المرونة المتاحة لأفرقة خبراء الاستعراض في هذا المضمار، إذا اقتضت الضرورة ذلك؛
- (د) القيام، حسب الاقتضاء، قبل بدء الإبلاغ فيما يتعلق بفترة الالتزام وبعدها، كلما استلزم الأمر، بتحديث جداول عوامل التحفظ المدرجة في التذييل الثالث للإرشادات التقنية، يما في ذلك الهيكل والعناصر الأساسية لنطاقات عدم اليقين المشار إليها في تلك الجداول؟
- ٢- يطلب إلى الأمانة إدراج أية توصيات يخلص إليها خبراء الاستعراض الرئيسيون جماعياً في تقريرهم السنوي، المشار إليه في الفقرة ٤٠ من المبادئ التوجيهية للاستعراض المنصوص عليها في المادة ٨ من بروتوكول كيوتو، والمقدم إلى الهيئة الفرعية للمشورة العلمية والتكنولوجية كي تنظر فيه؛
- ٣- يطلب إلى الهيئة الفرعية للمشورة العلمية والتكنولوجية، بعد النظر في التقرير المشار إليه في الفقرة ٢ أعلاه، اتخاذ أية إجراءات مناسبة عملاً بتوصيات خبراء الاستعراض الرئيسيين المشار إليها في الفقرتين الفرعيتين (ج) و(د) من الفقرة ١ أعلاه؟
- ٤ يطلب إلى الأمانة القيام، بناءً على التوصية الجماعية لخبراء الاستعراض الرئيسيين، بالتحديث المنتظم للمعلومات الواردة في موارد استعراض قوائم الجرد المدرجة في التذييل الأول للإرشادات التقنية؛

٥ ــ يطلب إلى الأمانة حفظ وتصنيف المعلومات المتعلقة بالتعديلات الواردة في تقارير الاستعراض وما يتصل
 ٨٤ من معلومات، وإتاحتها وتيسير اطلاع أفرقة خبراء الاستعراض عليها؟

7 - g

الجلسة العامة الأولى ٢٨ تشرين الثاني/نوفمبر ٢٠٠٥
