^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Recalculations are reported to have taken place but actual recalculated values have not been provided.

^c For inventory year 2000 recalculations are reported for CO₂ emissions from industrial processes and N₂O emissions from agriculture, but there is no information on the impact on the total GHG emission estimates.

Table G.4

Reported recalculations for the base year and the latest year (%)

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

Energy

Figure 1.1

Emissions and contribution of subsectors in energy^a

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

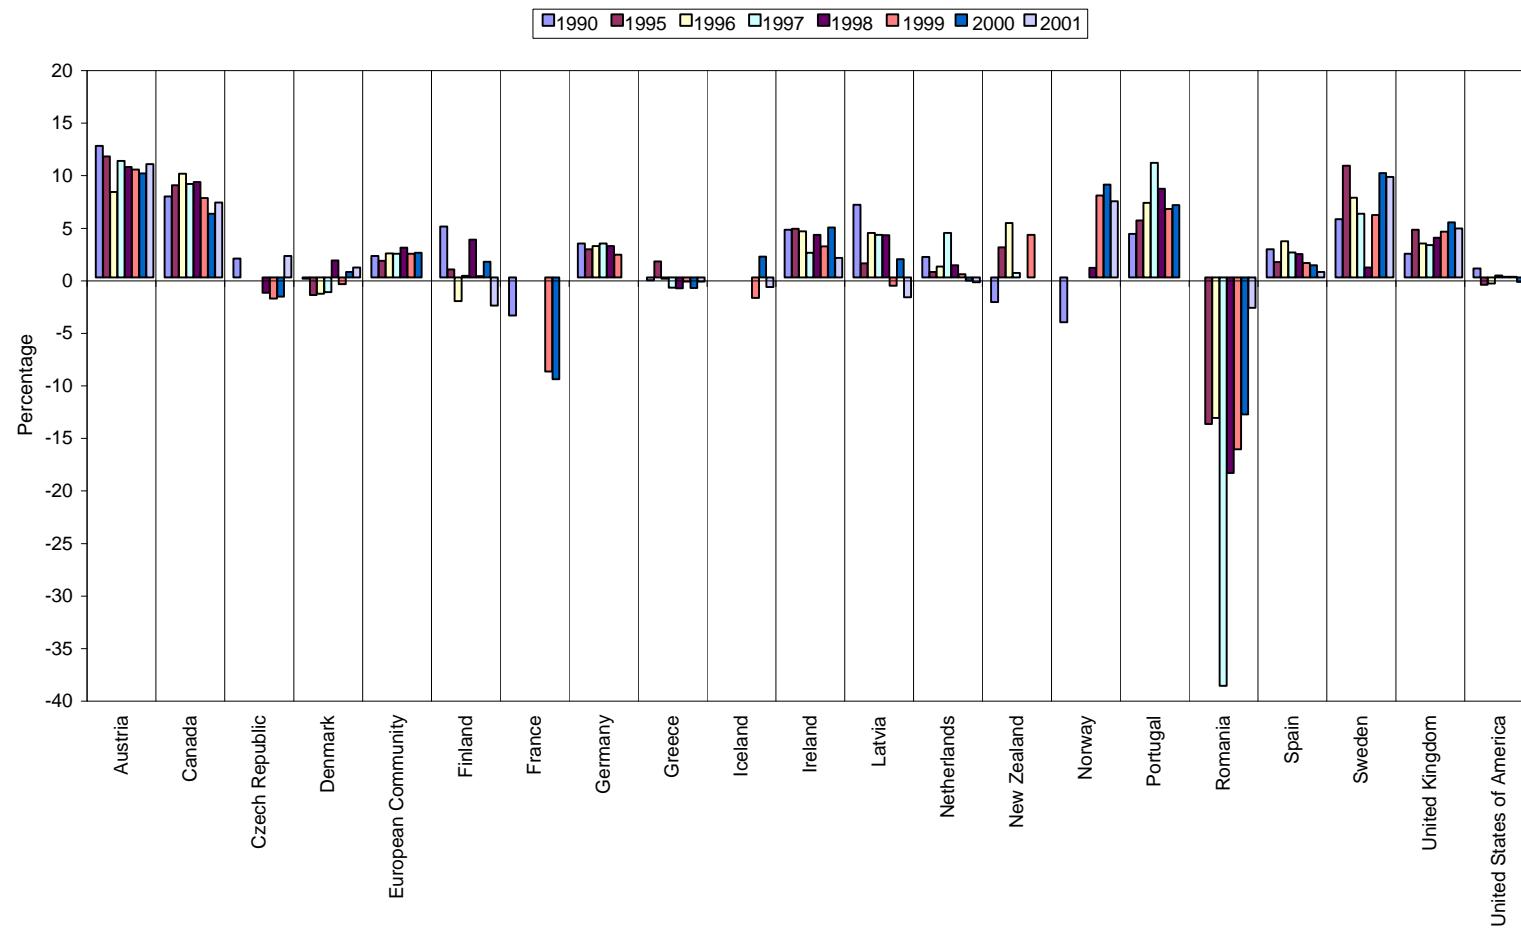

Table 1.1Total CO₂ emissions from the reference approach and the sectoral approach (2001)

| | Reference approach | Sectoral approach | Difference | Explanation of the differences as reported in table 1.A(c) of the CRF | |
|--------------------|--------------------|-------------------|------------|---|-----|
| | | | | (Gg CO ₂) | (%) |
| Austria | 61,661 | 55,672 | 10.8 | All fuels: Emissions of the cement industry are included in category 2A. Emissions of iron and steel industry are included in category 2C. Solid fuels: Energy consumption: National approach includes coke oven coke for blast furnaces whereas in the reference approach a share is considered as non-energy use blast furnaces. CO ₂ emissions: National approach does not separate between fuel related and non-fuel related CO ₂ emissions for metal production. All CO ₂ emissions are included in sector 2C: Metal production. Gaseous fuels: Energy consumption: National approach does not include losses and non-energy use. CO ₂ emissions: National approach uses sector specific carbon contents (different from IPCC reference factor). Emissions from natural gas consumption of cement industry and iron and steel industry are reported under category "2 Industrial Processes". Liquid fuels: Energy consumption: National approach does not include non-energy use and energy losses. CO ₂ emissions: Heat values and carbon contents are sector and fuel specific. The energy statistic is mass balanced only. Emissions from liquid fuels consumption of cement industry and iron and steel industry are reported under category "2 Industrial Processes". Other fuels: The national approach considers waste as an additional fuel type (e.g. municipal solid waste and industrial fuel waste). | |
| Belgium | 116,801 | 115,237 | 1.4 | | |
| Bulgaria | 46,331 | 44,917 | 3.1 | The discrepancy arises from the following sources: (I) The statistical difference between "apparent consumption" used in the reference approach and actual consumption used in the sectoral approach. (II) Not taking into account the losses during fuel transformation and the non-energy use of fuels in the sectoral approach. (III) Different emission factors applied in the sectoral approach for the different combustion technologies. (IV) The reference approach treats the non-energy use of fuels as if they were combusted. A correction is done by the carbon stored from non-energy fuel use, which is estimated from an approximate procedure which does not identify specific processes. | |
| Canada | 549,093 | 512,570 | 7.1 | For a complete discussion and reconciliation of the national and reference approaches, please consult the most recent copy of Canada's National Inventory Report (NIR) specifically, the section describing: Energy/Fuel Combustion/Memo Items/Reference Approach. | |
| Czech Republic | 124,730 | 122,246 | 2.0 | Regarding sectoral approach - when CO ₂ from 2C1 is added (2,524 Gg CO ₂), the total value for the Sectoral approach is 124,770 Gg CO ₂ (very close to the reference approach result). | |
| Denmark | 52,633 | 52,145 | 0.9 | Non-energy use of fuels is not included in the Danish national approach. Fuel consumption for non-energy (10.63 PJ) is subtracted in the reference approach to make results comparable. Inclusion of these fuels in future inventories will be considered. CO ₂ emission from plastic part of municipal wastes is included in the Danish national approach. CO ₂ emission from the plastic part of municipal wastes is added in reference approach. (Other fuels of sources 1A1, 1A2 and 1A4) | |
| Estonia | 16,033 | 16,728 | -4.2 | | |
| European Community | | 3,201,455 | | | |
| Finland | 58,860 | 60,492 | -2.7 | Secondary liquid fuels with notification "IE" are included in Other oil in Table 1.A(b). Anthracite is included in Other bituminous coal. All biomass fuels are included in Solid biomass. The relatively high difference in liquid fuels CO ₂ emissions is due to statistical differences in national oil balance. | |
| France | | 385,530 | | Anthracite is included with Other bituminous coal. Energy data relating to 2001 were not yet available when the CRF was elaborated. | |
| Germany | | 846,352 | | | |
| Greece | 97,330 | 97,718 | -0.4 | | |
| Iceland | 1,768 | 1,784 | -0.9 | | |
| Ireland | 44,144 | 43,348 | 1.8 | Liquid fuels.0.21 PJ in Cell D12 is LPG used in Road Transport and should be included in Cell D9 (Liquid Fuels); the remaining difference is due to "rounding" between the reference approach and national approach. Solid fuels.The difference between the reference approach and national approach is 0.38 PJ. This is due to 9 ktoe of milled peat used in the manufacture of peat briquettes, which is not included in the national approach. This will be included in future submissions. Gaseous fuels. 18,882 PJ of natural gas used as feedstock in the manufacture of ammonia is not included in the national approach and accounts for the total difference. | |
| Italy | 434,658 | 436,039 | -0.3 | | |
| Latvia | 7,316 | 7,457 | -1.9 | There is made more detailed research on fuel consumption for domestic ships and aviation. In the national approach is used energy balance made by expert but in Reference approach are used data from Statistical Bureau. | |
| Luxembourg | | 4,847 | | | |
| Netherlands | 175,904 | 176,715 | -0.5 | The energy consumption in the national approach is based on the data from the national inventory. These fuel data are not complete: 1) Not all CO ₂ emissions (from combustion) submitted by industry are accompanied by fuel data in the inventory; 2) In industry reports some of the CO ₂ emissions from combustion are allocated as process and thus the corresponding fuel data are not incorporated in the totals for the fuel data. 3) Industries may calculate and report actual CO ₂ emissions from energy used as chemical fusing different overall CO ₂ emission factors for the amount of energy carriers converted into products used in the reference approach for estimating non-reported feedstock emissions. 4) Industry firms report more heavy fuels used as chemical feedstock than the energy statistics used in the reference approach. The extent of these causes may differ from year to year, which then also cause situations in the difference between reference approach and national approach. In addition, the reference approach figures are calculated using preliminary values for the carbon content of crude oil and NGL. | |
| New Zealand | 29,205 | 28,980 | 0.8 | IE refers to the fact that the 'Other' energy consumption and CO ₂ emissions comprised LPG and fuel oil, which is included in row 9, under 'Liquid Fuels' reference approach figures (PJ) i.e. excluding coal, are verifiable via Ministry of Economic Development's 'Energy Data File' published every six months. The national approach data however, is more detailed, and are from the Ministry of Economic Development's greenhouse gas database. These figures are not reported elsewhere. Hence both approaches are credible, and we are looking into the matter of minimizing the % difference. | |
| Norway | 34,324 | 32,003 | 7.3 | | |

| Reference approach | Sectoral approach | Difference | Explanation of the differences as reported in table 1.A(c) of the CRF | | |
|--------------------|-------------------|------------|---|-----|--|
| | | | (Gg CO ₂) | (%) | |
| Poland | 303,672 | 307,110 | -1.1 | | |
| Portugal | | 58,991 | | | Difference between sectoral and reference approach (CO ₂ from fuel combustion): the sectoral approach CO ₂ estimates depend partially on combustion information from point sources, and the reference approach results from national energy balances. Furthermore, feedstock emissions were estimated differently in the two approaches: in the sectoral approach, emissions were estimated from production activity data; in the reference approach, a global percentage of carbon stored (e.g. lubricants, naphtha) was used. In the sectoral approach, emissions from lubricants may not have been totally estimated, because it is uncertain if road traffic emission factors take into account these materials. |
| Romania | 101,775 | 104,812 | -3.0 | | |
| Slovakia | 38,999 | 38,542 | 1.2 | | Sectoral approach is based on totally independent data collection than the reference approach. The difference in fuel consumption between these two approaches can be caused by: using average net calorific value in the reference approach and fuel specific net calorific value in the sectoral approach, not full coverage of fuel consumption in the sectoral approach (not appropriate reporting by sources). Slovakia is using the reference approach as national total emission estimate of CO ₂ , while consistent data series since 1990 exist only for the reference approach. |
| Spain | 282,913 | 281,468 | 0.5 | | |
| Sweden | 56,302 | 51,392 | 9.6 | | If energy consumption in 1B and 2 is taken into account, the difference in Energy consumption is 0.90% and the difference in CO ₂ emissions is 3.36% See comparision 1990–2001, in appendix 13 of the Swedish National Inventory Report, for further information. Note that cell D12 and E12 includes gasoline consumption. Gasoline is a liquid fuel, hence not included in B12 and C12. (Also the case other years) |
| Switzerland | 41,142 | 40,551 | 1.5 | | Differences in energy consumption: allocation problems: Only bitumen production from national refineries is shown in table 1.A(d). It is a refinery product and included in the crude oil amount. In the Swiss inventories bitumen emissions (NMVOC) appear under industrial processes and not under energy use. Gaseous fuels: gas distribution emissions (including emissions from compressor stations) are shown in table 1.B.1 and do not appear in the column "national approach". Liquid fuels/Solid fuels: in the national approach, petroleum coke is subsumed under solid fuels (cement industry use; there petroleum coke is treated as coal). |
| United Kingdom | 561,600 | 536,632 | 4.7 | | A significant proportion of fuel consumption emissions occurs in 1B1b Solid Fuel Transformation, 2C Metal Production, 2B1 Ammonia Production including these sources with 1A in the comparison reduces the discrepancy to 3.5 %. This discrepancy arises from three sources: (1) The statistical difference between 'apparent consumption' used in the reference inventory and actual consumption used in the sectoral inventory. This statistical difference results from losses and errors in the estimates. (2) The sectoral inventory includes emissions from the non-energy use of fuel where they can be specifically identified e.g. catalytic crackers, iron and steel, lubricants combustion and ammonia production. The reference approach implicitly treats the non-energy use of fuel as if it were combustion. A correction is then applied by deducting an estimate of carbon stored from non-energy fuel use. The carbon stored is estimated from an approximate procedure which does not identify specific processes. (3) The reference approach uses data on primary fuels such as crude oil and natural gas liquids which are then corrected for imports, exports and stock changes of secondary fuels. Thus the estimates obtained will be highly dependent on the default carbon contents used for the primary fuels. The sectoral approach is based wholly on the consumption of secondary fuels where the carbon contents are known with greater certainty. In particular the carbon contents and calorific values of the primary liquid fuels are likely to vary more than those of secondary fuels. |
| United States | 5,694,124 | 5,641,760 | 0.9 | | In order to accommodate the differences and limitations between the reference approach table of the CRF and that of the US Inventory, the following adaptations were made to table 1.A(b): 1) Orlimulsion values refer to US Inventory's "Other Liquids" which has production. The carbon stored subtracted in column P refers to "Pentanes Plus." 2) Field production of motor gasoline is included in column F with "Gasoline" Imports. 3) Naphtha values refer to "Naphtha for Petrofeed" and "Special Naphtha." 4) Refinery Feedstocks values refer to US Inventory's "Other Oil for Petrofeed" and "Still Gas." 5) Other Oil values refer to US Inventory's "Waxes," "Asphalt/Road Oil," "Misc. Products," and "US Terr. Misc. Products." 6) Other Bit. Coal includes US Inventory's "Bituminous Coal" and "Unspecified Coal." 7) US Territories consumption is included in the Imports column (applies to Natural Gas Liquids, Gasoline, Other Kerosene, Gas/Diesel Oil, Residual Fuel Oil, Lubricants, Other Oil, Other Bit. Coal, and Natural Gas). 8) Other includes waste combustion and geothermal emissions. Additional notes: 9) Table 1.A(b) - The United States reference approach is also provided in a separate Excel spreadsheet, which is more detailed than this table allows information to be reported. Specifically, the fuel types provided in the CRF tables differ from the fuel types as defined in the US, and no "other" options were offered in the CRF table. The US suggests revising the table to allow for additional fuel types. 10) "Other" reported above includes waste combustion, geothermal consumption, and adjustments to exclude petroleum coke for aluminum, ferroalloy, and titanium dioxide production; coking coal for iron and steel production; and natural gas for ammonia production. These fuels consumed as feedstocks are accounted for in the Industrial Processes section. The inclusion of waste combustion in this table gives higher totals for energy consumption and CO ₂ emissions in the CRF reference approach than in the US Inventory reference approach which does not include waste combustion. |

Figure 1.2

Differences in CO₂ emissions from reference and sectoral approach for 1990–2001 (%)^a

Note: Only Parties that provided data for three or more of the years in the selected period are included in the graph.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

Table 1.2**Emissions from stationary combustion – trend information****CO₂ emissions (Gg)**

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

Note: This table is provided for the purpose of completeness. Parties report emissions and activity data from different fuels under other fuels in the CRF and, consequently, the CO₂ IEFs may not be comparable.

^a Information on methods and emission factors included in this table is as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.1 Energy industries.

^b Information on methods and emission factors included in this table is as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.2 Manufacturing industries and construction.

^c Information on methods and emission factors included in this table is as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.4 Other sectors.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note: This table includes data from categories 1.A.1 Energy industries, 1.A.2 Manufacturing industries and construction, 1.A.4 Other sectors and 1.A.5 Other.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors included in this table is as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 1.A.3 Transport.

^b Source of default emission factors: IPCC Guidelines, volume 3, pages 1.70–1.83. For updates on the default emission factors for N₂O for US gasoline vehicles, see table 2.7, page 2.47 in the IPCC good practice guidance.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for all subcategories within the category 2.A Mineral products.

^b The CRF requests Parties to specify the activity data used (e.g. cement or clinker) for estimating the emissions from cement production. The descriptions included in this column are as reported in the CRF by Parties.

^c Cement production from the United Nations Industrial Commodity Production Statistics Database (as of 6 June 2003), United Nations, Department of Economic and Social Affairs, Statistics Division, United Nations, New York. Data are for the year 2001, except for Belgium and the United Kingdom for which data are for the year 2000.

^d As the United Nations data given in this table are for cement production, they are likely to differ from the CRF data specified as clinker. In instances where only 2000 data from the United Nations were available, no percentage comparisons with the CRF data for 2001 are given here.

^e Source of default emission factors: IPCC Guidelines, volume 3, pages 2.6.

^f Source of default emission factors: IPCC good practice guidance, pages 3.13 and 3.22.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 2.B Chemical industry.

^b As United Nations data for the year 2001 were not available for all Parties at the time of preparation of this synthesis and assessment report, for the comparisons of United Nations and CRF data in this table, data for the years 2001 and 2000 from the CRF are provided together with the respective United Nations data for 2001 or 2000.

^c Source of data: Industrial Commodity Production Statistics Database (as of 6 June 2003), Department of Economic and Social Affairs, Statistics Division, United Nations, New York. Data are for 2001, except for ammonia data are for 2000 for Iceland, and for nitric acid data are for 2000 for Bulgaria.

^d Source of default emission factors: ammonia; IPCC Guidelines, volume 3, page 2.16; nitric acid and adipic acid; IPCC good practice guidance, pages 3.34 and 3.44

^e Mass balance is indicated by MB.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method or type of emission factor used for all subcategories within the category 2.C Metal production.^b CO₂ emission estimates from sinter (2.C.1.3) were reported by only Poland; CO₂ emission estimates from coke (2.C.1.4) were reported by only Canada, Latvia, Sweden, the United Kingdom and the United States.^c As UN data for 2001 were not available for all Parties at the time of preparation of this synthesis and assessment report, for the comparisons of UN and CRF data in this table, data for the years 2001 and 2000 from the CRF are provided along with the respective UN data for 2001 and 2000.^d Source of data for crude steel: UN Industrial Commodity Production Statistics Database (as of 6 June 2003), Department of Economic and Social Affairs, Statistics Division, United Nations, New York.^e Source of data for pig iron: UN Industrial Commodity Production Statistics Database (as of 6 June 2003), Department of Economic and Social Affairs, Statistics Division, United Nations, New York.^f Source of data for aluminium: UN Industrial Commodity Production Statistics Database (as of 6 June 2003), Department of Economic and Social Affairs, Statistics Division, United Nations, New York. Data are for primary production, except for Denmark and Portugal where only total production data were available.^g Source of default emission factors: IPCC Guidelines, Volume 3, pages 2.28 and 2.33.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Note

IEF for SF₆ used in aluminium foundries is reported only by Germany. This category has therefore not been included in this table.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for PFCs for all subcategories within the category 2.C. Metal production.

^b Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for SF₆ for all subcategories within the category 2.C. Metal production.

^c As United Nations data for 2001 were not available for all Parties for the comparisons of United Nations and CRF data in this table, data for the years 2000 from the CRF are provided together with the respective United Nations data for 2000.

^d This column includes aluminium production data provided for CF₄ and C₂F₆ in tables 2 (II).C.E of the CRF.

^e Source of data for aluminium: United Nations Industrial Commodity Production Statistics Database (as of 6 June 2003), Department of Economic and Social Affairs, Statistics Division, United Nations, New York. Data are for primary production, except for Denmark and Portugal where only total production data were available.

^f Source of default emission factors: IPCC good practice guidance, page 3.44.

^g The default emission factor is 1 kg/t magnesium produced or smelted.

^g IPCC good practice guidance state that emissions equal consumption (IPCC good practice, page 3.48).

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method or type of emission factor used for HFCs, PFCs and SF₆ for all subcategories within the category 2.E. Production of halocarbons and SF₆.

^b An 'X' in this column indicates that an estimate of aggregated production of HCFCs for 2000 is available from the Secretariat of the Montreal Protocol. Usually HFC-23 occurs only during the production of HCFC-22.

^c Source of default emission factors: IPCC Guidelines, volume 3, page 2.35.

^d The United Kingdom reported aggregated HFC emissions from 2.E.1 Production and 2.E.2 Fugitive. Under that category, the activity data value was 31,311 t for 2000 and the implied emission factor was 9.23.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

Table 2.17 (continued)

Consumption of halocarbons and SF₆, PFCs and SF₆ (2001) (continued)

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method or type of emission factor used for all PFCs for all subcategories within the category 2.F.Consumption of halocarbons and SF₆.

b The Netherlands reported aggregated emissions of all PFCs for the industrial processes sector. They are reported as unspecified and not as c-C₆F₁₃.

^c The United Kingdom reported aggregated PFCs emissions for the industrial processes sector under fugitive emissions.

^d B. Potential emissions.

\hat{e} = Actual emissions

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties in table Summary 3 of the CRF. It may therefore not reflect the actual method or type of emission factor used for the various livestock types within the category ⁴ from 4.A Enteric fermentation.

^b Source of international statistics: FAO, <http://apps.fao.org/>; follow the link "Agriculture" and then the link "Live Animals".

^c Source of default emission factors: IPCC Guidelines, Volume 3, Tables 4–3 and 4–4 (pages 4.10–4.11).

^d For dairy and non-dairy cattle, IPCC default emission factors (in kg CH₄ / head/ yr) are provided by regions as shown below (see footnote c for source reference):

^e In the FAO statistics, Belgium and Luxembourg are aggregated.

| | North America | Western Europe | Eastern Europe | Oceania | Asia |
|------------------|---------------|----------------|----------------|---------|------|
| Dairy cattle | 118 | 100 | 81 | 68 | 56 |
| Non-dairy cattle | 47 | 48 | 56 | 53 | 44 |

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory

^a Information on methods and emission factors is included in this table as reported by Parties in table Summary 3 of the CRF. It may therefore not reflect the actual method or type of emission factor used for the various livestock types within the category CH₄ from 4.B Manure management.

^b Source of default emission factors: IPCC Guidelines, Volume 3, tables 4–5 and 4–6 (pages 4.12 to 4.13). Default emission factors are provided according to climate regions (cool, temperate, warm), as shown in box 1.

^a Information on methods and emission factors is included in this table as reported by Parties in table Summary 3 of the CRF. It may therefore not reflect the actual method or type of emission factor used for all subcategories within the category N₂O from 4.B Manure management.

^b Source of default emission factors: IPCC good practice guidance, table 4.12, page 4.43.

^c Source of default emission factors: IPCC Guidelines, Volume 3, table 4-22 (page 4.104).

^d Source of default N excretion rates: IPCC Guidelines, Volume 3, table 4-20 page 4.99. Default values are provided by regions as shown below:

^e The Czech Republic reported activity data for N excretion per AWMS in the unit t N/year instead of kg N/year as required in the CRF. The values for the N₂O IEF from the Czech Republic do therefore not correspond to the unit given in this table.

IPCC defaults:

| | North America | Western Europe | Eastern Europe | Oceania | Asia |
|------------------|---------------|----------------|----------------|---------|------|
| Dairy cattle | 100 | | 70 | 80 | 60 |
| Non-dairy cattle | 70 | | 50 | 60 | 40 |
| Sheep | 16 | 20 | 16 | 20 | 12 |
| Swine | | 20 | | 16 | |
| Poultry | | 0.6 | | | |

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties in table Summary 3 of the CRF. It may therefore not reflect the actual method or type of emission factor used for all subcategories within the category N₂O from 4.D Agricultural soils.^b Information on key sources and the percentage of national total refers to subcategory 4.D.1 Direct soil emissions, except for Belgium and the European Community, where the information refers to the entire category 4.D Agricultural soils.^c Source of default emission factors: IPCC Guidelines, Volume 3; table 4-18, page 4.89. (See also IPCC good practice guidance, table 4-17, page 4.60.) It should be noted that for the sub-sources N-fixing crops and crop residue the IPCC default emission factors are not directly comparable to the N₂O implied emission factors because of the use of different units; the unit of default emission factors is kg N₂O-N/kg N, while in the CRF the unit relates to the amount of dry biomass (kg N₂O-N/kg dry biomass).^d For cultivation of histosols the two default values refer to temperate and tropical, respectively. The values in parenthesis indicate the range. It should be noted that default emission factors for histosols have been updated from 5 to 8 and from 10 to 16 for temperate and tropical, respectively (table 4.17, page 4.60 of IPCC good practice guidance).^e Source of default emission factor: IPCC Guidelines, Volume 3, table 4-22, page 4.104 (Pasture range and paddock). See also IPCC good practice guidance, table 4.12, page 4.43.^f Source of default emission factor: IPCC Guidelines, Volume 3, table 4-23, page 4.105 (default emission factors for indirect emissions). See also IPCC good practice guidance, table 4.12, page 4.43.^g Norway indicated in the CRF that biological N-fixation is estimated to 8 Gg N/yr.^h Norway indicated in the CRF that the N amount in crop residues is assumed to be equal to the amount of N in all the yield (78,069 t in 2001).ⁱ Slovakia reported the IEF for N-fixing crops and crop residue in the unit kg N₂O-N/kg N.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for all subcategories within the category 6.A Solid waste disposal on land.

^b Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for all subcategories within the category 6.B Wastewater handling.

^c Information on methods and emission factors is included in this table as reported by Parties. It may not reflect the actual method used or type of emission factor for all subcategories within the category 6.C Waste incineration.

^d Population data are from HNP Stats (Health, Nutrition and Population), the World Bank.

^e Source of default emission factors: IPCC Guidelines, volume 3, page 6.28.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.

^a In accordance with decisions 9/CP.2 and 11/CP.4, some Parties with economies in transition use base years other than 1990: Bulgaria (1988), Poland (1988) and Romania (1989).

^b Data for the years prior to 2001 presented in this table are taken from the 2002, 2001 and/or 2000 submissions, as available, as the Party did not provide CRF tables for the entire time series in its 2003 inventory submission. Following information provided by the Party in table 8 of the CRF, no recalculations of this source category seem to have been undertaken for the inventory years prior to 2001 since the last inventory submission.
