

Scoping the NAP process using a sample NAP process

LEG regional training workshop on national adaptation plans (NAPs) for for African Lusophone and island States

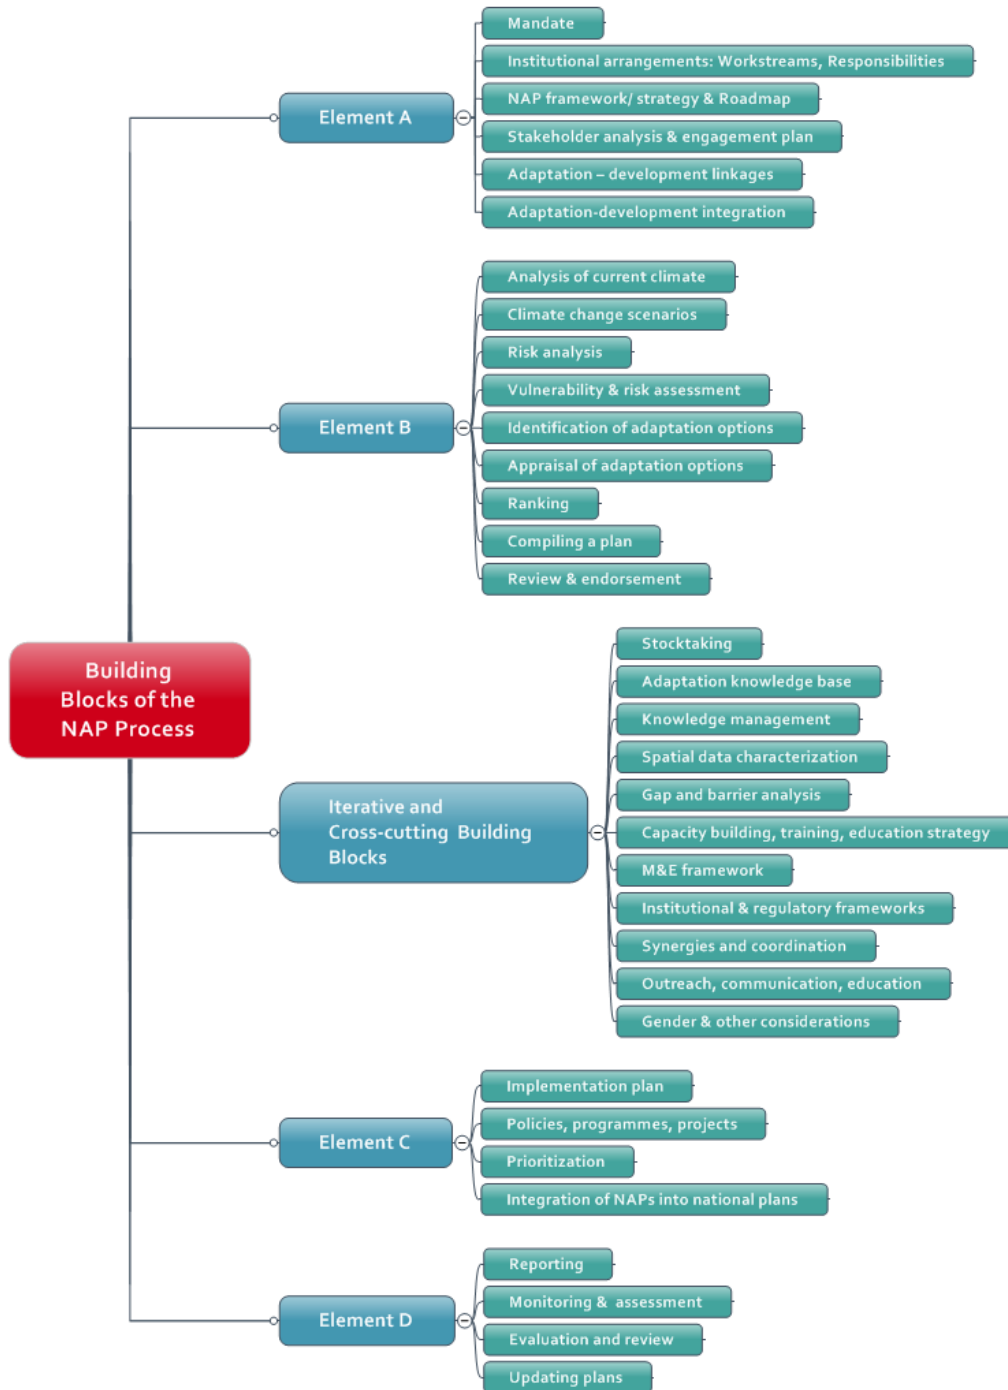

7 – 11 September 2015, Antananarivo, Madagascar

Scoping the NAP process

- The LEG, with input from other experts, have prepared a sample NAP process that shows the flow of information and outputs from one step to another for an indicative NAP process
- It includes activities and outputs that are common to adaptation plans of many countries.
- While the activities are shown sequentially, in reality they would be carried out in parallel and mainly on a continuous basis.
- An initial activity would then be to go through this sample NAP process to get a better understanding of what would be required, add any missing steps or outputs, then use this flow to conduct a **stocktaking** of what exists, in effect what identifying **gaps and needs** in terms of what is needed to carry out the NAP process
- The initial scoping establishes a baseline, and helps in assigning activities to different **workstreams** – teams of actors working on activities of the NAP process based on their mandate and functions

Sample Process to Formulate and Implement NAPs

Showing steps and their outputs (in blue) that act as inputs for subsequent steps

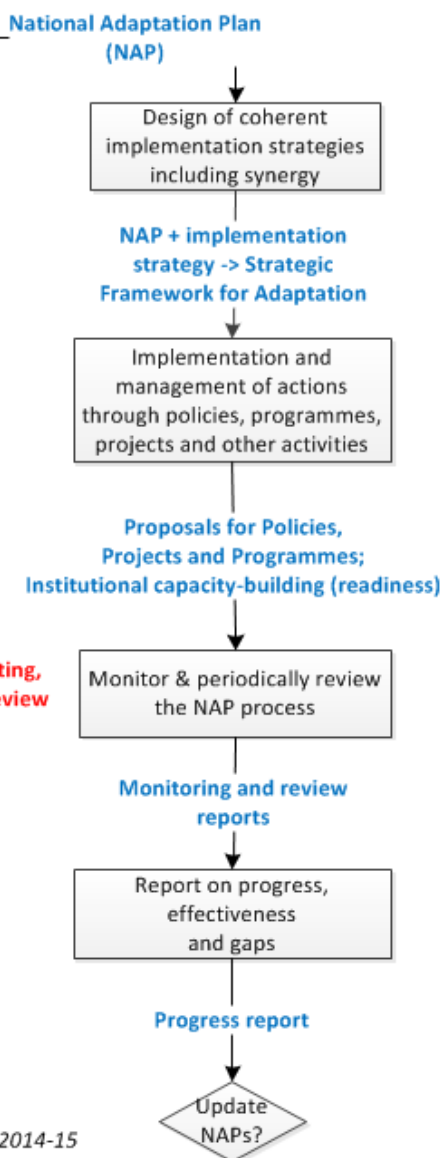

Element A: Lay the ground work and address gaps

Element B: Preparatory elements

Element C: Implementation strategies

Element D: Reporting, monitoring and review
