ABOUT THE GREEN GIRLS ORGANISATION

Green Girls

The only Pan-African Social Energy Enterprise that uses AI to identify the specific clean energy problems faced by women and girls in African rural communities and with the data collected provide the specific clean energy solutions through solar and biogas installations that provide electricity and clean cooking fuel.

We also equip these women and girls with eco-entrepreneurial skills on how to assemble solar lamps and sell and also how to collect, package and sell organic fertiliser which is an agricultural bi-product obtained from the biodigesters.
