

Lars J. Nilsson

Professor

Energy and Environmental Studies, Lund University, Sweden

Lars J. Nilsson has more than 25 years of experience in the fields of energy efficiency and renewable energy, energy and transport systems, as well as energy and climate policy analysis. Recent research has been on different aspects of low carbon transition policy strategies and governance in the context of multi-objective strategies for sustainable development. A topical field of research is low carbon transitions in industry and their co-evolution with energy system transitions in the perspective of green economy, industrial development and innovation policy strategies. He was a lead, contributing and SPM author in the 2011 IPCC Special Report on Renewable Energy Sources and Climate Change. He is currently coordinating the EU-H2020 project REINVENT (Realising Innovation in Transitions for Decarbonisation) where the approach is to study and understand transitions and emerging initiatives from within industrial sector contexts and where government climate policy is only one of many factors that shape perceptions and strategies. Lars is a member of the Scientific Advisory Board of the Wuppertal Institute and the City of Seoul International Energy Advisory Council.
