Development and transfer of technologies

UNFCCC Side event

What are the technology needs of developing countries?
An update on technology needs assessments.

> **Friday, 6 June 2014**
> **18:30 – 20:00**
> **Room Solar**

TNAs are a set of country-driven activities that identify and determine the mitigation and adaptation technology priorities of developing country Parties. They include technology action plans (TAPs) and project ideas, which are concrete actions for the implementation of the identified technologies. TNA and TAPs involve multiple stakeholders in a consultative process to identify the barriers to technology transfer, and measures to address these barriers through sectorial analyses.

This side event will provide information on the findings of the third synthesis report on technology needs identified by non-Annex I Parties, experiences and lessons learned from the Global TNA project, experiences with national TNA projects and country experiences by conducting, reporting and implementing TNAs.

AGENDA	
5 min	Introduction *Mr. Bert Van der Plas* Team Leader, Finance, Technology and Capacity Building Programme, UNFCCC secretariat
